Gentleman, who, tho' Deaf and Dumb, writes down any Stranger's name at first Sight; with their future Contingencies of Fortune.

Now Living

In *Exeter* Court over-against the *Savoy* in the
Strand.

Gentem quidem nullam video neque tam humanam atque doctam; neque tam immanem tamque barbaram, quae non significari futura et a quibusdam intelligi praedicique posse censeat.

Cicero de Divinatione, lib. x.

L O N D O N:

Printed for E. CURLL: And sold by W. MEARS and T. JAUNCY, without *Temple Bar*, W. MEADOWS in *Cornhill*, A. BETTESWORTH in *Pater-Noster-Row*. W. LEWIS in *Covent Garden* and W. GRAVES in *St. James's Street*.
M.DCC.XX. (Price 5s.)

TO THE
LADIES AND GENTLEMEN
OF
GREAT BRITAIN.

I AM not unacquainted, that, ever since this book was first promised by way of advertisement to the world, it was greedily coveted by a great many persons of airy tempers, for the same reason that it has been condemned by those of a more formal class, who thought it was calculated partly to introduce a great many new and diverting curiosities in the way of superstition, and partly to divulge the secret intrigues and amours of one part of the sex, to give the other part room to make favourite scandal the subject of their discourse; and so to make one half of the fair species very merry, over the blushes and the mortifications of the other half. But when they come to read the following sheets, they will find their expectations disappointed, but I hope I may say too, very agreeably disappointed. They will find a much more elegant entertainment than they expected. Instead of making them a bill of fare out of patchwork romances of polluting scandal, the good old gentleman who wrote the *Adventures of my Life*, has made it his business to treat them with a great variety of entertaining passages, which always terminate in morals that tend to the edification of all readers, of whatsoever sex, age, or profession. Instead of seducing

young, innocent, unwary minds into the vicious delight which is too often taken in reading the gay and bewitching chimeras of the cabalists, and in perusing the enticing fables of new-invented tricks of superstition, my ancient friend, the writer, strikes at the very root of these superstitions, and shows them how they may be satisfied in their several curiosities, by having recourse to me, who by the talent of the second-sight, which he so beautifully represents, how nature is so kind frequently to implant in the minds of men born in the same climate with myself, can tell you those things naturally, which when you try to learn yourselves, you either run the hazard of being imposed upon in your pockets by cheats, gipsies, and common fortune-tellers, or else of being imposed upon in a still worse way, in your most lasting welfare, by having recourse to conjurors or enchanters that deal in black arts, and involve all their consulters in one general partnership of their execrable guilt ; or, lastly, of imposing worst of all upon your own selves, by getting into an itch of practising and trying the little tricks of female superstition, which are often more officiously handed down by the tradition of credulous nurses and old women, from one generation to another, than the first principles of Christian doctrine, which it is their duty to instil early into little children. But I hope when this book comes to be pretty generally read among you ladies, as by your generous and numerous subscriptions I have good reason to expect, that it will afford a perfect remedy and a thorough cure to that distemper, which first took its rise from too great a growth of curiosity, and too large a stock of credulity nursed prejudicially up with you in your more tender and infant years.

Whatever young maid hereafter has an innocent but long-
ing desire to know who shall be her husband, and what time

she shall be married, will, I hope, when she has read the following sheets of a man that can set her right in the knowledge of those points, purely by possessing the gift of the second sight, sooner have recourse innocently to such a man than use unlawful means to acquire it, such as running to conjurors to have his figure shown in their enchanted glasses, or using any of those traditional superstitions, by which they may dream of their husbands, or cause visionary shapes of them to appear on such and such festival nights of the year; all which practices are not ordinarily wicked and impious, but downright diabolical. I hope that the next 29th of June, which is St. John Baptist's day, I shall not see the several pasture fields adjacent to this metropolis, especially that behind Montague House, thronged, as they were the last year, with well dressed young ladies crawling busily up and down upon their knees, as if they were a parcel of weeders, when all the business is to hunt superstitiously after a coal under the root of a plantain, to put under their heads that night, that they may dream who should be their husbands. In order to shame them out of this silly but guilty practice, I do intend to have some spies out on that day, that shall discover who they are, and what they have been about; and I here give notice to the public, that this ill-acted comedy, if it be acted at all this year, must begin according to the rule of their superstition, on that day precisely at the hour of twelve. And so much for the pretty weeders. But as you, ladies, have had several magical traditions delivered to you, which, if you put in exercise and practice, will be greatly prejudicial to your honour and your virtue, let me interpose my counsels, which will conduct you innocuously to the same end, which some ladies have laboured to arrive at by these impieties. Give me leave first to tell you, that though what you aim at may be arrived to by these means, yet these means make that a miserable

fortune which would have been a good one ; because, in order to know human things beforehand, you use preternatural mediums, which destroy the goodness of the courses, which nature herself was taking for you, and annexes to them diabolical influences, which commonly carry along with them fatalities in this world as well as the next. You will, therefore, give me your pardon likewise, ladies, if I relate some other of these practices, which bare relation of itself, after what I have said before, seems to me sufficient to explode them.

Another of the nurse's prescriptions is this : upon a St. Agnes's night, the 21st day of January, take a row of pins and pull out every one, one after another, saying a *Pater Noster*, or Our Father, sticking a pin in your sleeve, and you will dream of her you shall marry. Ben Johnson, in one of his masks, makes some mention of this :

And on Sweet Agnes' night
Please you with the promis'd sight,
Some of husbands, some of lovers,
Which an empty dream discovers.

Now what can be more infinitely profane than to use the prayer our Lord instituted in such a way ?

There is another prescription, which is as follows : You must lie in another county, and knit the left garter about the right-legged stocking, let the other garter and stocking alone, and as you rehearse these following verses, at every comma, knit a knot :—

This knot I knit,
To know the thing I know not yet,
That I may see
The man that shall my husband be ;
How he goes, and what he wears,
And what he does all days and years.

Accordingly in your dream you will see him : if a musician, with a lute or other instrument ; if a scholar, with a book, &c. Now I appeal to you, ladies, what a ridiculous prescription is this ? But yet as slight a thing as it is, it may be of great importance if it be brought about, because then it must be construed to be done by preternatural means, and then those words are nothing less than an application to the devil.

Mr. Aubrey, of the Royal Society, says, a gentlewoman, that he knew, confessed in his hearing that she used this method, and dreamt of her husband whom she had never seen. About two or three years after, as she was one Sunday at church, up pops a young Oxonian in the pulpit ; she cries out presently to her sister, this is the very face of the man I saw in my dream. Sir William Somes's lady did the like.

Another way is to charm the moon thus, as the old nurses give out, at the first appearance of the moon, after New-year's-day, some say any other new moon is as good, go out in the evening, and stand over the spars of a gate or stile, looking on the moon (here remark that in Yorkshire they kneel on a ground-fast stone) and say,

All hail to the moon, all hail to thee,
I prithee, good moon, reveal to me
This night who my husband shall be.

You must presently after go to bed. The aforesaid Mr. Aubrey knew two gentlewomen that did thus when they were young maids, and they had dreams of those that married them.

But a great many of the wittiest part of your sex laugh at these common superstitions ; but then they are apt to run into worse : they give themselves up to the reading of the

cabalistical systems of sylphs, and gnomes, and mandrakes, which are very wicked and delusive imaginations.

I would not have you imagine, ladies, that I impute these things as infirmities and frailties peculiar to your sex. No; men, and great men too, and scholars, and even statesmen, and princes themselves, have been tainted with superstitions, and where they infect the minds of such great personages, they make the deeper impression, according to the stronger and more manly ideas they have of them. Their greater degree of strength in the intellect only subjects them to greater weaknesses; such was even the great Paracelsus, the wonder and miracle of learning in the age wherein he lived, and such were all his followers, scholars, statesmen, divines, and princes, that are talismanists.

These talismans that Paracelsus pretends to owe to the excogitation and invention of honest art, seem to me to be of a very diabolical nature, and to owe their rise to being dedicated by the author to the heathen gods. Thus the cabalists pretending to a vast penetration into arts and sciences, though all their thoughts are chimeras and extravagancies, unless they be helped by preternatural means, say they have found out the several methods appropriated to the several planets. They have appropriated gold to the sun on the Sunday, silver to the moon on the Monday, iron to Mars on the Tuesday, quicksilver to Mercury on the Wednesday, tin to Jupiter on the Thursday, copper or brass to Venus on the Friday, and lead to Saturn on the Saturday. The methods they take in forming these talismans are too long to dwell upon here. But the properties which they pretend belong to them are, that the first talisman or seal of the sun will make a man beloved by all princes and potentates, and cause him to abound with all the riches his heart can wish

The second preserves travellers from danger, and is favourable to merchants, tradesmen, and workmen. The third carries destruction to any place where it is put: and it is said that a certain great minister of state ordered one of these to be carried into England in the times of the revolution of government caused by Oliver Cromwell. The fourth they pretend cures fevers and other diseases; and if it be put under the bolster, it makes the proprietor have true dreams, in which he sees all he desires to know. The fifth, according to them, renders a man lucky and fortunate in all his businesses and undertakings. It dissipates melancholy, drives away all importunate cares, and banishes panic fears from the mind. The sixth, by being put into the liquor which any one drinks, reconciles mortal enemies, makes them intimate friends: it gains the love of all women, and renders the proprietor very dexterous in the art of music. The seventh makes women be easily brought to bed without pain; and if a horseman carries it in his left boot, himself and his horse become invulnerable.

This, Paracelsus and his learned followers say, is owing to the influence of the stars; but I cannot help arguing these acts of diabolical impiety. But as these arts are rarely known among the middling part of mankind, I shall neither open their mysteries, nor inveigh against them any farther.

The persons who are most to be avoided are your ordinary fortune-telling women and men about this town, whose houses ought to be avoided as a plague or a pestilence, either because they are cheats and impostors, or because they deal with black arts, none of them that I know having any pretensions to the gift of a second-sight. Among many, a few of the most notorious that I can call to mind now, are as follow. The first and chiefest of these mischievous fortune-tellers is a

woman that does not live far from the Old Bailey. And truly the justice hall in that place is the properest place for her to appear at, where, if she was tried for pretending to give charms written upon paper with odd scrawls, which she calls figures, she would be probably convicted, and very justly condemned, and doomed to have her last journey from the Old Bailey to Newgate, and from Newgate to Tyburn. The other is a fellow that lives in Moorfields, in which place those who go to consult him ought to live all their lifetimes, at the famous palaces of the senseless men: he is the successor of the famous Dr. Trotter, whose widow he married; and from being a tailor and patching men's garments, he now cuts flourishes with his shears upon parchment, considers the heavens as a garment, and from the spangles thereupon he calculates nativities, and sets up for a very profound astrologer. The third is an ignorant fellow that caws out strange predictions in Crow-alley, of whose croaking noise I shall here take no notice, he having been sufficiently mauled in the most ingenious Spectators. These and such counterfeits as these, I would desire all gentlemen and ladies to avoid. The only two really learned men that I ever knew in the art of astrology, were my good friends Dr. Williams and Mr. Gadbury; and I thought it necessary to pay this esteem to their names, let the world judge of them what it will. I will here say no more, nor hinder you any longer, gentlemen and ladies, from the diversion which my good old friend, who is now departed this life, has prepared for you in his book, which a young gentleman of my acquaintance revised, and only subscribe myself,

Yours, &c.,

DUNCAN CAMPBELL.

THE
HISTORY OF THE LIFE
AND SURPRISING ADVENTURES
OF
MR. DUNCAN CAMPBELL.

THE INTRODUCTION.

OF all the writings delivered in an historical manner to the world, none certainly were ever held in greater esteem than those which give us the lives of distinguished private men at full length; and, as I may say, to the life. Such curious fragments of biography are the rarities which great men seek after with eager industry, and when found, prize them as the chief jewels and ornaments that enrich their libraries, and deservedly; for they are the beauties of the greatest men's lives handed down by way of example or instruction to posterity, and commonly handed down likewise by the greatest men. Since, therefore, persons distinguished for merit in one kind or other are the constant subjects of such discourses, and the most elegant writers of each age have been usually the only authors who choose upon such subjects to employ their pens, and since persons of the highest rank and dignity, and genii of the most refined and delicate relish, are frequently curious enough to be the readers of them, and to esteem them the most valuable pieces in a whole collection of learned works; it is a wonder to me that when any man's life has something in it peculiarly great and remarkable in its kind, it should not move some more skilful writer than

myself to give the public a taste of it, because it must be at least vastly entertaining, if it be not, which is next to impossible, immensely instructive and profitable withal.

If ever the life of any man under the sun was remarkable, this Mr. Duncan Campbell's, which I am going to treat upon, is so to a very eminent degree.

It affords such variety of incidents, and is accompanied with such diversity of circumstances, that it includes within it what must yield entire satisfaction to the most learned, and admiration to persons of a moderate understanding. The prince and the peasant will have their several ends of worthy delight in reading it; and Mr. Campbell's life is of that extent, that it concerns and collects, as I may say, within itself, every station of life in the universe. Besides, there is a demand in almost every page that relates any new act of his, for the finest and closest disquisitions that learning can make upon human nature, to account how those acts could be done by him. For he daily practised, and still practises, those things naturally, which puts art to the rack to find out how nature can so operate in him; and his fleshly body, by these operations, is a living practical system, or body of new philosophy, which exceeds even all those that have hitherto been compounded by the labour and art of many ages.

If one that had speculated deep into abstruse matters, and made it his study not only to know how to assign natural reasons for some strange new acts that looked like miracles by being peculiar to the individual genius of some particular admired man, but carrying his inquiry to a much greater height, had speculated likewise what might possibly be achieved by human genius in the full perfection of nature, and had laid it down as a thesis by strong arguments, that such things might be compassed by a human genius, if in its true degree of perfection, as are the hourly operations of the person's life I am writing, he would have been counted a wild romantic enthusiast, instead of a natural philosopher. Some of the wisest would be infidels to so new and so refined a scheme of thinking, and demand experiment, or cry it was all against reason, and would not allow the least tittle to be true without it. Yet the man that had found out so great a mystery as to tell us what might be done by human genius, as it is here actually done, would have been a great man within himself; but wanting further experimental proof,

could lay no claim to the belief of others, or consequently to their esteem. But how great, then, is the man who makes it constantly his practice actually to do what would not otherwise have been thought to be of such a nature as might ever be acquired by mortal capacity, though in its full complement of all possible perfection? He is not only great within himself, he is great to the world: his experiments force our belief, and the amazing singularity of those experiments provokes both our wonder and esteem.

If any learned man should have advanced this proposition, that mere human art could give to the deaf man what should be equal to his hearing, and to the dumb man an equivalent for his want of speech, so that he could converse as freely almost as other hearing or talking persons; that he might, though born deaf, be by art taught how to read, write, and understand any language, as well as students that have their hearing, would not the world, and many even of the learned part of it, say that nothing could be more extravagantly wild, more mad and frantic? The learned Dr. Wallis, geometry professor of Oxford, did first of all lay down this proposition, and was counted by many to have overshot the point of learning, and to have been the author of a whimsical thesis. And I should not have wondered if, after a man's having asserted this might be done, before it was actually done, some blind devout people in those days, had accused him of heresy, and of attributing to men a power of working miracles. The notion of the antipodes was by the most learned men of the age in which St. Augustin lived, and by the great St. Austin himself, treated in no milder a manner: yet if the ability of teaching the deaf and the dumb a language proved a truth in experience afterwards, ought not those to turn their contempt into admiration, ought not those very people to vote him into the Royal Society for laying down the proposition, who, before it proved true, in fact, would have been very forward to have sent him to Bedlam? The first instance of this accomplishment in a dumb person was proved before King Charles II. by this same Dr. Wallis, who was a fellow of the Royal Society, and one of the most ingenious of that society.

But, notwithstanding this, should I come afterwards and say, that there is now living a deaf and dumb man, and born so, who could by dint of his own genius teach all others deaf

and dumb to read, write, and converse with the talking and hearing part of mankind, some would, I warrant, very religiously conclude, that I was about to introduce some strange new miracle-monger and impostor into the world, with a design of setting up some new sect of anti-christianism, as formidable as that of Brachmans. Should I proceed still further, and say, that this same person, so deaf and dumb, might be able also to show a presaging power, or kind of prophetic genius, (if I may be allowed to use the expression,) by telling any strange persons he never saw before in his life, their names in writing, and by telling them the past actions of their lives, and predicting to them determined truths of future contingencies, notwithstanding what divines say, that "in futuris contingatibus non datur determinata veritas," would not they conclude that I was going to usher in a new Mahomet? Since, therefore, there does exist such a man in London, who actually is deaf and dumb, and was born so, who does write and read, and converse as well as anybody, who teaches others deaf and dumb to write, and read and converse with anybody, who likewise can, by a presaging gift, set down in writing the name of any stranger at first sight, tell him his past actions, and predict his future occurrences in fortune, and since he has practised this talent as a profession with great success for a long series of years upon innumerable persons in every state and vocation in life, from the peeress to the waiting-woman, and from the lady mayoress to the milliner and sempstress, will it not be wonderfully entertaining to give the world a perfect history of this so singular a man's life? And while we are relating the pleasant adventures with such prodigious variety, can anything be more agreeably instructive in a new way than to intersperse the reasons, and account for the manner how nature, having a mind to be remarkable, performs by him acts so mysterious.

I have premised this introduction, compounded of the merry and the serious, with the hopes of engaging many curious people of all sorts to be my readers, even from the airy niece peruser of novels and romances, neatly bound and finely gilt, to the grave philosopher, that is daily thumbing over the musty and tattered pieces of more solid antiquity. I have all the wonders to tell that such a merry kind of a prophet has told, to entertain the fancies of the first gay tribe, by which means I may entice them into some solid knowledge and

judgment of human nature; and I have several solid disquisitions of learning to make, accounting for the manner of these mysterious operations, never touched upon before in due form and order by the hands of the ancient or modern sages, that I may bribe the judgment of this last grave class, so far as to endure the intermixing entertainment with their severer studies.

CHAPTER I.

MR. CAMPBELL'S DESCENT, FAMILY, BIRTH, ETC.

OF the goodness and antiquity of the name and family of this gentleman, nobody can ever make any question. He is a Campbell, lineally descended from the house of Argyll, and bears a distant relation to the present duke of that name in Scotland, and who is now constituted a duke of England, by the style and title of Duke of Greenwich.

It happens frequently that the birth of extraordinary persons is so long disputed by different people, each claiming him for their own, that the real place where he first took breath grows at last dubious. And thus it fares with the person who is the subject of the following sheets; as, therefore, it is my proposal to have a strict regard to historical faith, so I am obliged to tell the reader that I can with no certainty give an account of him till after he was three years old; from which age I knew him, even to this day; I will answer for the truths which I impart to the public during that time, and as for his birth and the circumstances of it, and how the first three years of his life passed, I can only deliver them the same account I have received from others, and leave them to their own judgments whether it ought to be deemed real or fabulous.

The father of our Mr. Duncan Campbell, as these relate the story, was from his infancy of a very curious, inquisitive nature, and of an enterprising genius, and if he heard of anything surprising to be seen, the difficulty in practice was enough to recommend to him the attempting to get a sight of it at any rate or any hazard. It is certain, that during some civil broils and troubles in Scotland, the grandfather of our Mr. Campbell was driven with his wife and family, by the fate of war, into the isle of Shetland, where he lived many years; and during his residence there, Mr. Archibald Campbell, the father of our Duncan Campbell, was born.

Shetland lies north-east from Orkney, between sixty and sixty-one degrees of latitude. The largest isle of Shetland, by the natives called the Mainland, is sixty miles in length from south-west to the north-east, and from sixteen, to one mile, in breadth.

The people who live in the smaller isles have abundance of eggs and fowl, which contributes to maintain their families during the summer.

The ordinary folks are mostly very nimble and active in climbing the rocks in quest of those eggs and fowl. This exercise is far more diverting than hunting and hawking among us, and would certainly for the pleasure of it, be followed by people of greater distinction, was it not attended with very great dangers, sufficient to turn sport into sorrow, and which have often proved fatal to those who too eagerly pursue their game. Mr. Archibald Campbell, however, delighted extremely in this way of fowling, and used to condescend to mix with the common people for company, because none of the youths of his rank and condition were venturesome enough to go along with him.

The most remarkable experiment of this sort, is at the isle called the Noss of Brassah: the Noss standing at sixteen fathoms distance from the side of the opposite main: the higher and lower rocks have two stakes fastened in each of them, and to these there are ropes tied; upon the ropes there is an engine hung which they call a cradle, and in this a man makes his way over from the greater to the smaller rocks, where he makes a considerable purchase of eggs and fowl; but his return being by an ascent, makes it the more dangerous, though those on the great rock have a rope tied to the cradle, by which they draw it and the man safe over for the most part. Over this rock Mr. Archibald Campbell and five others were in that manner let down by cradles and ropes; but before they could be all drawn back again, it grew dark, and their associates not daring to be benighted, were forced to withdraw, and Mr. Campbell was the unfortunate person left behind, having wandered too far, and not minded how the day declined, being intent on his game. He passed that night, you may easily guess, without much sleep, and with great anxiety of heart. The night, too, as he lay in the open air, was, to add to his misfortunes, as boisterous and tempestuous as his own mind; but in the end the tempest proved very happy for him. The reader is to understand that the Hamburgers, Bremeners, and Hollanders, carry on a great fish trade there. Accordingly, a Holland vessel, that was just coming in the sound of Brassah, was by this tempest driven into a creek of the rock, which nature had made

into a harbour, and they were providentially saved from the bottom of the sea by a rock, from which, humanly speaking, they could expect nothing but destruction, and being sent to the bottom of that sea. As never could a man be taken hold of with so sudden and surprising a disaster, so nobody could meet with a more sudden and surprising relief than Mr. Campbell found when he saw a ship so near. He made to the vessel, and begged the Hollanders to take him in; they asked him what he would give them, or, said the barbarous sailors, we will even leave you where you are; he told them his disaster, but they asked money, and nothing else would move them: as he knew them a self-interested people, he bethought himself, that if he should tell them of the plenty of fowls and eggs they would get there, he might not only be taken in a passenger, but made a partner in the money arising from the stock; it succeeded accordingly: when he proposed it, the whole crew were all at work, and, in four hours, pretty well stored the vessel, and then, returning on board, set sail for Holland. They offered Mr. Campbell to put him in at his own island; but having a mind to see Holland, and being a partner, to learn their way of merchandize, which he thought he might turn to his countrymen's advantage, he told them he would go the voyage out with them, and see the country of those who were his deliverers; a necessary way of speech, when one has a design to sooth barbarians, who, but for interest, would have left him unredeemed, and, for aught they knew, a perpetual sole inhabitant of a dreadful rock, encompassed round with precipices, some three hundred fathoms high. Not so the islanders, who are wrongly called a savage set of mortals; no, they came in quest of him after so bitter a night, not doubting to find him, but fearing to find him in a lamentable condition; they hunted and ransacked every little hole and corner in the rock, but all in vain. In one place they saw a great slaughter of fowls, enough to serve forty families for a week; and then they guessed, though they had not the ill fortune to meet the eagles frequently noted to hover about those isles, that they might have devoured part of him on some precipice of the rock, and dropped the remnant into the sea. Night came upon them, and they were afraid of falling into the same disaster they went to relieve Mr. Campbell from. They returned each to their proper basket, and were drawn up

safe by their respective friends, who were amazed that one basket was drawn up empty which was let down for Mr. Campbell, and that there was not the least intelligence to be had concerning him, but the suppositious story of his having been devoured by eagles. The story was told at home; and with the lamentation of the whole family, and all his friends, he was looked upon to be murdered or dead.

Return we now to Mr. Archibald Campbell, still alive, and on board the Holland vessel; secure, as he thought within himself that, from the delivery he lately had by the gift of Providence, he was not intended to be liable to any more misfortunes and dangers of life, in the compass of so small a voyage. But his lot was placed otherwise in the book of fate, than he too fondly imagined: his time of happiness was dated some pages lower down, and more rubs and difficulties were to be encountered with, before his stars intended to lead him to the port of felicity. Just as he arrived within sight of Amsterdam, a terrible storm arose, and, in danger of their lives, for many hours, they weathered out the tempest; and a calm promising fair afresh, they made to the coast of Zealand; but a new hurricane prevented the ship from coming there also; and after having lost their masts and rigging, they were driven into Lapland. There they went ashore in order to careen and repair their ship, and take in provisions; while the ship was repairing by the Dutch, our islander made merry with the inhabitants, being the most inclined to their superstitious customs; he there became acquainted with a very beautiful woman, who fell in love with him, and after a very short space of time he married her. About the time when the ship departed, his wife, who was very rich, was big with child of a son, namely, Mr. Duncan Campbell. He wrote a letter by the master of the vessel to his parents in Shetland, concerning the various adventures he had met with, which was delivered the June following, about the time of fishing, to his parents, and several persons had copies thereof, and, for aught I know, some retain them to this very day; sure I am that many remember the particulars of this surprising affair, who are now living in that island.

The letter being very remarkable and singular in all its circumstances, I shall present it to the reader word for word, as it was given into my hands, together with some others

which he wrote afterwards, in all which I am assured by very credible persons, and undoubted authorities, there are not the least alterations, but what the version of it from the then Scotch manner of expression into a more modern English dress, made absolutely necessary.

MY DEAREST FATHER,

The same odd variety of accident, which put it out of my power to be personally present with you for so long a time, put it likewise out of my power to write to you. At last fortune has so ordered it, that I can send a letter to you before I can come myself, and it is written expressly to tell you the adventures I have met with, which have detained me this tedious space of time from my dear father, and because the same captain of a ship that brings you this, might as easily have brought your son to speak for himself. I shall in the next place lay before you the necessity there is for my stay a little longer among the strange natives of the country where I now inhabit, and where I am, in a manner, become naturalized.

You have, no doubt of it, been informed by my companions, some of whom I hope got safe back again, if not all, that I was lost, where many a brave man has perished before me, by going over the high precipices of the mountain Brassah, in a basket, sliding down by a rope. I must suppose I have given you the anguish of a father for a son, who you thought had lost his life by such a foolhardy attempt, and I implore your pardon with all the power of filial contrition, penitence, and duty. You have always showed me such singular marks of paternal affection, that I know your receipt of this letter will fill your heart with joy, and cause you to sign me an absolution and free pardon for all the errors I have committed, and think the sufferings I have undergone for my rashness and indiscretion, a sufficient atonement for my crime of making you by my undutifulness, a partner of my sorrows. To free you the more from this uneasiness, I know I need only tell you, that every grief of mine is gone excepting one, which is, that I must still lose the pleasure of seeing you a little longer. There was never surely a more bitter night than that which must by me be for ever remembered, when I was lost in the mountain of Brassah, where I must, for aught I know, have lived for ever a wild single inhabitant, but that the storm

which made the night so uneasy to me, rendered the first approach of daylight, beyond measure delightful. The first providential glimpse of the morning gave me a view of a ship driven by the tempest into a creek of the rock, that was by nature formed like a harbour; a miraculous security of deliverance, as I thought, both for the ship's crew and myself. I made all the haste I could, you may be sure, to them, and I found them to be Dutchmen that were come for fish; but in lieu of fish I instructed them to load it with eggs and fowl, which we compassed very happily in a short space of time, and I was to be a sharer with the captain in the lading, and bargained to go for Holland, to see the sale, and nature of the traffic; but when we were at sea, after much bad weather, we made towards Zealand, but we were driven upon the coast of Finland by a new storm, and thence into Lapland, where I now am, and from whence I send you this letter.

I could not come into a place so properly named for my reception; as I had been undutiful to you, and fortune seemed to make me an exile, or a banished man, by way of punishment for the vices of my youth; so Lapland (which is a word originally derived from the Finland word *lappi*, that is, exiles, and from the Sweden word *lap*, signifying banished, from which two kingdoms most of our inhabitants were banished hither, for not embracing the Christian religion), was certainly the properest country in the world to receive me.

When first I entered this country, I thought I was got into quite another world; the men are all of them pigmies to our tall, brawny Highlanders; they are, generally speaking, not above three cubits high, insomuch that though the whole country of Lapland is immensely large, and I have heard it reckoned by the inhabitants to be above a hundred German leagues in length, and fourscore and ten in breadth, yet I was the tallest man there, and looked upon as a giant. The district in which I live now, is called Uma Lapmark. You must understand, sir, that when I landed at North Cape, in Kimi Lapmark, another district of Lapland, there was at that time a most beautiful lady come to see a sick relation of her father's, who was prefect, or governor of Uma Lapmark, which is a post of great distinction. This lady, by being frequently in the company of French merchants, who traffic now and then in that province of Uma Lapmark, understood French, and having heard of a man six foot and a half high,

desired to see me, and when I came, she happened mightily to like my person; and she talked French, which when I answered, she made great signs of joy, that she could communicate her sentiments to me, and she told me who she was, how rich, and that not one in the company besides could understand a syllable we said, and so I might speak my mind freely to her; she told me the customs of the country, that it was divided into cantons, like our shires, and those cantons into rekars, or certain grounds allotted to families, that are just like our clans. As she was beyond measure beautiful, she was extremely good humoured, a thing rarely to be met among Lapland women, of a better stature than her country women, and very rich, and of good birth: I thought it would be a prodigious turn of fortune, for a man in my circumstances, if I could make any progress in her heart, which she seemed a little to open to me, in such a manner, for the beginning, as if such a successful event, if managed with prudence, might not be despaired off. Souls that are generous are apt to love, and compassion is the best introducer of love into a generous bosom, and that was the best stock I had to go upon in my courtship! I told her of all my calamities, my dangers, and my escapes; the goodness of my birth, as being allied to one of the greatest nobles in our island; and still she would ask me to tell it her over again, though every time I told it, just at such and such passages, she was forced to drop the tears from her eyes. In fine, I grew more in love with her, more out of a sense of gratitude now, than by the power of her charms before; the matter in a few days went so far, that she owned to me I had her heart. As to marriage, I did not then know the custom of the nation; I thought that if it proved only dangerous to me, I loved her so well that I intended to marry her, though the law was to pronounce me dead for it; but I did not know whether it might not be perilous for her too, to engage in such a state with me, and I resolved in that case, rather to be singly unhappy, than to involve her in distress, and make her the fair companion of my woes. I would not tell her so, for fear she should out of love hide from me those dangers, and therefore using a kind sort of dissimulation, I conjured her to tell me the laws and customs of marriages in that country to a tittle, and that nothing should hinder us from happiness. She told me exactly, as I

find since. Our marriage, said she, will be very hard to compass; provided we follow the strict rule of the country. For our women here, are bound not to see the man who makes their addresses to them, in some time. His way of courtship is to come to the parents, and his nearest friends and relations must make her father presents, and supplicate him like a king, to grant him his daughter. The courtship often lasts two or three years, and sometimes has not its effect at last; but if it has, the woman is dragged by her father and brother to church, as unwilling to go to be married, which is looked upon as a greater part of modesty in her, according to the greater disinclination she shows. My father and brother, said she, will both be against it; you have no relations in this country to move your suit, I cannot be so hypocritical as to be dragged unwillingly to him I own I desire for my lawful husband, and therefore, as I have an inclination to you, and I dare own I have, I will not follow those methods which I disapprove. I have talked with several Swedes, and several polite Frenchmen, about their manner of espousals, and I am told, that when souls are naturally united by affection, the couple so mutually and reciprocally loving, though they had rather have their parents' leave if likely to be got, yet, unwilling to be disappointed, only go to the next minister's and marry for better for worse. This way I approve of, for where two persons naturally love each other, the rest is nothing but a modest restraint to their wishes, and since it is only custom, my own reason teaches me there is no error committed, nor any harm done in breaking through it upon so commendable an occasion. I have, added she, a thousand rein deer belonging to me, beyond my father's power of taking away, and a third share in a rekar or clan, that is ten leagues in compass, in the byar or canton of Uma Lapmark. This is at my own disposal, and it is all your own, if you please to accept of it with me. Our women are very coy, when they are courted, though they have never so much an inclination to their suitor; but good reason and the commerce I have had with persons of politer nations than ours is, teach me that this proceeds entirely from vanity and affectation, and the greatest proof of a woman's modesty, chastity, and sincerity, certainly consists, contrary to the general corrupted opinion, in yielding up herself into the arms of the man she loves. For she that can dally with

a heart she prizes, can give away her heart, when she is once balked, to any man, even though she dislikes him. You must judge, my dear father, I must be touched with a woman that was exceeding beautiful, beyond any of her nation, and who had thoughts as beautiful as her person. I therefore was all in rapture, and longed for the matrimony, but still loved her enough to propose the question, I resolved, to her, viz., if it would not be in her nation accounted a clandestine marriage, and prove of great damage to her.

To this she answered with all the wisdom which could be expected from a woman who had given such eminent tokens of her judgment on other points, amidst a nation so barbarous in its manners, and so corrupt in its principles, as Lapland is. I am, said she, answerable to my father, for nothing by our laws, having no portion of him, but only what was presented me by my relations at my birth, according to custom, in lands and rein-deer. My father is but deputy governor; it is a Swede who is the governer of Uma; and if I pay to him at every mart and fair the due tribute, which must either consist of fifty rein-deer or one hundred and fifty rixdollars, he will have the priest that marries us present at the court of justice, according to our custom, and keep us in possession of our rights, that we may be enabled to pay tribute to the crown of Sweden. Indeed, before the abolition of the Birkarti, which were our native judges, we could not have married thus without danger to us both; but now there is none at all.

My dear father, you must easily imagine that I could not help embracing with all tenderness so dear and so lovely a woman. In fine, I am married to her, I have lived very happy hitherto, and am now grown more happy, for she is big with child; and likely, before my letter comes to your hands, to make you a grandfather of a pretty boy. You will perhaps wonder that I name the sex of the child before it comes into the world, but we have a way in Lapland of finding that out, which though some judicious people call superstitious, I am really persuaded of by experience, and therefore I indulged my dear wife's curiosity, when she signified to me she had a mind to make the usual trial, whether the child she was going to be delivered of would be a boy or a girl.

You must understand, my dear father, the people here

judge of the sex of the child by the moon, unto which they compare a big-bellied woman. If they see a star appear just above the moon, it is a sign it will be a boy, but, if the star be just below the moon, they conjecture her to be big with a girl. This observation and remark of Laplanders has, I know, been accounted by some, and those wise and judicious men too, to be ridiculously superstitious; but I have been led into an easy belief of this mystery, by a mistress that is superior to wisdom itself, constant, and therefore probably infallible, experience. I therefore indulged my wife in this her request, and went with her to the ceremony; the star appeared above the moon, which prognosticates a boy, which I wish may, and I scarce doubt will, prove true, and when she is brought to bed I will send you word of it. It is remarkable, likewise, that a star was seen just before the moon, which we also count a very good omen. For it is a custom likewise here in Lapland, to consult the moon, as an oracle about the health and vigour of the child. If a star be seen just before the moon, we count it a sign of a lusty and well grown child, without blemish; if a star comes just after, we reckon it a token that the child will have some defect or deformity, or die soon after it is born.

Having thus told you the manners of the country I live in at present, as much at large as the nature of a letter will permit, and related to you my own happy circumstances, and the kindly promises of the heavens that are ushering in the birth of my child, I would not have you think that I addict myself to the superstitions of the country, which are very many and groundless, and arising partly from the remainder of Pagan worship, which is still cultivated among some of the more obstinate inhabitants. I have, on the contrary, since I married her, endeavoured to repay my wife's temporal blessings to me with those that are endless, instructed her in all the points of religion, and made her perfectly a Christian; and she, by her devotion and prayers for me, makes me such amends for it that I hope in us two St. Paul's saying will be verified, viz., "That the woman shall be sanctified in her husband, and the husband shall be sanctified in his wife."

However, I must take notice in this place, with all due deference to Christianity, that though I am obliged to applaud the prudence and piety of Charles the Ninth of Sweden, who,

constituting Swedish governors over this country, abrogated their practice of superstitious and art magic upon pain of death, yet that king carried the point too far, and intermingled with these arts the pretensions to the gift of a second-sight, which you know how frequent it is with us in Scotland, and which, I assure you, my wife (though she durst not publicly own it for fear of incurring the penalty of those Swedish laws) does, as it were, inherit (for all her ancestors before her have had it from time immemorial) to a greater degree than ever I knew any of our countrywomen or countrymen.

One day last week she distracted me between the extremes of joy and sorrow. She told me I should see you shortly, and that my coming son would grow to be one of the most remarkable men in England and Scotland, for his power of foresight; but that I should speedily lose her, and meet with difficulties in my own country, in the same manner as my father, meaning you, sir, had done before me, and on the same account, viz., of civil broils, and intestine wars in Scotland.

These unfortunate parts of her relation I would not conceal from you, because the veracity of her notions should appear, if they are true, though you may be sure I much wish they all may prove false to the very last; excepting that wherein she tells me, my son will be greatly remarkable, and that I shall shortly see my dear father, which I daily long for, and will endeavour to do as soon as possible. Pray remember me to all friends; being,

Honoured sir,
Your most dutiful and loving son,
ARCHIBALD CAMPBELL.

THE SECOND LETTER.

I AM now the happiest man alive; the prosperous part of my wife's predictions, which I mentioned to you in my last, is come in some measure to pass. The child she has brought me proves a boy, and as fine a one as I ever beheld, (if fondness for my own makes me not blind); and sure it cannot be fondness, because other plain circumstances joined at his birth to prove it a more than ordinary remarkable one. He

was born with a caul upon his head, which we count one of the luckiest signs that can be in nature ; he had likewise three teeth ready cut through the gums, and we reckon that an undeniable testimony and promise given to the world by nature, that she intends such a person for her extraordinary favourite, and that he is born for great things, which I daily beg of heaven may come to pass.

Since I have known for some months what it is to be a father, it adds a considerable weight to those affections which I had for my wife. I thought that my tenderness for her was at the height of perfection before ; which shows how little we know of those parts of nature that we have yet never tried, and of which we have not yet been allotted our share to act upon the stage of life. I find that I did love her then as well as a husband could love a wife, that is, a wife without a child ; but the love to a wife that has a child, is a feeling wonderful and inexpressibly different. A child is the seal and the pledge of love. Meditating upon this, has likewise doubled my affection to you. I loved you before, as a son, and because as such, I felt your tenderness ; but my love is much increased now, because I know the tenderness which you felt for me as a father. With these pleasing images of thought, I often keep you nearer company at this vast distance, than when I lived irregularly under your eye. These reflections render a solitary life dear to me. And though I have no manner of acquaintance with her relations, who hate me, as I am told, nor indeed with almost any of the inhabitants, but my own domestics, and those I am forced to deal with, yet I have as much, methinks, as I wish for, unless I could come over to Shetland and live with you, which I the more ardently desire, because I think I and my wife could be true comforts to you, in your advanced years ; now I know what living truly is. I am daily persuading my wife to go with me ; but she denies me with kind expressions, and says, she owes too much to the place, however less pleasant in itself than other climates, where she had the happiness of first joining hands with me in wedlock, ever to part from it. But I must explain how I ask, and how she refuses. I resolved never directly and downrightly to ask her, because I know she can refuse me nothing ; and that would be bearing hard upon the goodness of her will. But my way of persuading her consists in endeavouring to make her in love with the

place, by agreeable descriptions of it, and likewise of the humane temper of the people ; so that I shortly shall induce her to signify to me that it is her own will to come with me, and then I shall seem rather to consent to her will, than to have moved it over to my own. These hopes I have of seeing my dear father very shortly, and I know such news would make this letter, which I therefore send, more acceptable to him, to whom I will be,

A most dutiful and
affectionate son, till death,
ARCHIBALD CAMPBELL.

P. S. If I cannot bring my wife to change this country for another, I have brought her to that pitch of devotion, that whenever Providence, which, notwithstanding her predictions, I hope will be long yet, shall call her to change this world for another, it will be happy with her there ; she joins with me in begging your blessing to me, herself, and our little Duncan, whom we christened so, out of respect to the name you bear.

THE THIRD LETTER.

MY DEAR FATHER,

I AM lost in grief ; I had just brought my wife (her that was my wife, for I have none now, I have lost all joy), in the mind of coming over to be a comfort to you. But now grief will let me say no more than that I am coming to beg comfort from you, and by this I prepare you to receive, when he comes, a son in tears and mourning.

ARCHIBALD CAMPBELL.

P.S. I have a babe, not much above two years old, must bear the hardships of travelling over the ice, and all through Muscovy, for no ships can stir here for many months ; and I cannot bear to live in this inhospitable place, where she died, that only could make it easy to me, one moment beyond the first opportunity I have of leaving it. She is in heaven ; that should make me easy, but I cannot ; I am not so good a Christian as she was—I am lost and ruined.

CHAPTER II.

AFTER THE DEATH OF MR. DUNCAN CAMPBELL'S MOTHER IN LAPLAND, HIS FATHER, ARCHIBALD, RETURNED WITH HIS SON TO SCOTLAND. HIS SECOND MARRIAGE, AND HOW HIS SON WAS TAUGHT TO WRITE AND READ.

MR. ARCHIBALD CAMPBELL, having buried his Lapland lady, returned to Scotland, and brought over with him his son, Mr. Duncan Campbell. By that time he had been a year in his own country, he married a second wife; a lady whom I had known very well for some years, and then I first saw the boy; but, as they went into the western islands, I saw them not again in three years. She being, quite contrary to the cruel way much in use among stepmothers, very fond of the boy, was accustomed to say, she did, and would always think him her own son. The child came to be about four years of age, as she has related to me the story since, and not able to speak one word, nor to hear any noise; the father of him used to be mightily oppressed with grief, and complain heavily to his new wife, who was no less perplexed, that a boy so pretty, the son of so particular a woman, which he had made his wife, by strange accidents and adventures, and a child coming into the world with so many amazing circumstances attending his birth, should lose those precious senses by which alone the social commerce of mankind is upheld and maintained, and that he should be deprived of all advantages of education, which could raise him to the character of being the great man that so many concurring incidents at his nativity promised and betokened he would be.

One day, a learned divine, who was of the university of Glasgow, but had visited Oxford, and been acquainted with the chief men of science there, happening to be in conversation with the mother-in-law of this child, she related to him her son's misfortunes, with so many marks of sorrow, that she moved the good old gentleman's compassion, and excited in him a desire to give her what relief and consolation he could in this unhappy ease. His particular inclination to do her good offices, made him recollect, that, at the time he was at Oxford, he had been in company with one Doctor Wallis, a man famous for learning, who had told him that he had

taught a born deaf and dumb man to write, and to read, and even to utter some sounds articulately with his mouth; and that he told him he was then going to commit to print the method he made use of in so instructing that person, that others, in the like unfortunate condition might receive the same benefits and advantages from other masters, which his deaf and dumb pupil had received from him. A dumb man recovering his speech, or a blind man gaining his sight, or a deaf one getting his hearing, could not be more overjoyed than Mrs. Campbell was at these unexpected tidings, and she wept for gladness when he told it. The good gentleman animated and encouraged her with the kindest promises, and to keep alive her hopes, assured her he would send to one of the chief booksellers in London to inquire after the book, who would certainly procure it him if it was to be got, and that afterwards he would peruse it diligently, make himself master of Doctor Wallis's method, and though he had many great works upon his hands at that time, he would steal from his other studies leisure enough to complete so charitable an office, as teaching the dumb and deaf to read and to write, and give her son, who was by nature deprived of them, the advantages of speech, as far as art would permit that natural defect to be supplied by her powerful interposition.

When the mother came home, the child, who could hear no knocking, and therefore it must be by a strange and inexplicable instinct in nature, was the first that ran to the door, and falling in a great fit of laughter, a thing it was not much used to before, having on the contrary rather a melancholy cast of complexion, it clung round its mother's knees, incessantly embracing and kissing them, as if just at that time it had an insight into what the mother had been doing for it, and into its own approaching relief from its misery.

When the mother came with the child in her hand to the father, to tell him the welcome news, the child burst afresh into a great fit of laughter, which continued for an unusual space of time; and the scene of such reciprocal affection and joy between a wife and her own husband, on so signal an occasion, is a thing easier to be felt by parents of a good disposition, imagining themselves under the same circumstances, with regard to a child they loved with fondness, than to be expressed or described by the pen of any writer. But

it is certain, whenever they spoke of this affair, as anybody, who knows the impatience of parents for the welfare of an only child, may guess, they must be often discoursing it over, and wishing the time was come; the boy, who used seldom so much as to smile at other times, and who could never hear the greatest noise that could be made, would constantly look wishfully in their faces and laugh immoderately, which is a plain indication that there was then a wonderful instinct in nature, as I said before, which made him foretaste his good fortune, and, if I may be allowed the expression, the dawnings as it were of the second-sight, were then pregnant within him.

To confirm this, the happy hour of his deliverance being come, and the doctor having procured Mr. Wallis's book, came with great joy, and desired to see his pupil; scarce were the words out of his mouth when the child happened to come into the room, and running towards the doctor, fell on his knees, kissed his hand eagerly, and laughed as before, which to me is a demonstration that he had an insight into the good which the doctor intended him.

It is certain, that several learned men, who have written concerning the second-sight, have demonstrated by incontestable proofs, and undeniable arguments, that children, nay, even horses and cows, see the second-sight, as well as men and women advanced in years. But of this I shall discourse at large in its proper place, having allotted a whole future chapter for that same subject of second-sightedness.

In about half a year, the doctor taught his little dumb pupil first to know his letters, then to name anything whatsoever, to leave off some savage motions which he had taken of his own accord before, to signify his mind by, and to impart his thoughts by his fingers and his pen, in a manner as intelligible, and almost as swift through the eyes, as that is of conveying our ideas to one another, by our voices, through the conduits and portholes of the ears. But in little more than two years he could write and read as well as anybody. Because a great many people cannot conceive this, and others pretend it is not to be done in nature, I will a little discourse upon Doctor Wallis's foundation, and show in a manner obvious to the most ignorant, how this hitherto mysterious help may be easily administered to the deaf and the dumb, which shall be the subject of the ensuing chapter.

But I cannot conclude this without telling the handsome saying with which this child, when not quite six years old, as soon as he thought he could express himself well, paid his first acknowledgment to his master, and which promised how great his future genius was to be, when so witty a child ripened into man. The words he wrote to him were these only altered into English from the Scotch.

SIR,

It is no little work you have accomplished. My thanks are too poor amends; the world, sir, shall give you thanks; for as I could not have expressed myself without your teaching me, so those that can talk, though they have eyes, cannot see the things which I can see, and shall tell them; so that in doing me this, you have done a general service to mankind.

CHAPTER III.

THE METHOD OF TEACHING DEAF AND DUMB PERSONS TO WRITE, READ, AND UNDERSTAND A LANGUAGE.

It is, I must confess, in some measure, amazing to me that men, of any moderate share of learning, should not naturally conceive of themselves a plain reason for this art, and know how to account for the practicability of it, the moment they hear the proposition advanced; the reasons for it are so obvious to the very first consideration we can make about it. It will be likewise as amazing to me that the most ignorant should not conceive it, after so plain a reason is given them for it, as I am now going to set down.

To begin: how are children at first taught a language that can hear? are they not taught by sounds? and what are those sounds, but tokens and signs to the ear, importing and signifying such and such a thing? If, then, there can be signs made to the eye, agreed by the party teaching the child, that they signify such and such a thing, will not the eye of the child convey them to the mind, as well as the ear? They are indeed different marks to different senses, but both the one and the other do equally signify the same things or notions, according to the will of the teacher, and consequently must have an equal effect with the person who is to be in-

structed, for though the manners signifying are different, the things signified are the same.

For example; if, after having invented an alphabet upon the fingers, a master always keeps company with a deaf child, and teaches it to call for whatsoever it wants by such motions of the fingers which, if put down by letters, according to each invented motion of each finger, would form in writing a word of a thing which it wanted; might not he by these regular motions teach its eye the same notions of things, as sounds do to the ears of children that hear? The manner of teaching the alphabet by fingers, is plainly set down in the following table.

When the deaf child has learned by these motions a good stock of words, as children that hear first learn by sounds, we may, methinks, call not improperly, the fingers of such a dumb infant, its mouth, and the eye of such a deaf child, its ear. When he has learnt thus far, he must be taught to write the alphabet, according as it was adapted to the motions of his fingers; as for instance, the five vowels, *a, e, i, o, u*, by pointing to the top of the five fingers, and the other letters, *b, c, d, &c.*, by such other place or posture of a finger, as in the above-mentioned table is set forth, or otherwise, it shall be agreed upon. When this is done, the marks *B, R, E, A, D*, and so of all other words, corresponding with such fingers, conveys through his eyes, unto his head, the same notion, viz., the thing signified, as the sound we give to those same letters, making the word 'bread,' do into our head, through the ears.

This once done, he may be easily taught to understand the parts of speech, as the verb, the noun, pronoun, &c., and so, by rules of grammar and syntax, to compound ideas, and connect his words into a language. The method of which, since it is plainly set forth in Doctor Wallis's letter to Mr. Beverly, I shall set it down by way of extract; that people in the same circumstances with the person we treat of, and of the like genius, may not have their talents lost for want of the like assistance.

When once a deaf person has learned so far as to understand the common discourse of others, and to express his mind tolerably well in writing, I see no room to doubt but that, provided nature has endowed him with a proper strength of genius, as other men that hear, he may become capable, upon

farther improvement, of such farther knowledge as is attainable by reading. For I must here join with the learned Doctor Wallis in asserting, as to the present case before us, that no reason can be assigned why such a deaf person may not attain the understanding of a language as perfectly as those that hear; and with the same learned author I take upon me to lay down this proposition as certain, that allowing the deaf person the like time and exercise, as to other men is requisite in order to attain the perfection of a language, and the elegance of it, he may understand as well, and write as good language, as other men; and abating only what doth depend upon sound, as tones, cadences, and such punctilios, no whit inferior to what he might attain to, if he had his hearing as others have?

An Extract from Dr. Willis, concerning the method of teaching the Deaf and Dumb to Read.

It is most natural, (as children learn the names of things), to furnish him by degrees with a nomenclator, containing a competent number of names of things common and obvious to the eye, that you may show the thing answering to such a name, and these digested under convenient titles, and placed under them in such convenient order, in several columns, or other orderly situation in the paper, as by their position best to express to the eye their relation or respect to one another. As contraries or correlatives one against the other, subordinates or appurtenances under their principle, which may serve as a kind of local memory.

Thus, in one paper, under the title mankind, may be placed, not confusedly, but in decent order, man, woman, child (boy, girl).

In another paper, under the title body, may be written, in like convenient order, head (hair, skin, ear), face, forehead, eye (eyelid, eyebrow), cheek, nose (nostril), mouth (lip, chin), neck, throat, back, breast, side (right side, left side), belly, shoulders, arm (elbow, wrist, hand,—back, palm), finger (thumb, buckle, nail), thigh, kneec, leg (shin, calf, ancle), foot (heel, sole), toe.

And when he hath learned the import of words in each paper, let him write them in like manner, in distinct leaves

or pages of a book, prepared for that purpose, to confirm his memory, and to have recourse to it upon occasion.

In a third paper, you may give him the inward parts; as skull (brain), throat (windpipe, gullet), stomach, guts, heart, lungs, liver, spleen, kidney, bladder (urine), vein (blood), bone (marrow), flesh, fat, &c.

In another paper, under the title beast, may be placed horse (stonchorse, gelding), mare (colt), bull (ox), cow, calf. Sheep, ram (wether), ewe (lamb), hog, boar, sow, pig, dog, (mastiff, hound, greyhound, spaniel), bitch (whelp, puppy), hare, rabbit, cat, mouse, rat, &c.

Under the title bird, put cock, capon, hen, chick, goose (gander), gosling, duck (drake), swan, crow, kite, lark, &c.

Under the title fish, put pike, eel, place, salmon, lobster, crawfish, &c.

You may then put plants or vegetables under several heads or subdivisions of the same head; as tree (root, body, bark, bough, leaf, fruit), oak, ash, apple-tree, pear-tree, vine, &c. Fruit: apple, pear, plum, cherry, grape, nut, orange, lemon, Flower; rose, tulip, gilliflower herb, (weed), grass, corn, wheat, barley, rye, pea, bean.

And the like of inanimates; as heaven, sun, moon, star, element, earth, water, air, fire; and under the title earth,—clay, sand, gravel, stone. Metal; gold, silver, brass, copper, iron (steel), lead, tin (pewter), glass. Under the title water, put sea, pond, river, stream; under that of air, put light, dark, mist, fog, cloud, wind, rain, hail, snow, thunder, lightning, rainbow. Under that of fire; coal, flame, smoke, soot, ashes.

Under the title clothes, put woollen (cloth, stuff), linen (holland, lawn, lockarum), silk, (satin, velvet), hat, cap, band, doublet, breeches, coat, cloak, stocking, shoe, boot, shirt, petticoat, gown, &c.

Under the title house, put wall, roof, door, window, case-ment, room.

Under room, put shop, hall, parlour, dining-room, chamber, study, closet, kitchen, cellar, stable, &c.

And under each of these, as distinct heads, the furniture or utensils belonging thereunto; with divisions and subdivisions, as there is occasion, which I forbear to mention, that I be not too prolix.

And in like manner, from time to time, may be added more collections, or classes of names or words, conveniently digested, under distinct heads, and suitable distributions, to be written in distinct leaves or pages of his book in such order as may seem convenient.

When he is furnished with a competent number of names, though not so many as I have mentioned, it will be seasonable to teach him under the titles singular and plural, the formation of plurals from singulars, by adding *s*, or *es*; as hand, hands; face, faces; fish, fishes, &c., with some few irregulars, as man, men; woman, women; foot, feet; tooth, teeth; mouse, mice; louse, lice; ox, oxen, &c.

Which, except the irregulars, will serve for possessives, to be after taught him, which are formed by their primitives by like addition of *s* or *es*, except some few irregulars, as my, mine; thy, thine; our, ours; your, yours; his, her, hers; their, theirs, &c.

And in all those and other like cases, it will be proper first to show him the particulars, and then the general title.

Then teach him in another page or paper, the particles, a, an, the, this, that, these, those.

And the pronouns, I, me, my, mine, thou, thee, thy, thine, we, us, our, ours, ye, you, your, yours, he, him, his, she, her, hers, it, its, they, them, their, shoes, heirs, who, whom, whose.

Then under the titles substantive, adjective, teach him to connect these, as my hand, your head, his foot, his feet, her arm, her arms, our hats, their John's coat, William's band, &c.

And in order to furnish him with more adjectives, under the title colours, you may place black, white, gray, green, blue, yellow, red, &c., and having showed the particulars, let him know that these are called colours. The like for taste and smell; as sweet, bitter, sour, stink.

And for hearing, sound, noise, word.

Then for touch or feeling, hot, warm, cold, cool, wet, moist, dry, hard, soft, tough, brittle, heavy, light, &c.

From whence you may furnish him with more examples of adjectives with substantives; as white bread, brown bread, green grass, soft cheese, hard cheese, black hat, my black hat, &c.

And then inverting the order, substantive, adjective, with the verb copulative between; as silver is white, gold is yel-

low, lead is heavy, wood is light, snow is white, ink is black, flesh is soft, bone is hard, I am sick, I am not well, &c., which will begin to give him some notion of syntax.

In like manner when substantive and substantive are so connected; as gold is a metal, a rose is a flower, they are men, they are women, horses are beasts, geese are fowls, larks are birds, &c.

Then as those before relate to quality, you may give him some other words relating to quantity. As long, short, broad, narrow; thick, thin; high, tall, low; deep, shallow, great, big, small (little), much, little; many, few, full, empty; whole, part, piece; all, some, none, strong, weak, quick, slow, equal, unequal, bigger, less.

Then words of figure; as straight, crooked, plain, bowed, concave, hollow, convex; round, square, three-square, sphere, globe, bowl, cube, die, upright, sloping, leaning forward, leaning backward, like, unlike.

Of gesture; as stand, lie, sit, kneel, sleep.

Of motion; as move, stir, rest, walk, go, come, run, leap, ride, fall, rise, swim, sink, drawn, slide, creep, crawl, fly, pull, draw, thrust, throw, bring, fetch, carry.

Then words relating to time; place, number, weight, measure, money, &c., are, in convenient time, to be showed him distinctly; for which the teacher, according to his discretion, may take a convenient season.

As likewise the time of the day; the days of the week, the days of the month, the months of the year, and other things relating to the almanack, which he will quickly be capable to understand, if once methodically shown him.

As likewise the names and situation of places and countries, which are convenient for him to know; which may be orderly written in his book, and showed him in the map of London, England, Europe, the world, &c.

But these may be done at leisure, as likewise the practice of arithmetic, and other like pieces of learning.

In the mean time, after the concord of substantive and adjective, he is to be showed by convenient examples, that of the nominative and verb; as, for instance, I go, you see, he sits, they stand, the fire burns, the sun shines, the wind blows, the rain falls, the water runs, and the like, with the titles in the top nominative verb.

After this, under the titles nominative verb, accusative,

give him examples of verbs transitive ; as I see you, you see me, the fire burns the wood, the boy makes the fire, the cook roasts the meat, the butler lays the cloth, we eat our dinner.

Or even with a double accusative ; as, you teach me writing or to write, John teacheth me to dance, Thomas, tell me a tale, &c.

After this you may teach him the flexion or conjugation of the verb, or what is equivalent thereunto ; for in our English tongue each verb hath but two tenses, the present and the preter ; two participles, the active and the passive ; all the rest is performed by auxiliaries, which auxiliaries have no more tenses than the other verbs.

Those auxiliaries are, do, did, will, would, shall, should, may, might, can, could, must, ought, to, have, had, am, be, was. And if by examples you can insinuate the signification of these few words, you have taught him the whole flexion of the verb.

And here it will be convenient, once for all, to write him out a full paradigm of some one verb, suppose 'to see,' through all those auxiliaries.

The verb itself hath but these four words to be learned, see, saw, seeing, seen, save that after thou, in the second person singular, in both tenses, we add est, and in the third person singular, in the present tense, eth or es, or instead thereof, st, th, s, and so in all verbs.

Then to the auxiliaries, do, did, will, would, shall, should, may, might, can, could, must, ought, to, we join the indefinite see. And after have, had, am, be, was, the passive particle seen, and so for all other verbs.

But the auxiliary, 'am,' or 'be,' is somewhat irregular in a double form.

Am, art, is ; plural are ; was, wast, was ; plural were.

Be, beest, be ; plural be ; were, wert, were ; plural were.

Be, am, was, being, been.

Which, attended with the other auxiliaries, make us the whole passive voice.

All verbs, without exceptions, in the active participle, are formed by adding ing, as see, seeing ; teach, teaching, &c.

The preter tense and the participle are formed regularly, by adding ed, but are often subject to contractions and other irregularities, sometimes the same in both, sometimes different,

and therefore it is convenient here to give a table of verbs, especially the most usual, for those three cases, which may at once teach their signification and formation; as boil, boiled: roast, roasted, roasted; bake, baked, baked, &c.; teach, taught, taught; bring, brought, brought; buy, bought, bought, &c.; see, saw, seen; give, gave, given; take, took, taken; forsake, forsook, forsaken; write, wrote, written, &c.; with many more fit to be learned.

The verbs being thus dispatched, he is then to learn the prepositions, whercin lies the whole regimen of the noun. For diversity of cases we have none, the force of which is to be insinuated by convenient examples, suited to their different significations; as for instance, *of* a picce *of* bread, a pint *of* wine, the colour *of* a pot, the colour *of* gold, a ring *of* gold, a cup *of* silver, the mayor *of* London, the longest *of* all, &c.

And in like manner, for, off, on, upon, to, unto, till, until, from, at, in, within, out, without, into, out of; about, over, under; above, below; between, among; before, behind, after; for, by, with, through, against, concerning; and by this time he will be pretty well enabled to understand a single sentence.

In the last place, he is in like manner to be taught conjunctions, which serve to connect not words only, but sentences; as and, also; likewise, either or whether; neither, nor, if, then, why, wherefore, because, therefore, but, though, yet, &c.; and these illustrated by convenient examples in each case, as, *Because* I am cold, *therefore* I go to the fire, *that* I may be warm, *for* it is cold weather.

If it were fair, *then* it would be good walking, but however, *though* it rain, *yet* I must go, *because* I promised; with other like instances.

And by this time his book, if well furnished with plenty of words, and those well digested under several heads, and in good order, and well recruited from time to time as new words occur, will serve him in the nature of a dictionary and grammar.

And in case the deaf person be otherwise of a good natural capacity, and the teacher of a good sagacity, by this method, proceeding gradually step by step, you may, with diligence and due application of teacher and learner, in a year's time, or thereabouts, perceive a greater progress than you would expect, and a good foundation laid for farther instruction in

matters of religion and other knowledge which may be taught by books.

It will be convenient all along to have pen, ink, and paper, ready at hand, to write down in a word what you signify to him by signs, and cause him to write, or show how to write what he signifies by signs, which way of signifying their mind by signs deaf persons are often very good at; and we must endeavour to learn their language, if I may so call it, in order to teach them ours, by showing what words answer to their signs.

It will be convenient, also, as you go along, after some convenient progress made, to express, in as plain language as may be, the import of some of the tables; as for instance:—

The head is the highest part of the body, the feet the lowest part; the face is the fore part of the head, the forehead is over the eyes, the cheeks are under the eyes, the nose is between the cheeks, the mouth is under the nose and above the chin, &c.

And such plain discourse put into writing, and particularly explained, will teach him by degrees to understand plain sentences; and like advantages a sagacious teacher may take, as occasion offers itself from time to time.

This extract is mostly taken out of the ingenious Dr. Wallis, and lying hid in that little book, which is but rarely inquired after and too scarcely known, died in a manner with that great man. And as he designed it for the general use of mankind that laboured under the misfortune of losing those two valuable talents of hearing and speaking, I thought it might not be amiss (in the life of so particular a dumb person as I am writing) to give them this small but particular fragment of grammar and syntax.

It is exactly adjusted to the English tongue; because such are the persons with whom the Doctor had to deal, and such the persons whose benefit alone I consult in this treatise.

One of the chief persons who was taught by Dr. Wallis was Mr. Alexander Popham, brother-in-law (if I am not mistaken) to the present Earl of Oxford; and he was a very great proficient in this way; and though he was born deaf and dumb, understood the language so well as to give under his hand, many rare indications of a masterly genius.

The uncle of his present Sardinian Majesty, as I have been

credibly informed, had the want of the same organs, and yet was a perfect statesman, and wrote in five or six different languages elegantly well.

Bishop Burnet, in his book of travels, tells us a wonderful story, almost incredible; but tells it as a passage that deserves our belief. It is concerning a young lady at Genoa, who was not only deaf and dumb, but blind, too, it seems, into the bargain; and this lady, he assures us as a truth, could, by putting her hand on her sister's mouth, know everything she said.

But to return back to England. We have many rare instances of our own countrymen, the principal of whom I shall mention, as their names occur to my memory. Sir John Gawdy, Sir Thomas Knotcliff, Sir — Gostwick, Sir Henry Lydall, and Mr. Richard Lyns of Oxford, were all of this number, and yet men eminent in their several capacities, for understanding many authors, and expressing themselves in writing with wonderful facility.

In Hatton garden, there now lives a miracle of wit and good nature, I mean the daughter of Mr. Loggin, who, though born deaf and dumb, (and she has a brother who has the same impediments), yet writes her mind down upon any subject with such acuteness as would amaze learned men themselves and put many students that have passed for wits, to the blush, to see themselves so far surpassed by a woman amidst that deficiency of the common organs. If anybody speaks a word distinctly, this lady will, by observing narrowly the motion of the speaker's lips pronounce the word afterwards very intelligibly.

As there are a great many families in England and Ireland that have several, and some even have five or six dumb persons belonging to them; and as a great many more believe it impossible for persons born deaf and dumb to write and read, and have thence taken occasion to say and assert that Mr. Campbell could certainly speak, I could never think it a digression in the history of this man's life to set down the grammar by which he himself was taught, and which he has taught others (two of which scholars of his are boys in this town), partly to confute the slander made against him, and partly for the help of others dumb and deaf, whose parents may by these examples be encouraged to get them taught.

CHAPTER IV.

YOUNG DUNCAN CAMPBELL RETURNS WITH HIS MOTHER TO EDINBURGH. THE EARL OF ARGYLE'S OVERTHROW. THE RUIN OF MR. ARCHIBALD CAMPBELL AND HIS DEATH. YOUNG DUNCAN'S PRACTICE IN PREDICTION AT EDINBURGH WHILE YET A BOY.

OUR young boy, now between six and seven years of age, half a Highlander and half a Laplander, delighted in wearing a little bonnet and plaid, thinking it looked very manly in his countrymen, and his father, as soon as he was out of his hanging sleeves, and left off his boy's vest, indulged him with that kind of dress, which is truly antique and heroic. In this early part of his nonage he was brought to Edinburgh by his mother-in-law, where I myself grew afresh acquainted with her, his father being then but lately dead, just after the civil commotion, and off and on, I have known him ever since, and conversed with him very frequently during that space of time, which is now about three or four and thirty years, so that whatever I say concerning him in the future pages I shall relate to the reader from my own certain knowledge, which, as I resolved to continue anonymous, may, perhaps, not have so much weight and authority as if I had prefixed my name to the account. Be that as it will, there are hundreds of living witnesses that will justify each action I relate, and his own future actions while he lives will procure belief and credit to the precedent ones, which I am going to record; so that if many do remain infidels to my relations, and will not allow them exact (the fate of many as credible and more important historians than myself), I can however venture to flatter myself that greater will be the number of those who will have a faith in my writings than of those who will reject my accounts as incredible.

Having just spoke of the decease of Mr. Archibald Campbell, the father of our young Duncan Campbell, it will not be amiss here to observe how true the predictions of his Lapland mother were, which arose from second-sight, according to the notices given by the child's father, to his grandfather, in his letter from Lapland, even before it was born, which shows

that the infant held this second-sighted power, or occult faculty of divination, even by inheritance.

In the year 1685, the Duke of Monmouth and the Earl of Argyle sailed out of the ports of Holland without any obstruction, the Earl of Argyle in May, with three ships for Scotland, and Monmouth in June, with the same number for England.

The Earl setting out first, was also the first at landing. Argyle having attempted to land in the north of Scotland, and being disappointed by the vigilance of the Bishop of the Orkades, landed in the west, and encamped at Dunstaffnage Castle, in the province of Lorn, which had belonged to him. He omitted nothing that might draw over to him all the malcontents in the kingdom, whom he thought more numerous than they afterwards appeared to be. He dispersed about his declarations, wherein, after protesting that he had taken up arms only in defence of religion and the laws, against an unjust usurper (so he styled James the Second), he invited all good Protestants, and such Scotch as would assert their liberty, to join him against a prince, he said, who was got into the throne to ruin the Reformation, and to bring in Popery and arbitrary power. Next he sent letters to those he thought his friends, among whom was Mr. Archibald Campbell, who, according to the vast deference payed by the Scots to their chief, joined him, though in his heart of quite a different principle, to call them to his assistance. He detached two of his sons to make inroads in the neighbourhood, and compel some by threats, others by mighty promises, to join him. All his contrivances could not raise him above three thousand men, with whom he encamped in the Isle of Bute, where he was soon, in a manner besieged by the Earl of Dumbarton, with the king's forces, and several other bodies, commanded by the Duke of Gordon, the Marquis of Athol, the Earl of Arran, and other great men, who came from all parts to quench the fire before it grew to a head.

The Earl of Argyle being obliged to quit a post he could not make good, went over into a part of the country of his own name, where, having hastily fortified a castle called Ellingrey, he put into it the arms and ammunition taken out of his ships, which lay at anchor under the cannon of a fort he erected near that place. There his rout began; for going out from the castle with his forces to make an incursion, one

of his parties was defeated by the Marquis of Athol, who slew four hundred of his men; and Captain Hamilton, who attacked his ships with some of the king's, and took them without any resistance.

The Earl of Dumbarton advancing towards him, at the same time, by long marches, while he endeavoured to secure himself by rivers, surprised him passing the Clyde in the village of Killern, as he was marching towards Lenox. Dumbarton coming upon them at night, would have stayed till the next day to attack the rebels, but they gave him not so much time, for they passed the river in the night, in such confusion, that being overcome by fear, they dispersed as soon as over. Argyle could scarce rally so many as would make him a small guard, which was soon scattered again; Dumbarton having passed the river, and divided his forces to pursue those that fled. Argyle had taken guides to conduct him to Galloway; but they mistaking the way, and leading him into a bog, most of those that still followed him quitted their horses, every man shifting for himself.

Argyle himself was making back alone towards the Clyde, when two resolute servants, belonging to an officer in the king's army meeting him, though they knew him not, bid him surrender. He fired at and missed them; but they took better aim, and wounded him with a pistol ball. Then the earl drawing his two pistols out of the holsters, quitted his horse, that was quite tired, and took the river. A country fellow, who came with those two, that had first assaulted him, pursued him with a pistol in his hand; the earl would have fired one of his, but the flint failing he was dangerously wounded in the head by the peasant. He discovered himself as he fell senseless, crying out, Unfortunate Argyle. This nobleman, how far soever he may be thought misled in principle, was certainly in his person a very brave and a very gallant hero. They made haste to draw him out and bring him to himself; after which, being delivered up to the officers, the erring, unfortunate great man, was conducted to Edinburgh and there beheaded.

Many gentlemen that followed the fortunes of this great man, though not in his death, they shared in all the other calamities attending his overthrow. They most of them fled into the remotest isles and the obscurest corners of all Scotland; contented with the saving of their lives; they grew

exiles and banished men of their own making, and abdicated their estates before they were known to be forfeited, because, for fear of being informed against by the common fellows they commanded, they durst not appear to lay their claims. Of this number was Mr. Archibald Campbell, and this new disaster wounded him deep into the very heart, after so many late misadventures, and sent him untimely to the grave. He perfectly pined away and wasted; he was six months dying inch by inch, and the difference between his last breath and his way of breathing during all that time, was only, that he expired with a greater sigh than he ordinarily fetched every time when he drew his breath.

Everything the Lapland lady had predicted so long before, being thus come to pass, we may the less admire at the wonders performed by her son, when we consider this faculty of divination to be so derived to him from her, and grown as it were hereditary.

Our young prophet, who had taught most of his little companions to converse with him by finger, was the head at every little pastime and game they played at. Marbles, which he used to call children's playing at bowls, yielded him mighty diversion; and he was so dexterous an artist at shooting that little alabaster globe from between the end of his forefinger and the knuckle of his thumb, that he seldom missed hitting plum, as the boys call it, the marble he aimed at, though at the distance of two or three yards. The boys always when they played coveted to have him on their side, and by hearing that he foretold other things, used to consult him, when they made their little matches, which were things of great importance in their thoughts, who should get the victory. He used commonly to leave these trifles undecided, but if ever he gave his opinion in these trivial affairs, the persons fared well by their consultation, for his judgment about them was like a petty oracle, and the end always answered his prediction. But I would have my reader imagine, that though our Duncan Campbell was himself but a boy, he was not consulted only by boys; his penetration and insight into things of a high nature, got air, and being attested by credible witnesses won him the esteem of persons of mature years and discretion.

If a beautiful young virgin languished for a husband, or a widow's mind was in labour to have a second venture of in-

fants by another spouse; if a housekeeper had lost anything belonging to her master, still little Dunean Campbell was at hand; he was the oracle to be applied to, and the little chalked circle, where he was diverting himself with his play-fellows near the cross at Edinburgh, was frequented with as much solicitation, and as much credit, as the tripos of Apollo was at Delphos in ancient times.

It was highly entertaining to see a young blooming beauty come and slyly pick up the boy from his company, carry him home with as much eagerness as she would her gallant, because she knew she should get the name of her gallant out of him before he went, and bribe him with a sugarplum to write down the name of a young Scotch peer in a green ribbon that her mouth watered after.

How often after he has been wallowing in the dust, have I myself seen nice squeamish widows help him up in their gilded chariots, and give him a pleasant ride with them, that he might tell them they should not long lie alone; little Duncan Campbell had as much business upon his hands as the parsons of all the parishes in Edinburgh. He commonly was consulted, and named the couples before the minister joined them; thus he grew a rare customer to the toyshop, from whence he most usually received fees and rewards for his advice. If Lady Betty Such a one was foretold that she should certainly have Beau Such a one in marriage, then little Duncan was sure to have a hobby-horse from the toyshop, as a reward for the promised fop. If such a widow, that was ugly, but very rich, was to be pushed hard for as she pretended, though in reality easily won, little Dunean, upon insuring her such a captain, or such a lieutenant-colonel, was sure to be presented from the same child's warehouse, with a very handsome drum, and a silvered trumpet.

If a sempstress had an itching desire for a parson, she would, upon the first assurance of him, give the little Apollo a pasteboard temple, or church, finely painted, and a ring of bells into the bargain, from the same toy-office.

If a housekeeper lost any plate, the thief was certain to be caught, provided she took little master into the store room, and asked him the question, after she had given him his bellyful of sweetmeats.

Neither were the women only his consulters; the grave merchants, who were anxious for many ventures at sea,

applied to the boy for his opinion of their security, and they looked upon his opinion to be as safe as the insurance office for ships. If he but told them, though the ship was just set sail, and a tempest rose just after on the ocean, that it would have a successful voyage, gain the port designed, and return home safe laden with the exchange of traffic and merchandise, they dismissed all their fears, banished all their cares, set their hearts at ease, and, safe in his opinion, enjoyed a calm of mind amidst a storm of weather.

I myself knew one Count Cog, an eminent gamester, who was a person so far from being of a credulous disposition, that he was an unbeliever in several points of religion, and the next door to an infidel; yet, as much as he was a stranger to faith, he was mastered and overpowered so far in his incredulity by the strange events which he had seen come frequently to pass from the predictions of this child, that he had commonly daily access to this boy to learn his more adverse and more prosperous hours of gaming. At first indeed he would try, when the child foretold him his ill fortune, whether it would prove true, and relying upon the mere hazard and turn of the die, he had always, as he observed, a run of ill luck on those forbidden days, as he never failed of good if he chose the fortunate hours directed by the boy. One time above all the rest, just before he was departing from Edinburgh, and when the season of gaming was almost over—most persons of wealth and distinction withdrawing for pleasure to their seats in the country—he came to young Duncan Campbell to consult, and was extremely solicitous to know how happily or unluckily he should end that term, as we may call it, of the gamester's weighty business, viz., play, there being a long vacation likely to ensue, when the gaming table would be empty, and the box and dice lie idle and cease to rattle. The boy encouraged him so well with his predictions on this occasion, that Count Cog went to the toyshop, brought him from thence a very fine ivory T totum, as children call it, a pretty set of painted and gilded little ninepins and a bowl, and a large bag of marbles and alloys; and what do you think the gamester got by this little present and the prediction of the boy? why, without telling the least tittle of falsehood, within the space of the last week's play, the gains of Count Cog really amounted to no less than 20,000*l.* sterling neat money.

Having mentioned these persons of so many different professions by borrowed names, and perhaps in a manner seemingly ludicrous, I would not have my reader from hence take occasion of looking on my account as fabulous. If I was not to make use of borrowed names, but to tell the real characters and names of the persons, I should do injury to those old friends of his who first gave credit to our young seer, while I am endeavouring to gain him the credit and esteem of new ones, in whose way it has not yet happened to consult him. For many persons are very willing to ask such questions as the foregoing ones; but few or none willing to have the public told they asked them; though they succeeded in their wish, and were amply satisfied in their curiosity. I have represented them perhaps in a ludicrous manner, because though they are mysterious actions they are still the actions of a boy, and as the rewards he received for his advices did really and truly consist of such toys as I mentioned, so could they not be treated of in a more serious manner, without the author's incurring a magisterial air of pedantry, and showing a mind, as it were, of being mighty grave and sententious about trifles. There are, however, some things of greater weight and importance done by him in a more advanced stage of life, which will be delivered to the public with that exactitude and gravity which becomes them; and in some of those relations the names of some persons that are concerned shall be printed, because it will not at all be injurious to them, or because I have their leave, and they are still living to testify what I shall relate.

In the mean time, as the greatest part of his nonage was spent in predicting almost innumerable things, which are all, however, reducible to the general heads above mentioned, I will not tire the reader with any particulars; but instead of doing that, before I come to show his power of divination, in the more active parts of his life, and when after removing from Edinburgh to London, he at last made it his public profession; I shall account how such divinations may be made, and divert the reader with many rare examples, taken from several faithful and undoubted historians, of persons who have done the like before him, some in one way, and some in another; though in this he seems to be peculiar, and to be, if I may be allowed the expression, a species by himself, alone in the talent of prediction; that he has collected with-

in his own individual capacity all the methods which others severally used, and with which they were differently and singly gifted in their several ways of foreseeing and foretelling.

This art of prediction is not attainable any otherwise, than by these three ways; first, it is done by the company of familiar spirits and genii, which are of two sorts; some good and some bad; who tell the gifted person the things of which he informs other people. Secondly, it is performed by the second-sight, which is very various, and differs in most of the possessors, it being but a very little in some, very extensive and constant in others; beginning with some in their infancy, and leaving them before they come to years; happening to others in a middle age, to others again in an old age, that never had it before, and lasting only for a term of years, and now and then for a very short period of time; and in some, intermitting, like fits as it were, of vision, that leave them for a time, and then return to be as strong in them as ever, and it being in a manner hereditary to some families, whose children have it from their infancy, without intermission, to a great old age, and even to the time of their death, which they often foretell before it comes to pass, to a day, nay, even to an hour. Thirdly, it is attained by the diligent study of the lawful part of the art of magic.

Before I give the reader an account, as I shall do in three distinct discourses, first, concerning the intercourse which familiar spirits, viz., the good and bad genii, have had and continue to have to a great degree with some select parts of mankind; secondly, concerning the wonderful and almost miraculous power of a second-sight, with which many, beyond all controversy, have been extraordinarily but visibly gifted; and, thirdly, concerning the pitch of perfection to which the magic science has been carried and promoted by some adepts in that mysterious art; I will premise a few particulars about the genii which attended our little Duncan Campbell, and about the second-sight which he had when yet a child, and when we may much more easily believe that the wonders he performed and wrote of, must have been rather brought about by the intervention of such genii and the mediation of such a sight, than that he could have invented such fables concerning them, and compassed such predictions as seem to want their assistance, by the mere dint of a child's capacity.

One day, I remember, when he was about nine years of age, going early to the house where he and his mother lived, and it being before his mother was stirring, I went into little Duncan Campbell's room to divert myself with him, I found him sitting up in his bed with his eyes broad open, but as motionless as if he had been asleep, or even, if it had not been for a lively beautiful colour which the little pretty fair silver-haired boy always had in his cheeks, as if he had been quite dead; he did not seem so much as to breathe; the eyelids of him were so fixed and immoveable, that the eyelashes did not so much as once shake, which the least motion imaginable must agitate; not to say that he was like a person in an ecstasy, he was at least in what we commonly call a brown study, to the highest degree, and for the largest space of time I ever knew. I, who had been frequently informed by people who have been present at the operations of second-sighted persons, that at the sight of a vision the eyelids of the person are erected, and the eyes continue staring till the object vanishes; I, I say, sat myself softly down on his bedside, and with a quiet amazement observed him, avoiding diligently any motion that might give him the least disturbance, or cause in him any avocation or distraction of mind from the business he was so intent upon. I remarked that he held his head sideways, with his mouth wide open, and in a listening posture, and that after so lively a manner, as, at first general thought, made me forget his deafness, and plainly imagine he heard something, till the second thought of reflection brought into my mind the misfortune that shut up all passage for any sound through his ears. After a steadfast gaze, which lasted about seven minutes, he smiled, and stretched his arms as one recovering from a fit of indolence, and rubbed his eyes; then turning towards me, he made the sign of a salute, and hinted to me, upon his fingers, his desire for pen, ink, and paper, which I reached him from a little desk that stood at his bed's feet.

Placing the paper upon his knees, he wrote me the following lines, which together with my answers I preserve by me, for their rarity, to this very day, and which I have transcribed word for word, as they form a little series of dialogue.

Duncan Campbell. I am sorry I cannot stay with you; but I shall see my pretty youth and my lamb by and by, in the fields, near a little coppice or grove, where I go often to play

with them, and I would not lose their company for the whole world; for they and I are mighty familiar together, and the boy tells me everything that gets me my reputation among the ladies and nobility, and you must keep it secret.

My question. I will be sure to keep it secret; but how do you know you are to meet them there to-day? Did the little boy appoint you?

Duncan Campbell. Yes, he did, and signified that he had several things to predict to me concerning people, that he foreknew would come to me the week following to ask me questions.

My question. But what was you staring at when I came in?

Duncan Campbell. Why, at that little boy that goes along with the lamb I speak of, and it was then he made me the appointment.

My question. How does he do it? Does he write?

Duncan Campbell. No, he writes sometimes, but oftener he speaks with his fingers, and mighty swift; no man can do it so quick, or write half so soon; he has a little bell in his hand, like that which my mother makes me a sign to shake when she wants the servants: with that he tickles my brain strangely, and gives me an incredible delight of feeling in the inside of my head; he usually wakes me with it in the morning when he comes to make me an appointment. I fancy it is what you call hearing, which makes me mighty desirous I could hear in your way; it is sweeter to the feeling, methinks, than anything is to the taste; it is just as if my head was tickled to death, as my nurse used to tickle my sides; but it is a different feeling, for it makes things like little strings tremble in my temples and behind my ears. Now I remember, I will tell you what it is like, that makes me believe it is like your hearing, and that strange thing which you that can speak, call sound or noise: because, when I was at church with my mother, who told me the bells could be heard ringing a mile off, as I was kneeling on the bench, and leaning over the top of the pew and gnawing the board, every time the man pulled the rope, I thought all my head beat as if it would come to pieces, but yet it pleased me methought, rather than pained me, and I would be always gnawing the board when the man pulled the rope, and I told my mother the reason: the feeling of that was some-

thing like the little bell, but only that made my head throb, as if it would break, and this tickles me and makes, as it were, little strings on the back of my ears dance and tremble like anything is not that like your way of hearing? If it be, it is a sweet thing to hear; it is more pleasant than to see the finest colours in the world; it is something like being tickled in the nose with a feather till one sneezes, or like the feeling after one strikes the leg when it has been numb, or asleep, only with this difference, that those two ways give a pain, and the other a pleasure. I remember, too, when I had a great cold, for about two months, I had a feeling something like it, but that was blunt, dull, confused, and troublesome. Is not this like what you call hearing?

My question.—It is the finest kind of hearing, my dear: it is what we call music. But what sort of a boy is that that meets you? and what sort of a lamb?

Duncan Campbell. Oh! though they are like other boys and other lambs which you see, they are a thousand times prettier and finer? you never saw such a boy nor such a lamb in your lifetime.

My question. How big is he? As big as you are? And what sort of a boy is he?

Duncan Campbell. He is a little little pretty boy, about as tall as my knee, his face is as white as snow, and so are his little hands; his cheeks are as red as a cherry, and so are his lips; and when he breathes, it makes the air more perfumed than my mother's sweet bags that she puts among the linen; he has got a crown of roses, cowslips, and other flowers upon his head, such as the maids gather in May; his hair is like fine silver threads, and shine like the beams of the sun; he wears a loose veil down to his feet, that is as blue as the sky in a clear day, and embroidered with spangles, that look like the brightest stars in the night; he carries a silver bell in one hand, and a book and pencil in the other, and he and the little lamb will dance and leap about me in a ring as high as my head; the lamb has got a little silver collar with nine little bells upon it; and every little piece of wool upon its back, that is as white as milk, is tied up all round it in puffs, like a little miss's hair, with ribbons of all colours, and round its head, too, are little roses and violets stuck very thick into the wool that grows upon its forehead, and behind and between its ears, in the shape of a diadem. They first

meet me dancing thus ; and after they have danced some time, the little boy writes down wonderful things in his book, which I write down in mine ; then they dance again, till he rings his bell, and then they are gone all of a sudden, I know not where ; but I feel the tinkling in the inside of my head caused by the bell less and less, till I don't feel it at all, and then I go home, read over my lesson in my book, and when I have it by heart, I burn the written leaves, according as the little boy bids me, or he would let me have no more. But I hear the little bell again, the little boy is angry with me, he pulled me twice by the ear, and I would not displease him for anything, so I must get up and go immediately to the joy and delight of my life.

I told him he might, if he would promise me to tell me farther another time ; he said he would, if I would keep it secret. I told him I would, and so we parted ; though just before he went, he said he smelt some venison, and he was sure they would shortly have some for dinner ; and nothing was so sure as that, my man had my orders to bring a side of venison to me the next day to Mrs. Campbell's, for I had been hunting, and came thither from the death of a deer that morning ; and intended, as usual, to make a stay there for two or three days.

There are, I know, many men of severe principles, and who are more strict, grave, and formal in their manner of thinking, than they are wise, who will be apt to judge of these relations as things merely fabulous and chimerical, and not contented with being disbelievers by themselves, will labour to insinuate into others this pernicious notion, that it is a sign of infirmity and weakness in the head to yield them credit. But though I could easily argue these Sir Gravities down, though a sentence or two would do their business, put them beyond the power of replying, and strike them dumb, yet do I think it not worth my while ; their greatest and most wanted objection against these Eudemons and Kakodemons, being, that it arises all from the work of fancy, in persons of a melancholic blood. If we consider the nature of this child's dialogue with me, will it not be more whimsically strange and miraeulous, to say that a child of nine years' old had only a fancy of such things as these, of which it had never heard anybody give an account, and that it could, by the mere strength of imagination, predict such things as really

after came to pass, than it is, when it does so strangely predict things, to believe the child does it in the manner itself owns it does, which is by the intervention of a good demon, or a happy genius. Departing, therefore, from these singular and wise men's opinions, who will believe nothing excellent can happen to others, which it has not been their lot to enjoy a share of, I shall take my farewell hastily of them, without losing my own time or theirs, in the words of the ingenious Monsieur le Clerc: *Acerbos homines non moror, indignos quippe, qui hæc studia tractent, aut quorum judicii ulla ratio habeatur.*

I shall rather see how far these things have lain open to the eyes of, and been explained by the ancient sages; I will relate who among them were happy in their genii, and who among the moderns, whose examples may be authorities for our belief; I will set down as clearly as I can what perception men have had of genii or spirits by the sense of seeing; what by the sense of hearing; what by the sense of feeling, touching, or tasting; and in fine, what perception others have had of these genii by all the senses, what by dreams, and what by magic, a thing rarely to be met with at once in any single man, and which seems particular to the child, who was the subject of our last little historical account. When I have brought examples and the opinions of wise philosophers, and the evidence of undeniable witnesses, which one would think sufficient to evince persons of the commerce men have with spirits, if they were not past all sense of conviction; I shall, not so much to corroborate what I say, as to shame some wisecracks, who would by their frail reason scan all things, and pretend to solve the mysteries ascribed to spirits, as facts merely natural, and who would banish from the thoughts of men all belief of spirits whatsoever, I shall, I say, in order to put to shame these wisecracks, if they have any shame left, produce the opinions of the Fathers as divines, show the doctrines of spirits in general to be consistent with Christianity, that they are delivered in the Scripture and by Christian tradition, in which, if they will not acquiesce, I shall leave them to the labyrinth of their own wild opinions, which in the end will so perplex their judgments of things, that they will be never able to extricate themselves; and these different heads will be the subject of the chapter ensuing; and will, or I am greatly mistaken, form both an instructive, edifying, and

entertaining discourse, for a reader really and truly intelligent, and that has a good taste and relish for sublime things.

CHAPTER V.

AN ARGUMENT PROVING THE PERCEPTION WHICH MEN HAVE, AND HAVE HAD, BY ALL THE SENSES, AS SEEING, HEARING, ETC., OF DEMONS, GENII, OR FAMILIAR SPIRITS.

It is said in the ninth book of the *Morals of Aristotle*, It is better to come at the probable knowledge of some things above us in the heavens, than to be capable of giving many demonstrations relating to things here below. This is no doubt an admirable proposition, and speaks the lofty aims of that sublime mind from whence it proceeded. Among all the disquisitions in this kind, none seem to me more excellent than those which treat concerning the genii that attend upon men, and guide them in the actions of life. A genius, or demon, of the good kind, is a sort of mediate being, between human and divine, which gives the mind of man a pleasant conjunction with angelic and celestial faculties, and brings down to earth a faint participation of the joys of heaven. That there have been such fortunate attendants upon wise men, we have many rare instances. They have been ascribed to Socrates, Aristotle, Plotinus, Porphyrius, Iamblicus, Chieus, Scaliger, and Cardan. The most celebrated of all these ancients, was Soerates; and as for his having a genius, or demon, we have the testimonies of Plato, Xenophon, and Antisthenes, his contemporaries, confirmed by Laertius, Plutarch, Maximus Tyrius, Dion Chrysostomus, Cicero, Apuleius, Feinus, and others; many of the moderns, besides Tertullian, Origen, Clemens Alexandrinus, Austin, and others; and Soerates himself, in Plato's *Theage*, says, By some divine lot I have a certain demon which has followed me from my childhood as an oracle; and in the same place intimates that the way he gained his instruction, was by hearing the demon's voice. Nothing is certainly so easy as for men to be able to contradict things, though never so well attested, with such an air of truth as to make the truth of the history doubted by others as well as themselves, where no demonstrative proof can be brought to convince them. This has been the easy

task of those who object against the demon of Socrates; but when no demonstrative proof is to had on either side, does not wisdom incline us to lean to the most probable? Let us then consider whether the evidences are not more credible, and witnesses of such a thing are not persons of more authority than these men are, who vouchsafe to give no reason but their own incredulity, for maintaining the contrary, and whether those, therefore, by the right rule of judging, ought not much sooner than these, to gain over our assent to their assertions?

We will, however, laying aside the histories of those ancient times, the sense whereof, by various readings and interpretations being put upon the words, is rendered obscure and almost unintelligible, descend to more modern relations, the facts whereof shall be placed beyond doubt, by reason of the evidences we will bring to attest them, and shall consequently prove the perception men have of spirits, or genii, by every sense.

SECTION I.

We will first begin as to the perception of spirits by the sight.

Mr. Glanvil, in his Collections of Relations, for proving Apparitions, Spirits, &c., tells us of an Irishman that had like to have been carried away by spirits, and of the ghost of a man, who had been seven years dead, that brought a medicine to his bed-side.

The relation is thus:—

A gentleman in Ireland, near to the Earl of Orrery's, sending his butler one afternoon to buy cards, as he passed a field, to his wonder, he espied a company of people sitting round a table, with a deal of good cheer before them, in the midst of the field; and he, going up towards them, they all arose and saluted him, and desired him to sit down with them; but one of them whispered these words in his ear: Do nothing this company invites you to. Hereupon he refused to sit down at the table, and immediately table and all that belonged to it were gone, and the company are now dancing and playing upon musical instruments. And the butler being desired to join himself with them, but he refusing this also, they all fall to work, and he not being to be prevailed with to accompany them in working, any more than in feasting or

dancing, they all disappeared, and the butler is now alone; but instead of going forwards, home he returns, as fast as he could drive, in a great consternation; and was no sooner entered his master's door, but he fell down and lay some time senseless, but coming again to himself, he related to his master what had passed.

The night following, there comes one of his company to his bed-side, and tells him, that if he offered to stir out of the doors the next day, he would be carried away. Hereupon he kept within; but towards the evening, having need to make water, he adventured to put one foot over the threshold (several standing by), which he had no sooner done but they espied a rope cast about his middle; and the poor man was hurried away with great swiftness, they following him as fast as they could, but could not overtake him; at length they espied an horseman coming towards him, and made signs to him to stop the man whom he saw coming near him, and both ends of the rope, but nobody drawing; when they met he laid hold of one end of the rope, and immediately had a smart blow given him over his arm with the other end; but by this means the man was stopped, and the horseman brought him back with him.

The Earl of Orrery hearing of these strange passages, sent to the master to desire him to send this man to his house, which he accordingly did; and the morning following, or quickly after, he told the earl that his spectre had been with him again, and assured him that that day he should most certainly be carried away, and that no endeavours should avail to the saving of him; upon this he was kept in a large room with a considerable number of persons to guard him, among whom was the famous stroaker, Mr. Greatrix, who was a neighbour. There were, besides other persons of quality, two bishops in the house at the same time, who were consulted concerning the making use of a medicine, the spectre or ghost prescribed, of which mention will be made anon, but they determined on the negative.

Till part of the afternoon was spent, all was quiet; but at length he was perceived to rise from the ground, whereupon Mr. Greatrix and another lusty man clapped their arms over his shoulders, one of them before him, and the other behind, and weighed him down with all their strength; but he was forcibly taken up from them, and they were too weak to keep

their hold, and for a considerable time he was carried into the air, to and fro over their heads, several of the company still running under him to prevent his receiving hurt if he should fall; at length he fell, and was caught before he came to the ground, and had by that means no hurt.

All being quiet till bed-time, my lord ordered two of his servants to lie with him, and the next morning he told his lordship, that his spectre was again with him, and brought a wooden dish with grey liquor in it, and bid him drink it off; at the first sight of the spectre he said he endeavoured to awake his bed-fellows; but it told him, that that endeavour should be in vain; and that he had no cause to fear him, he being his friend, and he that at first gave him the good advice in the field, which had he not followed, he had been before now perfectly in the power of the company he saw there; he added, that he concluded it was impossible but that he should have been carried away the day before, there being so strong a combination against him; but now he could assure him there would be no more attempts of that nature, but he being troubled with two sorts of sad fits, he had brought that liquor to cure him of them, and bid him drink it; he peremptorily refusing, the spectre was angry, and upbraided him with great disingenuity, but told him, however, he had a kindness for him, and that if he would take plantain juice he should be well of one sort of fits, but he should carry the other to his grave; the poor man having by this somewhat recovered himself, asked the spectre whether by the juice of plantain he meant that of the leaves or roots? It replied, The roots.

Then it asked him whether he did not know him? He answered, No; it replied, I am such a one; the man answered he had been long dead; I have been dead, said the spectre or ghost, seven years, and you know that I lived a loose life, and ever since, I have been hurried up and down in a restless condition with the company you saw, and shall be to the day of judgment; then he proceeded to tell him, that had he acknowledged God in his ways, he had not suffered such severe things by their means; and farther said, you never prayed to God before that day you met with this company in the fields.

This relation was sent to Dr. Henry More by Mr. E. Fowler, who said, Mr. Greatrix told it several persons; the Lord Orrery also owned the truth of it; and Mr. Greatrix told it

to Dr. Henry More himself, who particularly inquired of Mr. Greatrix about the man's being carried up into the air, above men's heads, in the room, and he did expressly affirm that he was an eye-witness thereof.

A vision which happened to the ingenious and learned Dr. Donne, may not improperly be here inserted. Mr. Isaac Walton, writing the life of the said doctor, tells us, that the doctor and his wife, living with Sir Robert Drury, who gave them a free entertainment at his house in Drury-lane, it happened that the Lord Hays was by King James sent in an embassy to the French King, Henry IV., whom Sir Robert resolved to accompany, and engaged Dr. Donne to go with them, whose wife was then with child, at Sir Robert's house. Two days after their arrival at Paris, Dr. Donne was left alone in that room in which Sir Robert and he and some other friends had dined together. To this place Sir Robert returned within half an hour; and as he left so he found Dr. Donne alone, but in such an ecstasy, and so altered in his looks, as amazed Sir Robert to behold him, insomuch that he earnestly desired Dr. Donne to declare what had befallen him in the short time of his absence. To which Dr. Donne was not able to make a present answer; but after a long and perplexed pause, did at last say, I have seen a dreadful vision, since I saw you; I have seen my dear wife pass twice by me, through this room, with her hair hanging about her shoulders, and a dead child in her arms; this I have seen since I saw you. To which Sir Robert replied, Sure, sir, you have slept since I saw you, and this is the result of some melancholy dream, which I desire you to forget, for you are now awake. To which Dr. Donne's reply was, I cannot be surer that I now live than that I have not slept since I saw you, and am as sure at her second appearing she stopped and looked me in the face and vanished. Rest and sleep had not altered Dr. Donne's opinion the next day; for he then affirmed this vision with a more deliberate and so confirmed a confidence, that he inclined Sir Robert to a faint belief that the vision was true, who immediately sent a servant to Drury house, with a charge to hasten back and bring him word whether Mrs. Donne were alive; and if alive, what condition she was in as to her health. The twelfth day the messenger returned with this account; that he found and left Mrs. Donne very sad and sick in bed, and that after a long and dangerous

labour she had been delivered of a dead child, and upon examination the abortion proved to be the same day, and about the very hour that Dr. Donne affirmed he saw her pass by in his chamber. Mr. Walton adds this, as a relation which will beget some wonder, and well it may, for most of our world are at present possessed with an opinion that visions and miracles are ceased, and though it is most certain that two lutes both being strung and tuned to an equal pitch, and then one played upon, the other, that is not touched, being laid upon the table at a fit distance, will, like an echo to a trumpet, warble a faint, audible harmony in answer to the same tune, yet many will not believe that there is any such thing as a sympathy with souls, &c.

SECTION II.

I shall next relate some little histories to show what perception men have had of spirits by the sense of hearing. For, as Wierus says, spirits appear sometimes invisibly, so that only a sound, voice, or noise, is perceived by men, viz., a stroke, knocking, whistling, sneezing, groaning, lamenting, or clapping of the hands, to make men attent to inquire or answer.

In Luther's *Colloquia Mensalia*, &c., set forth in Latin, at Frankfort, anno 1557, it being a different collection from that of Aurifaber, which is translated from high Dutch into English. We have the following relation:—

It happened in Prussia, that as a certain boy was born, there presently came to him a genius, or what you please to call it, for I leave it to men's judgments, who had so faithful a care of the infant, that there was no need either of mother or servant; and, as he grew up, he had a like care of him; he went to school with him, but so, that he could never be seen either by himself, or any others in all his life. Afterwards he travelled into Italy, he accompanied him, and whensoever any evil was like to happen to him, either on the road or in the inn, he was perceived to foretell it by some touch or stroke; he drew off his boots as a servant; if he turned his journey another way, he continued with him, having the same care of him in foretelling evil; at length he was made a canon; and as, on a time, he was sitting and feasting with his friends in much jollity, a vehement stroke was struck on a sudden on the table, so that they were all terrified; presently

the canon said to his friends, be not afraid, some great evil hangs over my head. The next day he fell into a great fever, and the fit continued on him for three whole days, till he died, miserably.

Captain Henry Bell, in his narrative prefixed to Luther's Table, printed in English, anno 1652, having acquainted us how the German copy printed of it had been discovered under ground, where it had lain hid fifty-two years, that edition having been suppressed by an edict of the Emperor Rudolphus the second, so that it was death for any person to keep a copy thereof; and having told us that Casparus van Spar, a German gentleman, with whom he was familiarly acquainted, while he negotiated affairs in Germany for King James the first, was the person that discovered it, anno 1626, and transmitted it into England to him, and earnestly desired him to translate the said book into English, says, he accordingly set upon the translation of it many times, but was always hindered from proceeding in it by some intervening business. About six weeks after he had received the copy, being in bed with his wife, one night, between twelve and one of the clock, she being asleep, but himself awake, there appeared to him an ancient man standing at his bed-side, arrayed all in white, having a long and broad white beard hanging down to his girdle, who taking him by his right ear, said thus to him: Sirrah! will you not take time to translate that book which is sent unto you out of Germany? I will shortly provide for you both place and time to do it; and then he vanished. Hereupon, being much affrighted, he fell into an extreme sweat, so that his wife awaking and finding him all over wet, she asked him what he ailed? He told her what he had seen and heard; but he never regarded visions nor dreams, and so the same fell out of his mind. But a fortnight after, being on a Sunday; at his lodging in King-street, Westminster, at dinner with his wife, two messengers were sent from the whole council-board, with a warrant to carry him to the Gate-house, Westminster, there to be kept till farther order from the lords of the council; upon which warrant he was kept there ten whole years close prisoner, where he spent five years of it in translating the said book, having good cause to be mindful of the old man's saying: I will shortly provide for you both place and time to translate it.

Though the perception of spirits chiefly affects the hearing

and seeing faculties, yet are not the other senses without some participation of these genial objects, whether good or evil; for, as St. Austin says, The evil work of the devil creeps through all the passages of the senses; he presents himself in figures, applies himself to colours, adheres to sounds, introduces odours, infuses himself in savours, and fills all the passages of intelligence; sometimes cruelly tormenting with grief and fear, sometimes sportingly diverting man or taunting with mocks; and on the other hand, as the learned Walter Hilton, a great master of contemplative life, in his Scale of Perfection sets forth, that appearances or representations to the corporeal senses may be both good and evil.

But before I conclude upon this head, to give still more weight and authority to the perception men have had of these genii, both by the senses of hearing and seeing, I will relate two very remarkable fragments of history of this kind, told us by persons who demand our credit, and done within the memory of our grandfathers and fathers.

The first is concerning that Duke of Buckingham who was stabbed by Felton, August the twenty-third, 1628.

Mr. Lilly, the astrologer, in his book entituled *Monarchy or No Monarchy*, in England, printed in quarto, 1651; having mentioned the Duke of Buckingham, writes as follows: Since I am upon the death of Buckingham, I shall relate a true story, of his being admonished often of the death he should die, in this manner:—

An aged gentlemen, one Parker, as I now remember, having formerly belonged unto the duke, or of great acquaintance with the duke's father, and now retired, had a demon appeared several times to him in the shape of Sir George Villiers, the duke's father: this demon walked many times in Parker's bedchamber, without any action of terror, noise, hurt, or speech; but at last, one night, broke out in these words: Mr. Parker, I know you loved me formerly, and my son George at this time very well, I would have you go from me, you know me very well to be his father, old Sir George Villiers of Leicestershire, and acquaint him with these and these particulars, &c.; and that he above all refrain the council and company of such and such, whom he then nominated, or else he will come to destruction, and that suddenly. Parker, though a very discreet man, partly imagined himself in a dream all this time; and being unwilling to proceed upon

no better grounds, forbode addressing himself to the duke; for he conceived, if he should acquaint the duke with the words of his father, and the manner of his appearance to him, such apparitions being not usual, he should be laughed at and thought to dote, in regard he was aged. Some few nights past without farther trouble to the old man, but not very many nights after, old Sir George Villiers appeared again, walked quick and furiously in the room, seemed angry with Parker, and at last said, Mr. Parker, I thought you had been my friend so much, and loved my son George so well, that you would have acquainted him with what I desired, but I know you have not done it; by all the friendship that ever was betwixt you and me, and the great respect you bear my son, I desire you to deliver what I formerly commanded you to my son. The old man seeing himself thus solicited, promised the demon he would, but first argued it thus, that the duke was not easy to be spoken withal, and that he would account him a vain man to come with such a message from the dead: nor did he conceive the duke would give any credit to him; to which the demon thus answered: If he will not believe you have this discourse from me, tell him of such a secret, and named it, which he knows none in the world ever knew but myself and him. Mr. Parker being now well satisfied that he was not asleep, and that the apparition was not a vain delusion, took a fit opportunity, and seriously acquainted the duke with his father's words and the manner of his apparition. The duke laughed heartily at the relation, which put old Parker to a stand, but at last he assumed courage, and told the duke that he acquainted his father's ghost with what he found now to be true, viz., scorn and derision. But, my lord, says he, your father bid me acquaint you by this token, and he said it was such as none in the world but your two selves did yet know. Hereat the duke was amazed and much astonished, but took no warning or notice thereof, keeping the same company still, advising with such counsellors and performing such actions as his father by Parker countermanded. Shortly after, old Sir George Villiers, in a very quiet but sorrowful posture, appears again to Parker, and said, Mr. Parker, I know you delivered my words to George, my son, I thank you for so doing, but he slighted them, and now I only request this more at your hands, that once again you repair to my son, and tell him that if he will not amend, and

follow the counsel I have given him, this knife or dagger, and with that he pulled a knife or dagger from under his gown, shall end him; and do you, Mr. Parker, set your house in order, for you shall die at such a time. Mr. Parker once more engaged, though very unwillingly, to acquaint the duke with the last message, and so did; but the duke told him to trouble him no farther with such messages and dreams, and told him he perceived he was now an old man and doted; and within a month after, meeting Mr. Parker on Lambeth bridge, said, Now, Mr. Parker, what say you of your dream? Who only returned; Sir, I wish it may never have success, &c. But within six weeks after, he was stabbed with a knife, according to his father's admonition beforehand, and Mr. Parker died soon after he had seen the dream or vision performed.

This relation is inserted also in the great Lord Clarendon's History, and in Sir R. Baker's Chronicle. The Lord Clarendon, in his History, vol. i. lib. i., having given some relations, says, that amongst others, there was one, meaning this of Parker, which was upon a better foundation of credit than usually such discourses are founded upon. And he tells us that Parker was an officer in the king's wardrobe in Windsor Castle, of a good reputation for honesty and discretion, and then about the age of fifty years or more. This man had, in his youth, been bred in a school in the parish where Sir George Villiers, the father of the duke lived, and had been much cherished and obliged in that season of his age by the said Sir George, whom afterwards he never saw. About six months before the miserable end of the Duke of Buckingham the apparition was seen. After the third appearance, he made a journey to London, where the court then was; he was very well known to Sir Ralph Freeman, one of the masters of the requests, who had married a lady that was nearly allied to the duke, and was himself well received by him. He informed the duke with the reputation and honesty of the man, and Sir Ralph Freeman carried the man the next morning, by five of the clock, to Lambeth, according to the duke's appointment, and there presented him to the duke, who received him courteously at his landing, and walked in conference near an hour with him, and Sir Ralph's and the duke's servants at such a distance that they heard not a word; but Sir Ralph always fixed his eyes on the duke, who sometimes spoke with great commotion and disorder; and

the man told Sir Ralph in their return over the water, that when he mentioned those particulars that were to gain him credit, the duke's colour changed, and he swore he could come to that knowledge only by the devil; for that those particulars were known only to himself and to one person more, who, he was sure, would never speak of them. So far the Lord Clarendon.

I will now subjoin an authentic relation, which Mr. Beaumont tells us at the end of his book of Genii, or Familiar Spirits, printed in the year 1705, he had just before received from the mouth of the then Bishop of Gloucester himself. It is as follows, word for word:—

Sir Charles Lee, by his first lady, had only one daughter, of which she died in childbirth; and when she died, her sister, the Lady Everard, desired to have the education of the child; and she was by her very well educated till she was marriageable; and a match was concluded for her with Sir William Perkins, but was then prevented in an extraordinary manner. Upon a Thursday night, she thinking she saw a light in her chamber after she was in bed, knocked for her maid, who presently came to her; and she asked why she left a candle burning in her chamber? The maid said she left none, and there was none, but what she brought with her at that time. Then she said it was the fire; but that the maid told her was quite out, and said she believed it was only a dream: whereupon she said it might be so, and composed herself again to sleep; but about two of the clock she was awakened again, and saw the apparition of a little woman between her curtain and her pillow, who told her she was her mother, and that she was happy, and that by twelve of the clock that day she should be with her; whereupon she knocked again for her maid, called for her clothes, and when she was dressed, went into her closet, and came not out again till nine; and then brought out with her a letter, sealed, to her father, brought it to her aunt, the Lady Everard, told her what had happened, and desired that, as soon as she was dead, it might be sent to him; but the lady thought she was suddenly fallen mad; and thereupon sent presently away to Chelmsford for a physician and surgeon, who both came immediately, but the physician could discern no indication of what the lady imagined, or of any indisposition of her body; notwithstanding, the lady would needs have her

let blood, which was done accordingly; and when the young woman had patiently let them do what they would with her, she desired that the chaplain might be called to read prayers, and when prayers were ended, she took her guitar and psalm book, and sat down upon a chair without arms, and played and sung so melodiously and admirably, that her music master, who was then there, admired at it; and near the stroke of twelve, she rose and sat herself down in a great chair with arms, and presently fetching a strong breathing or two, immediately expired, and was so suddenly cold as was much wondered at by the physician and surgeon. She died at Waltham, in Essex, three miles from Chelmsford; and the letter was sent to Sir Charles, at his house in Warwickshire; but he was so afflicted with the death of his daughter, that he came not till she was buried: but when he came he caused her to be taken up, and to be buried by her mother at Edmonton, as she desired in her letter. This was about the year one thousand six hundred and sixty-two or sixty-three; and this relation the Right Reverend the Lord Bishop of Gloucester had from Sir Charles Lee himself; and Mr. Beaumont printed it in his book above mentioned, from the bishop's own mouth.

The relations which I have given above, are not like the trifling accounts too often given of these things, and therefore causing grave ones to be ridiculed in common with them. They are of that nature, that, whoever attempts to ridicule them, will, instead of turning them into jest, become the object of ridicule himself.

The first story, which has in it such amazing circumstances, and such uncommon and dreadful incidents concerning the butler in Ireland, is, as the reader sees, attested by no less a personage than an Earl of Orrery, two bishops, and many other noblemen and gentlemen being present and eyewitnesses of what the earl said. What greater testimony would the most incredulous have? They say such things are told for interest. What interest could an earl and many noblemen have in promoting such an imposture? The incredulous say, likewise, great and learned men delight sometimes in putting frauds upon the world, and after laugh at their credulity. Would a number of noble laymen choose two prelates to carry on such a fraud; and would two pious bishops probably combine with several, and some

servants there present, in spreading such a deceit? **It is** past believing, and it demands the strictest of moral faith that can be given to the most unquestioned history that the pen of man ever wrote.

The second story is founded, first, upon the experience of one of the most ingenious men of that age, Dr. Donne, and then upon the proof made by his friend Sir Robert Drury, who could at first scarce believe it; and shall we doubt the credit of men, whose company, for their credit be it spoken, a British ambassador was proud of gaining.

The third story is told by Luther himself, who began the great work of the Reformation.

The fourth is told by one that was a king's public minister and told from his own trial of the matter, where he could have no interest in the telling it.

The fifth is related by those great historians, the Lord Clarendon and Sir Richard Baker, as a truth relied upon by themselves, and fit to be credited by their readers.

The sixth and last was related to Mr. Beaumont, by the Lord Bishop of Gloucester, who received the account from Sir Charles Lee himself, to whose granddaughter the matter happened.

Men who will not believe such things as these, so well attested to us, and given us by such authorities, because they did not see them themselves, nor anything of the like nature, ought not only to deny the demon of Socrates, but that there was such a man as Socrates himself; they should not dispute the genii of Cæsar, Cicero, Brutus, Marc Antony, but avow that there were never any such men existing upon earth, and overthrow all credible history whatsoever. Meanwhile, all men, but those who run such lengths in their fantastical incredulity, will, from the facts above mentioned, rest satisfied that there are such things as evil and good genii, and that men have sometimes a commerce with them by all their senses, particularly those of seeing and hearing, and will not therefore be startled at the strange fragments of histories which **I** am going to relate of our young Duncan Campbell, and look upon some wonderful adventures which he performed by the intervention of his familiar demon or genius, as falsehoods, only because they are uncommon and surprising, more especially since they were not done in a corner, but by an open way of profession of a predictor of things, in the face of the

metropolis of London, where he settled young, as will appear in the progress of his life. However, some people, notwithstanding all this, may allege, that though a man may have a genius appear to him, so as to convey into his mind, through his senses, the knowledge of things that are to come to pass, yet this happens but on very eminent and extraordinary occasions. The murder, for example, of a prime minister, and the favourite of a monarch, in such a manner as it was performed on the great Duke of Buckingham, by Felton, was a thing so uncommon, that it might perhaps deserve, by the permission of Heaven, an uncommon prediction; the others likewise are instances eminent in their way, particularly that of the lady Everard's niece; for that young lady being then marriageable, and a treaty for that end being on foot with Sir William Perkins, the Divine Providence foreseeing that such a state might call away her thoughts, hitherto bent on him and spiritual affairs, and fix them on the trifles of this world, might perhaps permit her to be called by a holy mother to the state of happiness she before her enjoyed, lest her daughter's mind should change, and she go into the ways of a sinner. But if these supereminent, these scarce and rare examples, may be admitted of man's holding a conversation with the spiritualized beings of another world; it will, however, be far below the dignity of human reason, methinks, to make such large concessions to people who pretend to converse that wonderful way, as to allow them the credit of being able to do it upon every slight occasion, and every indifferent occurrence of human life.

I cannot help acknowledging, that a man of wisdom may at first thought, make such an objection; but reflection will presently retract it, and the same good sense that taught him to make an objection so well upon the first thought, will teach him, upon second thoughts, to acquiesce in the answer.

Infants may have, no doubt, the benefit of such an attending genius, as well as people more advanced in years; as may be seen in one of the instances, which is a very famous one, relating to the boy born in Prussia, who was attended by one constantly, from the time of his birth to his death. Besides, it is a mistake in the understanding to imagine, that death, which is the determination and end of life, is of more consequence to be known than the manner of regulating that life; for in reality, according to the right way of considering death, or the determination of a man's life, derives its importance

from the steps which he took in the due regulation of it; and therefore, every, the least step proper to be taken for the due regulation of life, is of more consequence to be known than the death of a person, though this at first sight carries the face of significance, and the other nothing better than the look of a trifle. Marriage, for example, is a step in life of the utmost importance, whether we consider that estate with regard to this, or the next world. Death is but the finishing of one person, but marriage may be the introducing of many into the world with happiness; it is therefore a thing of more importance to be known before-hand, and consequently more worthy of the communication of a genius, to the man with whom he conversed. Posidonius tells us, that a certain Rhodian dying, nominated six of his equals, and said who should die first, who next, and so on, and the event answered the prediction; why, then, though some people are apt to make a jest of it, may not a man, by the intervention of his good genius, tell a woman that is to have six husbands, who she shall have first, who next, and so on, and the event answer the prediction? If men of learning may acquire such knowledge as to attain to extraordinary things by their ordinary faculties, why may not ordinary things be taught others in this extraordinary way? For will anybody say that it is easier for a man to accommodate himself to the knowledge of a demon or genius than for a demon or genius to accommodate himself to the knowledge of a man? Certain it is, indeed, that if this good genius, that induces a man with a prophetic kind of science, be anything resembling a good angel, the primary end of his being permitted to direct mankind must consist in things relating more to their welfare hereafter: yet I know not why they may not sometimes inspire, or openly direct them in human knowledge, and in things relating to human life, so they are of a good tendency; more especially since such a good inspiration may be a counterbalance to the bad knowledge which some have been inspired with by evil spirits. I would not be thought to go too far in a point of this nature, and have, therefore, though perhaps I could say much more if I followed entirely my own private opinion, and would venture to introduce it here, in order to communicate it to others, and make it a public one, said no more on this head than what divines generally teach.

But the most unexceptionable mistress, that teaches these

things to be in nature, is experience. If we had very many people gifted this way, the extraordinary thing would have been become ordinary, and therefore I cannot help wondering that it should be so ordinary a thing for wise men themselves to wonder too much at things because they are extraordinary, and suspect them as frauds because they are uncommon.

There has scarce been any period of time in which some person of this prophetic class has not existed, and has not been consulted by the greatest of men, and their predictions found at the long run to come true; ignorant men always rise to their belief of them by experience, and the most learned men submit their great opinions to experience, but your men of middling talents, who make up their want of reason with bustling obstinacy and noisy contradiction, have been and still continue to be their own opposers, and without discovering the reason for what they say, they content themselves with having the laugh on their sides, and barely affirming without proving, that it is a kind of ideal juggle and intellectual legerdemain, by which these modern predictors impose things upon the eye of reason, as the corporeal eye is imposed upon by sleight of hand; but it is a strange thing that men of such quick reason cannot give us a sample of the frauds. Thus, I remember to have read, I cannot tell where, the story of some courtiers, who, when a great artist of legerdemain was to act before the King, pretended to be so quick-sighted, that nothing he did should escape their discovery, were left by his nimble fingers in the dark, and forced at last with blushes to own they had no better eyes than other people. In a word, if people will be led by suspicions and remote possibilities of fraud and contrivance of such men, all historical truth shall be ended, when it consists not with a man's private humour or prejudice to admit it. Now, therefore, to prove by experience and undeniable testimonies, that these kind of genii will submit to little offices, in order to bring men to greater good, I will give three or four curious passages that will set the reasonable reader at ease, and prepare him for reading the passages of Mr. Campbell's life with pleasure, and as a fine history of wonderful facts, that, though they seem to surpass belief, yet ought to have his credit.

What in nature can be more trivial than for a spirit to employ himself in knocking on a morning at a wainscot by

the bed's-head of a man who got drunk over-night, according to the way that such things are ordinarily explained? And yet I shall give you such a relation of this, that not even the most devout and precise Presbyterian will offer to call in question. For Mr. Baxter, in his *Historical Discourse of Apparitions*, writes thus:—

There is now in London an understanding, sober, pious man, oft one of my hearers, who has an elder brother, a gentleman of considerable rank, who, having formerly seemed pious, of late years does often fall into the sin of drunkenness, he often lodges long together here in his brother's house; and whensoever he is drunk and has slept himself sober, something knocks at his bed's-head, as if one knocked on a wainscot; when they remove his bed it follows him; besides other loud noises, on other parts where he is, that all the house hears; they have often watched him, and kept his hands lest he should do it himself. His brother has often told it me, and brought his wife, a discreet woman, to attest it; who avers, moreover, that as she watched him, she has seen his shoes under the bed taken up, and nothing visible to touch them. They brought the man himself to me, and when we asked him how he dare sin again after such a warning, he had no excuse: but being persons of quality, for some special reason of worldly interest, I must not name him.

Two things are remarkable in this instance, says Mr. Baxter. First, what a powerful thing temptation and fleshly concupiscence is, and what a hardened heart sin brings men to; if one rose from the dead to warn such sinners, it would not of itself persuade them.

Secondly, says Mr. Baxter, it poses me to think what kind of spirit this is that has such a care of this man's soul, which makes me hope he will recover. Do good spirits dwell so near us, or are they sent on such messages? or is it his guardian angel? or is it the soul of some dead friend that suffers? and yet, retaining love to him, as Dives to his brethren, would have him saved? God yet keeps such things from us in the dark.

So far we have the authority of the renowned and famous Mr. Baxter, who makes this knocking of the spirit at the bed's-head, though what we commonly call frivolous, an important errand.

Another relation of this kind was sent to Mr. John Beau-

mont, whom I myself personally know, and which he has inserted in his Account of Genii, or Familiar Spirits, in a letter by an ingenious and learned clergyman of Wiltshire, who had given him the relation likewise before, by word of mouth. It is as follows :—

Near eighty years since, in the parish of Wilcot, which is by Devizes, in the vicar's house, there was heard for a considerable time the sound of a bell constantly tolling every night. The occasion was this: A debauched person who lived in the parish came one night very late and demanded the keys of the church of the vicar, that he might ring a peal, which the vicar refused to let him have, alleging the unseasonableness of the time, and that he should, by granting his desires, give a disturbance to Sir George Wroughton and his family, whose house adjoined the churchyard. Upon this refusal, the fellow went away in a rage, threatening to be revenged of the vicar, and going some time after to Devizes, met with one Cante or Cantlow, a person noted in those days for a wizard, and he tells him how the vicar had served him, and begs his help to be even with him. The reply Cante made him was this; Does he not love ringing? he shall have enough of it: and from that time a bell began to toll in his house, and continued so to do till Cante's death, who confessed at Fisherton gaol, in Sarum, where he was confined by King James during his life, that he caused that sound, and that it should be heard in that place during life. The thing was so notorious that persons came from all parts to hear it; and King James sent a gentleman from London on purpose to give him satisfaction concerning the truth of the report. Mr. Beaumont had likewise this story, as he tells, from the mouth of Sir George Wroughton's own son; with this remarkable circumstance, that if any in the house put their heads out of the window they could not hear the sound, but heard it immediately again as soon as they stood in the room.

The reader here sees that good and bad genii exercise themselves upon very little functions, knocking at bed's-heads, and ringing of bells. For proof of this we have the testimonies of two divines, of a man of quality and probity, and the same satisfaction that a learned king had, who sent to inquire into the matter; and after this there can be, I think, no room for doubt.

But to carry the point still nearer home; inasmuch as I know some will leave no stone unturned to make the extraordinary actions which the person whose life I write has performed, appear impostures, and inasmuch as for this end they may say, that though many people may have been gifted in this extraordinary manner, yet not so as to make a profession of it, and therefore, from thence they take their suspicions, I shall in this place, to remove every nicest scruple they can have touching this affair, give the reader one instance of this kind likewise, before I proceed with my history.

There lived not many years since a very aged gentlewoman in London, in Water-lane, by Fleet-street, whose name was Pight, who was endowed with a prophetic spirit; and the ingenious Mr. Beaumont, whom I personally knew, and who had a familiar genius himself, gives the world this account of her. She was very well known, says he, to many persons of my acquaintance now living in London. Among others, a gentleman, whose candour I can no way suspect, has told me, that he often resorted to her as to an oracle; and that as soon as he came into her presence, she would usually tell him, that she knew what he was coming for, for that she had seen his spirit for some time before; and without his saying anything to her, she would commonly tell him what the business was which he came to consult her about, and what the event of it would be; which he always found to fall out as she said, and many other persons now living can testify the like experience of her as to themselves.

Before I conclude this chapter, I am willing to give the public one farther little history of the like kind with the foregoing ones, with this only difference, that if it be valued according to the worth the world has always attributed to the very ingenious person whom it concerns, it will be far the most famous of them all, and therefore fittest to finish this chapter, and to crown this part of the work, in which we are showing that persons have had a perception of genii or spirits, not visible at the same time to others.

The famous Torquatus Tasso, Prince of the Italian poets, and scarce inferior to the immortal Virgil himself, and who seems to enjoy the intermingled gifts of the most accurate judgment of this Latin poet, and the more fertile and copious invention and fancy of the Greek one, Homer, strongly as-

serted his own experience in this kind. His life was written and published in French, anno 1692, by D.C. D. D.V. who, in his preface, tells us, that in what he writ he has followed chiefly the history given us in Italian by John Baptista Manso, a Neapolitan gentleman, who had been a very intimate friend to Tasso. In his life, among other things, he acquaints us that Tasso was naturally of that melancholic temperament, which has always made the greatest men, and that this temperament being aggravated by many hardships he had undergone, it made him sometimes beside himself, and that those melancholic vapours being despatched, he came again to himself, like those that return from fits of the falling sickness, his spirit being as free as before. That, near his latter end, he retired from the city of Naples, to his friend Manso, at Bisaccia, a small town in the kingdom of Naples, where Manso had a considerable estate, and passed an autumn there in the diversions of the season.

And here the French author gives us an account of Tasso's sensible perception of a genius, as follows:—As after these amusements, he usually retired to his chamber, to entertain himself there with his friend Manso, the latter had the opportunity to inquire into one of the most singular effects of Tasso's melancholy, of this heroic melancholy, as I may call it, which raised and brightened his spirit, so far it was from depressing or rendering it obscure; and which, among the ancients, would have reasonably caused them to have ascribed a familiar demon to him, as to Socrates. They were often in a warm debate concerning this spirit, with which Tasso pretended to have so free a communication. I am too much your friend, said Manso to him one day, not to let you know what the world thinks of you concerning this thing, and what I think of it myself. Is it possible, that being enlightened as you are, you should be fallen into so great a weakness as to think you have a familiar spirit; and will you give your enemies that advantage, to be able to prove by your own acknowledgment, what they have already published to the world? You know, they say, you did not publish your Dialogue of the Messenger, as a fiction; but you would have men believe that the spirit which you make to speak there, was a real and true spirit; hence men have drawn this injurious consequence, that your studies have embroiled your imagination, so that there is made in it a con-

fused mixture of the fictions of the poets, the inventions of the philosophers, and the doctrine of religion.

I am not ignorant, answered Tasso, of all that is spread abroad in the world on account of my Dialogue; I have taken care divers times to disabuse my friends, both by letter and word of mouth: I prevented even the malignity of my enemies, as you know at the time I published my Dialogue. Men could not be ignorant that I composed it for the young Prince of Mantua, to whom I would explain after an agreeable manner, the principal mysteries of the Platonic philosophy. It was at Mantua itself, after my second flight from Ferrara, that I formed the idea of it, and I committed it to paper a little after my unfortunate return. I addressed it to this prince, and all men might have read in the epistle dedicatory, the protestation I there make, that this dialogue, being written according to the doctrine of the Platonics, which is not always conformable to revealed truths, men must not confound what I expose there as a philosopher, with what I believe as a Christian. This distinction is by so much the more reasonable, that at that time nothing extraordinary had happened to me, and I spake not of any apparition. This can be attested by all those with whom I lodged, or whom frequented in this voyage; and therefore there is no reason for confounding the fiction of my Dialogue with what has happened to me since. I am persuaded of all you say to me, replied Manso; but truly I cannot be of what you believe, at present, concerning yourself. Will you imagine that you are in commerce with a spirit? And I ask you, of what order is that spirit? Shall we place him in the number of the rebels, whom their pride precipitated into the abyss? or of the intelligences, who continued firm in faith and submission to their creator? For there is no mean to take in the true religion, and we must not fall into the extravagances of the gnomes and sylphs of the cabalists.

Now the spirit in question cannot be a demon: you own that instead of inspiring you anything contrary to piety and religion, he often fortifies in you the maxims of Christianity: he strengthens your faith by profound reasonings, and has the same respect with you for sacred names and things. Neither can you say that it is an angel; for though you have always led a regular life, and far from all dissoluteness; though for some years past you have applied yourself, after a

particular manner, to the duties of a true Christian, you will agree with me, that these sorts of favours are not common; that a man must have attained to a high degree of sanctity, and not be far from the pureness of celestial spirits, to merit a familiar converse, and bear a harmony with them. Believe me, there is nothing in all these discourses which you imagine you have with this spirit. You know, better than any man, those symptoms which the black humours wherewith you are tormented causes in you. Your vapours are the source of your visions, and yourself would not judge otherwise of another person to whom a like thing should happen; and you will come to this in your own respect also, if you will make a mature reflection, and apply yourself to blot out, by an effort of reason, these imaginations which the violence of your evil effect causes in you. You may have reason, replied Tasso, to think so of the things that pass in me; but as to myself, who have a sensible perception of them, I am forced to reason after another manner. If it were true that the spirit did not show himself to me, but in the violent assault of my vapours; if he offered to my imagination but wandering and confused species, without connection or due sequel; if he used to me frivolous reasonings, which ended in nothing; or if having begun some solid reasoning he broke it off on a sudden, and left me in darkness, I should believe with you, that all things that pass are but mere dreams and phantoms; but it is quite otherwise. This spirit is a spirit of truth and reason, and of a truth so distinct, of a reason so sublime, that he raises me often to knowledges that are above all my reasonings, though they appear to me no less clear; that he teaches me things which, in my most profound meditations, never came into my spirit, and which I never heard of any man, nor read in any book. This spirit, therefore, is somewhat of real; of whatsoever order he be, I hear him and see him, nevertheless for its being impossible for me to comprehend and define him. Manso did not yield to these facts, which Tasso would have passed for proofs; he pressed him with new questions, which were not without answers. Since you will not believe me on my word, said Tasso to him another day, after having well disputed, I must convince you by your own eyes, that these things are not pure imaginations: and the next day, conversing together in the same chamber, Manso perceived that, on a sudden, he fixed his eyes towards

the window, and that he stood, as it were, immoveable; he called to him and jogged him many times, but instead of answering him; See there the spirit, says Tasso, at last, that has been pleased to come and visit me, and to entertain himself with me; look on him, and you will acknowledge the truth of what I say.

Manso, somewhat surprised, cast his eyes towards the place he showed him, and perceived nothing but the rays of the sun passing through the glass, nor did he see anything in all the chamber; though he cast his eyes round it with curiosity, and he desired him to show him the spirit, which he looked for in vain, while he heard Tasso speak with much vehemency. He declares in a letter which he writ concerning this to the Admiral of Naples, that he really heard no other voice but Tasso's own; but they were sometimes questions made by him to the pretended spirit, sometimes answers that he made to the pretended questions of the spirit, and which were couched in such admirable terms, so efficacious, concerning subjects so elevated, and so extraordinary, that he was ravished with admiration, and dared not to interrupt him. He hearkened, therefore, attentively, and being quite beside himself at this mysterious conversation, which ended at last by a recess of the spirit, as he found by the last words of Tasso; after which, Tasso, turning himself to him, Well, said he, are your doubts at last dissipated? On the contrary, answered Manso, I am more embroiled than ever; I have truly heard wonderful things; but you have not showed me what you promised me. You have seen and heard, resumed Tasso, perhaps more than ——he stopped here; and Manso, who could not recover himself of his surprise, and had his head filled with the ideas of this extraordinary entertainment, found himself not in a condition to press him farther. Meanwhile he engaged himself not to speak a word to any man of these things he had heard, with a design to make them public, though he should have liberty granted him. They had many other conversations concerning this matter, after which Manso owned he was brought to that pass, that he knew not what to think or say, only, that if it were a weakness in his friend to believe these visions, he much feared it would prove contagious to him, and that he should become at last as credulous as himself.

Dr. Beaumont, who is still living, and with whom I have

had formerly some acquaintance myself, has set down, among the others, this relation at large concerning Tasso, and gives this reason for it: Because, says the doctor, I think it contains a sufficient answer to what many learned friends have said to myself on the like occasion.

Perhaps it may not be ungrateful to the reader, if I subjoin here the short eulogium writ on Tasso, by the famous Thuanas, which is as follows:—

Torquatus Tasso died about the forty-fifth year of his age, a man of a wonderful and prodigious wit, who was seized with an incurable fury in his youth, when he lived at the court of Ferrara, and nevertheless, in lucid intervals, he writ many things both in verse and prose, with so much judgment, elegancy, and extreme correctness of style, that he turned at length that pity which many men had conceived for him, into an amazement; while by that fury, which, in others, makes their minds outrageous or dulls them, after it was over, his understanding became as it were more purified, more ready in inventing things, more acute in aptly disposing them after they were invented, and more copious in adorning them with choice words and weight of sentences; and that which a man of the soundest sense would scarce excogitate at his leisure, with the greatest labour and care imaginable, he, after a violent agitation of the mind set beside itself, naturally performed with a wonderful felicity, so that he did not seem struck with an alienation of mind, but with a divine fury. He that knows not these things, which all men know that have been in Italy, and concerning which himself sometimes complains, though modestly, in his writings; let him read his divine works, and he must necessarily conclude, either that I speak of another man than Tasso, or that these things were written by another man than Tasso.

After having given my readers so many memorable accounts concerning the perception men have had in all ages, and still continue to have of genii or familiar spirits, by all the senses, as seeing, hearing, &c., which accounts have been attested by men of the greatest learning and quality, if any of them still remain dissatisfied, I am contented, and desire them, for their punishment, to lay down the book before they arrive at the more pleasant parts of it, which are yet to come, and not to read one tittle farther. These unbelieving gentlemen shall then be at liberty, according as their different spirits dictate,

to ridicule me in the same manner as many more learned and greater men than I have been satirized, before my time, by persons of a like infidel temper, who would fain pass incredulity upon the world as wisdom; and they may, with all the freedom in nature, bestow upon me those merry appellations which, I very well know such extraordinary freethinkers imagine to belong of right, to any author, that either believes himself, or would possess the world with an opinion and belief, that there is such a thing as the holding commerce and conversation in this habitable world with genii, and familiar spirits. I shall only first tell them all I have to say to terminate the dispute between them and me.

Those who, to give themselves the air and appearance of men of solid wisdom and gravity, load other men, who believe in spirits, with the titles of being men of folly, levity, or melancholy, are desired to learn, that the same folly, as they are pleased to term it, of opinion, is to be found in the greatest men of learning that ever existed in the universe. Let them, in order to be convinced of this, read Apuleius's book, *de deo Socrat.*; Censorinus's book *de die Nat.* c. 3; Porphyrius, in his book *de Abstinencia*; Agrippa, in his *Treatise de Occult. Phil.* 1. 3, c. 22, and also c. 21; Natalis comes in his *Myth.* 1. 4, c. 3; Maraviglia, in his *Pseudomantia. Dissertation.* 9 and 11, and *Animadversion.* 10; Plato in his *Timæus et Cratylus*; Ammianus Marcellinus's *History*, book 21; Hieronimus Cardanus in his book *de Vita Propria*, c. 47; the great Kircher, in his *Œdipus Ægyptiacus*, vol. iii. p. 474; Pausanias, in *Cliac. Poster.*; that immortal orator, Cicero, lib. i. *de Divinatione*; lib. ii. *de Natura Deorum*; the *Histoire Prodigieuse*, written by Pere Arnault; and a book entituled *Lux e Tenebris*, which is a collection of modern visions and prophecies in Germany by several persons, translated into Latin, by Jo. Amos. Comenius, printed at Amsterdam, 1655. And if they will be at the pains of having due recourse to these quotations, they will find that all these men, whose learning is unquestionable, and most of whom have been in a firm and undisputed possession of fame for many centuries, have all unanimously agreed in this opinion, how foolish soever they may think it, that there ever was and ever would be a communication held between some select men and genii, or familiar spirits. I must therefore desire their pardon, if I rejoice to see them remain wise by themselves, and that I

continue to be esteemed by them a fool among so much good company.

Others out of a mere contempt of religion, or cowardly, for fear of being thought pusillanimous by men, turn bravos to Heaven, and laugh at every notion of spirits as imbibed from the nurse or imposed upon us by priests, and may top these lines upon us with an elegant and a convincing magisterial sneer, though the divine Socrates was of our opinion, and even experienced it to be true, having a genius himself:—

The priests but finish what the nurse began,
And thus the child imposes on the man.

These bring into my mind a saying of Sir Roger L'Estrange on Seneca, which I must apply to Socrates; I join in opinion with a Christian heathen, while they remain heathen Christians.

The third sort, out of a pretended veneration to religion and divinity, may call me superstitious and chimerical. To them I answer, I will continue chimerical and superstitious with St. Austin; who gives the same opinion in his *Civitate Dei* with Ludovicus Vives; let them be solider and more religious divines than St. Austin in disowning it. Thus I bid these austere critics heartily farewell; but let my better-natured readers go on and find a new example of this conversation being held with the genii by our Duncan Campbell.

CHAPTER VI.

A NARRATIVE OF MR. CAMPBELL'S COMING TO LONDON AND
TAKING UPON HIM THE PROFESSION OF A PREDICTOR;
TOGETHER WITH AN ACCOUNT OF MANY STRANGE THINGS
THAT CAME TO PASS JUST AS HE FORETOLD.

To proceed on regularly with the life of young Duncan Campbell, I must let the reader know that he continued thus conversing with his little genius, as is set forth above in the dialogue he had with me, and predicting many things of the like nature, as I have described, till the year 1694, when he was just fourteen years of age, and then he left Scotland.

But before I come to speak of the manner of his departure from thence, his half native country, inasmuch as his father

was of that country, and he had his education there, what education he could have, being deaf and dumb. I must let the reader know that in the year 1692, my very good friend, Mrs. Campbell, his mother-in-law, died, and left him there at Edinburgh, an orphan of twelve years of age.

He was, I may venture to say, the most beautiful boy of that age I ever knew; and the sensible reader, who considers a child of good birth, with the misfortunes of being deaf and dumb, left fatherless and motherless in the wide world, at twelve years old, without any competency for his maintenance and support, without any relations, in a manner, that knew him or assisted him; all the little fortune his father had having been lost in the civil commotions in Scotland, as I have related above, need not hear me describe the compassion I and many more had for him; because such a reader must certainly feel in his own bosom the same lively acts of pity and commiseration at the hearing of such a mishap as I had at the seeing it, or at least as I have now revived afresh within me at the relating it.

However, it came so to pass, that a person of the name of Campbell, and who was a distant relation of the boy, though he himself was but in indifferent circumstances, was resolved to see him provided for one way or another, in a manner somewhat suitable to his condition, and till that time to take the best care of him himself that he was able.

Several ladies of quality who had known his perfections, coveted to make the boy one of their domestics, as a page, or a playfellow to their children; for though he could not speak, he had such a vivacity in all his actions, such a sprightliness of behaviour, and such a merriment accompanying all his gestures, that he afforded more entertainment than the prettiest and wittiest little prattlers at those years are wont to do. Mr. Campbell had certainly accepted of some of these fortunate offers for his little cousin, which were many of them likely to prove very advantageous, if it had not been put in his head by some friends, particularly myself, that if he had a mind to dispose of the boy in that manner, the best way he could take would be to present him to the late Earl of Argyle, who for his namesake and for his father's sake, as well as the qualifications and endowments of the boy, would more naturally, according to all probability, take a greater pleasure and delight in him, and consequently provide better for him,

and with a more lasting care, than any other person of quality that had a sudden liking to him, which might change, and took him as a stranger out of a bare curiosity. Mr. Campbell was by these reasons overruled in the disposal of his little dumb prophetic cousin, as he called him, and resolved that an offer should be made of him to the present illustrious Duke of Argyle's most noble father. But it so unfortunately happened, that the earl making very much a longer stay at London than was expected, Mr. Campbell, the uncle, sent our young Duncan Campbell, his nephew, handsomely accoutred, and with a handsome sum of money in his pocket, by sea, with Captain Meek of Kircaldie, to London, with letters of recommendation to the earl's favour, and just a few days before young Duncan arrived in London, the earl was set out on his journey to his seat in Scotland.

I had now left him for near three years, not having seen him since about a year after his mother's death; and then coming to London, I had by mere accident an appointment to meet some Scotch gentlemen at the Buffalo at Charing-cross. There happened at that time to be a great concourse of Scotch nobility there at an entertainment; and one of the ladies and gentlemen passing by and seeing one of my friends, desired him to come in, and told him both he and his companion should be very welcome to partake of the diversion. The lady told him they had got a lovely youth, a Scotch miracle, among them, that would give us exquisite delight, and write down to us all the occurrences of our future lives, and tell us our names upon our first appearance. The moment I heard of it, Duncan Campbell came into my head; but as it is a thing not rare to be met with in Scotland for second sighted persons to tell such things, and as the Earl of Argyle was in the north, I thought little Duncan had been under his protection and with him, and did not dream of meeting with him there; and accordingly told my friend, before I went in, that I believed I knew a lad in Scotland would exceed this in foresight, let him be as dexterous in his art as he would.

As soon as I entered the room, I was surprised to find myself encompassed and surrounded by a circle of the most beautiful females that ever my eyes beheld. In the centre of this angelic tribe was seated a heavenly youth, with the most winning comeliness of aspect that ever pleased the sight of

any beholder of either sex; his face was divinely fair, and tinged only with such a sprightly blush as a painter would use to colour the picture of health with, and the complexion was varnished over by a blooming like that of flourishing fruit, which had not yet felt the first nippings of an unkind and an uncivil air; with this beauty was joined such a smiling draught of all the features as is the result of pleasantry and good humour. His eyes were large, full of lustre, majestic, well set, and the soul shone so in them, as told the spectators plainly how great was the inward vivacity of his genius; the hair of his head was thick, and reclined far below his shoulders; it was of a fine silver colour, and hung down in ringlets like the curling tendrils of a copious vine. He was by the women entertained, according to the claim which so many perfections joining in a youth just ripening into manhood might lay to the benevolent dispositions of the tender sex. One was holding the basin of water, another washing a hand, a third with a towel drying his face, which another fair had greedily snatched the pleasure of washing before, while a fourth was disposing into order his silver hairs with an ivory comb, in a hand as white, and which a monarch might have been proud to have had so employed in adjusting the crown upon his head; a fifth was setting into order his cravat; a sixth stole a kiss, and blushed at the innocent pleasure, and mistook her own thoughts as if she kissed the angel and not the man; and they all rather seemed to adore than to love him, as if they had taken him not for a person that enjoyed the frequent gift of the second-sight, but as if he had been some little prophet peculiarly inspired; and while they all thus admired and wondered, they all consulted him as an oracle. The surprise of seeing a young man so happy amidst the general concurring favours of the fair, made me be for awhile lost in a kind of delightful amazement, and the consideration of what bliss he was possessed made me scarce believe my own eyes, when they told me it was Duncan Campbell, who I had left an unhappy orphan at Edinburgh. But so it was, though he was much altered in stature, being now shot up pretty fast in his growth since I had seen him, and having gained a kind of a fixed comportment, such as we may daily observe in those who are taking leave of their minority, and stepping into a stage of maturer life.

The first remarkable thing I knew him do in London, being

in this splendid company, where there were so many undoubted witnesses of quality too, that had ocular proof of his predictions at that public tavern: I choose to record it here in the first place according to its due order. It was in the year 1698.

Among this angelical class of beauties were Dr. W—lw—d's lady and daughter. Upon earth there was not sure a more beautiful creature than the daughter was; she was the leading light of all the sparkling tribe; and Otway's character suits her exactly; for she was among ten thousand eminently fair. One would imagine prosperous and lucky fortune was written upon her face, and that nothing unhappy could be read in so fair a book; and it was therefore the unanimous consent of all, that by way of good omen to the rest, his predictions should begin to be opened luckily that day, and that therefore he should first of all be consulted about her.

Accordingly, the mother, to be satisfied of his talent before she proceeded to any other questions, asked him in writing if he knew the young lady, her name, and who she was. After a little ruminating and pondering upon the matter, and taking an exact view of the beauty, he wrote down her name, told Mrs. W—lw—d she was her daughter, and that her father was a doctor. Convinced by his so readily telling the name and quality of persons he had never seen in his lifetime, that fame had not given a false character of his capacity, she proceeded in her questions as to her future fortune. He gazed afresh at her very eagerly for some time, and his countenance during that time of viewing her seemed to be ruffled with abundance of disturbance and perplexity. We all imagined that the youth was a little touched at the heart himself with what he saw, and that instead of telling hers, he had met in her bright eyes with his own destiny, the destiny of being for ever made a slave and a captive to so many powerful and almost irresistible charms.

At length, after having a long debate within himself, which we thought proceeded from the strugglings of love and passion, he fetching a great sigh, which still convinced us more, took the pen and wrote to Mrs. W—lw—d, that he begged to be excused, and that his pen might remain as dumb and silent as his tongue on that affair. By this answer we concluded, one and all, that our former conjectures were true,

and we joined in pressing him the more earnestly to deliver his real and sincere opinion concerning the accidents upon which the future fortunes of her life were to turn and depend. He showed many mighty reluctances in the doing it; and I have often since considered him in the same anguish as the late great Dr. Ratcliff, who was endeavouring by study to save a certain fair one, whom he loved with a vehemence of temper, and who was, as his reason told him, got far away beyond the reach of the art of physic to recover. At last he wrote in plain terms that his backwardness and unwillingness to tell it, arose from his wishes that her fortune would be better than his certain foreknowledge of it told him it would be, and begged that we would rest satisfied with that general answer, since it was in so particular a case, where he himself was a well-wisher in vain, to the lady about whom he was consulted. The young lady herself thinking that if she knew any disasters that were to befall her she might, by knowing the nature of them beforehand, and the time when they were likely to happen, be able, by timely prudence and forecast, to avert those evils, with many beseechings urged him to reveal the fatal secret. After many struggles to avoid it, and as many instances made to him both by mother and daughter for the discovery of his prescience in that point, he complied with very great difficulty; and blotting the paper with tears that trickled fast from his eyes, he gave her the lamentable scroll, containing the words that follow; viz., I wish it had not fallen to my lot to tell this lady, whom everybody that but once looks at her must admire, though they must not have leave to love, that she is not much longer to be possessor of that lovely face, which gains her such a number of adorers. The smallpox will too soon turn a ravisher, and rifle all those sweets and charms that might be able to vanquish a king and to subdue a conqueror of mighty battles. Her reign is doomed, alas! to be as short as it is now great and universal; I believe she has internal beauties of the mind, not the least inferior to those external excellences of the body; and she might, perhaps, by the power of her mind alone, be absolute queen of the affections of men, if the smallpox threatened not too surely to be her farther enemy, and, not contented to destroy the face, was not perversely bent to destroy the whole woman. But I want words to express my sorrow. I would not tell it if

you did not extort the baneful secret from my bosom. This fair creature, whose beauty would make one wish her immortal, will, by the cruel means of the smallpox, give us too sudden a proof of her mortality. But neither the mother nor herself ought too much to repine at this, seeing it appears to be the decree of Providence, which is always to be interpreted as meant for our good, and seeing it may be the means of translating her the sooner only to her kindred angels, whose beauty she so much resembles here on earth, and to be among the lowest class of whom, is better than being the greatest beauty of the world here below, and wearing an imperial crown. While I comfort you, I cannot help the force of nature, which makes me grieve myself; and I only give you, because you compel me to it, so particular and so exact an answer to so particular and so exacting a question.

The mother, who took the paper, was prudent enough to conceal from the daughter what he said; but nature would force its way, and bubbled from her eyes; and the daughter perceiving that, pressed hard to see it, and wept at the consideration that hard fate, though she knew not particularly what way, was to befall her. Never surely was anything so beautiful in tears, and I obtained of the mother to see the writing. At last, in general terms, to free her from a suspense of mind, it was told her that some trouble should happen to her that should diminish her beauty. She had courage enough to hear that misfortune with disdain, and crying, If that be all, I am armed, I don't place much pride in that which I know age must shortly after destroy, if trouble did not do it before; and she dried up her tears; and, if what Mr. Bruyere says, be true, viz., that the last thing a celebrated woman thinks of when she dies, is the loss of her beauty, she showed an admirable pattern of female philosophy, in bearing such a cruel prediction with such unspeakable magnanimity, as exceeded even the patience of stern stoicism, considering she was a woman, to whom beauty is more dear than life.

If any evil, that is impending over people's heads, could be evaded by foreknowledge, or eluded by art, she had the fairest opportunity of having this prediction annulled, which would have been more to the satisfaction of the predictor than knowing it verified, than ever any woman had. Her

mother was specifically told that the fatal distemper should be the smallpox; her father was, and is still, a very eminent physician; and distempers of that kind, especially, are much more easily prevented by care, than cured by art, and by art more easily set aside, when there is a timely warning given to a physician to prepare the body against the danger of the poison, than when the distemper has once caught hold of a body at unawares, when it is unpurged of any gross humours that may accompany it. But neither the foreknowledge and caution of the mother, nor the skill and wisdom of the great physician her father, were sufficient to ward off the approaching harm, that was written in the books of fate. Not many suns had finished their yearly courses, before she was forced to submit to the inevitable stroke of death, after the infectious and malicious malady had first ravished her beauty, rioted in all her sweets, and made an odious deformed spectacle of the charmer of mankind. The death of the daughter worked hard upon the mother's bowels, and dragged her speedily after her, with a broken heart to the grave.

This lady, whose fortune so great and so distinguished an assembly had chosen to hear as a happy forerunner and lucky omen of all their own, which were to be asked afterwards in their turns, proving so contrary to their expectations, already unfortunate in the prediction, and having been in tears about the matter, disheartened all the rest of the beauties from consulting him farther that day. The person who kept the tavern, by name, Mrs. Irwin, alleged that as some people were very fortunate, and others unfortunate upon the same day, so one lady might be before told a mishap one minute, and another lady all the prosperity in nature the very next minute following, and therefore that what the unfortunate lady had heard was not to be taken as ominous, or as what could malignantly influence the day, neither ought it to be the least hinderance to any who had the curiosity of being let into the secrets of time beforehand. However, whether the ladies were convinced or no; if she prevailed over their belief in that point, she could not prevail over their humour, which, though they might not believe the former prediction ominous to themselves, were naturally awed for fear of the like, peradventure, for a time, and so it was agreed, *nemine contradicente*, as a witty lady wrote it down, That no more

petitions should for that day be presented by any of that company to his dumb, yet oracular, majesty. Mrs. Irwin, however, would have her way; said she did not presume to such honour as to call herself of that company, and that therefore she might consult him without breaking through the votes of the assembly. Many endeavoured to dissuade her, but as she was passionately fond of knowing future events; and had a mighty itch to be very inquisitive with the oracle about what might happen, not only to herself, but her posterity; it was agreed that he should have the liberty of satisfying her curiosity, since she presumed her fortune was sure to be so good, and was so forward and eager for the knowledge of it. But, alas! such is too often the fantastical impulse of nature unluckily depraved, that it carries us often into wishes of knowing, what when known we would be glad to unknow again, and then our memory will not let us be untaught.

Mrs. Irwin was at that time in a pretty commodious way of business, everything in plenty round about her, and lived more like a person of distinction, that kept such a cellar of wine, open house, and a free table, than like one who kept a tavern. She brought in her pretty children, that were then almost babies, the youngest having not long been out of the nurse's arms, or trusted to the use of its own legs. These children she loved as a mother should love children; they were the delight of her eyes all day, and the dream of her imagination all night. All the passions of her soul were confined to them; she was never pleased but when they were so, and always angry if they were crossed; her whole pride was centered in them, and they were clothed and went attended more like the infants of a princess, than of a vintner's relict. The fortune of these was what she had near at heart, and of which she was so eager of being immediately apprised. Her impatience was proportionable to the love she had for them, and which made her wish to foreknow all the happiness that was like to attend them. She sat cheerfully down, presented one to him, and smiling, wrote the question in general terms, viz., is this boy to be happy or unhappy. A melancholy look once more spread itself all over the face of the predictor, when he read the too inquisitive words, and he seemed mightily to regret being asked a question, to which he was by his talent of foreseeing

compelled to give so unwelcome an answer. The colour of the poor woman flushed and vanished alternately, and very quick, and she looked not quite like the picture of despair, but a disconsolate woman, with little hopes on one hand, and great doubts and dismal fears on the other. She professed she read great evil in the troubles of his face, thanked him for his good nature, told him that they all knew that though he could foretell he could not alter the acts and decretals of fate, and therefore desired him to tell her the worst; for that the misfortunes, were they never so great, would be less dreadful to her than remaining in the state of fear and suspension. He at last wrote down to her that great and unexpected and even unavoidable accidents would involve the whole family in new calamities, that the son she asked him about would have the bitterest task of hardship to go through withal, while he lived, and that to finish all more unhappily, he would be basely and maliciously brought to an untimely end, by some mortal enemy or other, but that she should not trouble herself so much on that head, she would never see it, for it would happen some years after she was departed from the world. This melancholy account closed up the book of predictions for that day, and put a sad stop to all the projected mirth and curiosity. Now I must tell the reader how and when the event answered the prediction. And in a few words, it was thus; poor Mrs. Irwin, by strange accidents, decayed in the world, and dying poor, her sons were forced to be put out apprentices to small trades, and the son, whom the above-mentioned prediction concerned, was, for stealing one cheese from a man in the Haymarket, severely prosecuted at the Old Bailey, and on Wednesday, the 23rd of December, 1713, hanged at Tyburn, with several other criminals.

The two foregoing passages are of so tragical a nature, that it is time I should relieve the minds of my readers with some histories of ladies who consulted him with more success and advantage, to whom his predictions were very entertaining, when they so came to pass in their favour, the relation whereof will consequently be agreeable to all readers who have within them a mixture of happy curiosity and good nature.

Two ladies, who were the most remarkable beauties in London, and most courted, turned at the same time their

thoughts to matrimony; and being satiated, I may say wearied, with the pleasure of having continually after them a great number and variety of adorers, resolved each, about the same time, to make a choice of their several men, to whom they thought they could give most happiness, and from whom they might receive most. Their names, for they are both persons of distinction, shall be Christallina and Urbana. Christallina was a virgin, and Urbana a young widow. Christallina engrossed the eyes, the hearts, and the sighs of the whole court; and wherever she appeared, put any court lady out of her place, that had one before in the heart of any youth; and was the most celebrated toast among the *beau monde*. Urbana's beauty made as terrible havock in the city; all the citizens' daughters that had many admirers, and were in fair hopes of having husbands when they pleased themselves, as soon as Urbana had lost her old husband, found that they every day lost their lovers; and it was a general fear among the prettiest maids, that they should remain maids still, as long as Urbana remained a widow. She was the monopolizer of city affection, and made many girls, that had large stocks of suitors, bankrupts in the trade of courtship, and broke some of their hearts, when her charms broke off their amours. Well, but the day was near at hand when both the belles of the court and the city damsels were to be freed from the ravages which these two tyrants, triumphant in beauty and insolent in charms, made among the harvest of love. Each had seen her proper man, to whom the enjoyment of their person was to be dedicated for life. But it being an affair of so lasting importance, each had a mind to be let into the knowledge of the consequences of such a choice, as far as possible, before they stepped into the irrevocable state of matrimony. Both of them happened to take it into their heads, that the best way to be entirely satisfied in their curiosity, was to have recourse to the great predictor of future occurrences, Mr. Duncan Campbell, whose fame was at that time spread pretty largely about the town. Christallina and Urbana were not acquainted with each other, only by the report which fame had made of beauty. They came to Mr. Campbell's on the same day, and both with the same resolution of keeping themselves concealed and under masks, that none of the company of consulters, who happened to be there, might know who they were. It happened that on

that very day, just when they came, Mr. Campbell's rooms were more than ordinarily crowded with curious clients of the fair sex, so that he was obliged to desire these two ladies, who expressed so much precaution against, and fear of having their persons discovered, to be contented with only one room between them, and with much ado they complied with the request, and condescended to sit together *incog*. Distant compliments of gesture passed between them, the dress and comportment of each making them appear to be persons of figure and breeding, and after three or four modish courtesies, down they sat, without so much as once opening their lips, or intending so to do. The silence between them was very formal and profound for near half an hour, and nothing was to be heard but the snapping of fans, which they both did very tunably, and with great harmony, and played as it were in concert.

At last, one of the civil, well-bred mutes, happening to sneeze, the other very gracefully bowed, and before she was well aware, out popped the words, Bless you, madam. The fair sneezer returned the bow, with an—I thank you, madam. They found they did not know one another's voices, and they began to talk very merrily together, with pretty great confidence, and they taking a mutual liking from conversation, so much familiarity grew thereupon instantly between them, that they began not only to unmask, but to unbosom themselves to one another, and confess alternately all their secrets. Christallina owned who she was, and told Urbana the beau and courtier that had her heart. Urbana as frankly declared that she was a widow, that she would not become the lady's rival, that she had pitched upon a second husband, an alderman of the city. Just by that time they had had their chat out, and wished one another the pleasure of a successful prediction, it came to Christallina's turn to visit the dumb gentleman, and receive from his pen oracular answers to all the questions she had to propose. Well, he accordingly satisfied her in every point she asked him about; but while she was about this, one of Mr. Campbell's family going with Urbana to divert her a little, the widow rallied at the virgin as a fool, to imagine that she should ever make a conquest of the brightest spark about the court, and then let fly some random bolts of malice to wound her reputation for chastity. Now it became the widow's turn to go and

consult; and the same person of Mr. Campbell's family in the mean time entertained Christallina. The maid was not behindhand with the widow; she rallied against the widow, represented her as sometimes a coquette, sometimes a lady of pleasure, sometimes a jilt, and lifted up her hands in wonder and amazement that Urbana should imagine so rich a man as an alderman such a one, should fall to her lot. Thus Urbana swore and protested that Christallina could never arrive at the honour of being the wife to the courtly Secretarius, let Mr. Campbell flatter her as he would; and Christallina vowed that Campbell must be a downright wizard if he foretold that such a one as Urbana would get Alderman Stiffump as a husband, provided a thing so improbable should come to pass.

However, it seems, Duncan had told them their own names and the names of their suitors, and told them farther, how soon they were both to be married, and that too directly to their heart's content, as they said rejoicingly to themselves, and made their mutual gratulations.

They went away each satisfied that she should have her own lover, but Christallina laughed at Mr. Campbell for assigning the alderman to Urbana; and Urbana laughed at him for promising the courtier to the arms of Christallina.

This a pretty good figure of the tempers of two reigning toasts with regard to one another.

First, their curiosity made them, from resolving to be concealed, discover one another wilfully; from utter strangers grow as familiar as old friends in a moment, swear one another to secrecy, and exchange the sentiments of their hearts together; and, from being friends, become envious of each other's enjoying a similitude of happiness; the compliments made on either side face to face, were, upon the turning of the back, turned into reflections, detraction, and ridicule; each was a self-lover and admirer of her own beauty and merit, and a despiser of the other's.

However, Duncan Campbell, proved at last to be in the right; Urbana was wrong in her opinion of Christallina's want of power over Secretarius, and Christallina was as much out in her opinion that Urbana would miss in her aim of obtaining Stiffump; for they both proved in the right of what they thought with regard to their own dear single

persons, and were made happy according to their expectations, just at the time foretold by Mr. Campbell.

Christallina's ill wishes did not hinder Urbana from being mistress of Alderman Stiffump's person and stock, nor did Urbana's hinder Christallina from showing herself a shining bride at the Ring, in Secretarius's gilded chariot, drawn by six prancers of the proud Belgian kind, with her half dozen of liveries with favours in their hats, waiting her return at the gate of Hyde Park.

Both loved and both envied, but both allowed of Mr. Campbell's foreknowledge.

Having told you two very sorrowful passages, and one tolerably successful and entertaining; I shall now relate to you another of my own knowledge, that is mixed up with the grievous and the pleasant, and chequered, as it were, with the shade and the sunshine of fortune.

Though there are vicissitudes in every stage of life under the sun, and not one ever ran continually on with the same series of prosperity; yet those conditions which are the most liable to the signal alterations of fortune, are the conditions of merchants; for professed gamesters I reckon in a manner as men of no condition of life at all; but what comes under the statute of vagabonds.

It was, indeed, as the reader would guess, a worthy and a wealthy merchant, who was to run through these different circumstances of being. He came and visited our Mr. Campbell in the year 1707, he found him amidst a crowd of consulters; and being very eager and solicitous to know his own fortune just at that critical juncture of time, he begged of him, if possible, to adjourn his other clients to the day following, and sacrifice that one wholly to his use; which as it was probably more important than all the others together, so he wrote down that he would render the time spent about it more advantageous to Mr. Campbell; and, by way of previous encouragement, threw him down ten guineas as a retaining fee.

Mr. Campbell, who held money in very little esteem, and valued it so much too little, that he has often had my reprehensions on that head, paused a little, and after looking earnestly in the gentleman's face, and reading there, as I suppose, in that little space of time in general, according to the power of the second-sight, that what concerned him was

highly momentous, wrote him this answer ; That he would comply with his requests, adjourn his other clients to the day following, and set apart all the remnant of that, till night, for inspecting the future occurrences of which he had a mind to be made a master.

There is certainly a very keen appetite in curiosity ; it cannot stay for satisfaction, it is pressing for its necessary repast, and is without all patience : hunger and thirst are not appetites more vehement and more hard and difficult to be repressed than that of curiosity ; nothing but the present now is able to allay it. A more expressive picture of this I never beheld than in the faces of some, and the murmurs and complaints of others, in that little inquisitive company, when the unwelcome note was given about signifying an adjournment for only twenty-four hours.

The colour of a young woman there came and went a hundred times, if possible, in the space of two minutes ; she blushed like a red rose this moment, and in the switch of an eyelash she was all over as pale as a white one : the suitor, whose name her heart had gone pit-a-pat for the space of an hour to be informed of from the pen of a seer, was now deferred a whole day longer ; she was once or twice within an ace of swooning away, but he comforted her in particular, by telling her, though he said it only by way of jest, that the day following would be a more lucky day to consult about husbands than the present that she came on. The answer was a kind of cordial to her hopes, and brought her a little better to herself.

Two others, I remember, sisters and old maids, that it seems were misers, women ordinarily dressed and in blue aprons, and yet, by relation, worth no less than two thousand pounds each, were in a peck of troubles about his going and leaving them unsatisfied. They came upon an inquiry after goods that were stolen, and they complained that by next morning at that time, the thief might be got far enough off, and creep into so remote a corner, that he would put it beyond the power of the devil and the art of conjuration to find him out and bring him back again. The disturbance and anxiety that was to be seen in their countenances was just like that which is to be beheld in the face of a great losing gamester, when his all, his last great stake, lies upon

the table, and is just sweeping off by another winning hand into his own hat.

The next was a widow who bounced, because, as she pretended, he would not tell her what was best to do with her sons, and what profession it would be most happy for them to be put to; but in reality all the cause of the widow's fuming and fretting, was not that she wanted to provide for her sons, but for herself; she wanted a second husband, and was not half so solicitous about being put in a way of educating those children she had already, as of knowing when she should be in a likelihood of getting more. This was certainly in her thoughts, or else she would never have flounced about in her weed, from one end of the room to the other, and all the while of her passion, smile by fits upon the merchant, and leer upon a young pretty Irish fellow that was there. The young Irishman made use of a little eye-language; she grew appeased, went away in quite a good humour, scuttled too airily down stairs for a woman in her clothes, and the reason was certainly that she knew the matter before, which we took notice of presently after: the Irishman went precipitately after her down stairs without taking his leave.

But neither were the two misers for their gold, the virgin for a first husband, nor the widow for a second, half so eager as another married woman there was for the death of her spouse. She had put the question in so expecting a manner for a lucky answer, and with so much keen desire appearing plainly in her looks, that no big-bellied woman was ever more eager for devouring fruit; no young, hasty bridegroom, just married to a beauty, more impatient for night and enjoyment, than she was to know what she thought a more happy moment, the moment of her husband's last agonising gasp. As her expectation was the greatest, so was her disappointment, too, and consequently her disorder upon his going and leaving her unresolved. She was frantic, raging, and implacable; she was in such a fury at the delay of putting off her answer to the day following, that in her fury she acted as if she would have given herself an answer which of the two should die first, by choking herself upon the spot, with the indignation that swelled in her stomach and rose into her throat on that occasion. It may look like a romance to say

it, but indeed they were forced to cut her lace, and then she threw out of the room with great passion; but yet had so much of the enraged wife left, beyond the enraged woman, as to return instantly up stairs, and signify very ealmy, she would be certain to be there next day, and beseeched earnestly that she might not meet with a second disappointment.

All this hurry and bustle created a stay a little too tedious for the merchant, who began to be impatient himself, especially when word was brought up that a fresh company was come in; but Mr. Campbell was denied to them; and to put a stop to any more interruptions, the merchant and the dumb gentleman agreed to slip into a coach, drive to a tavern in the city, and settle matters of futurity over a bottle of French claret.

The first thing done at the tavern, was Mr. Campbell's saluting him upon a piece of paper by his name, and drinking his health. The next paper held a discourse of condolence for a disaster that was past long since; namely, a great and considerable loss that happened to his family, in the dreadful conflagration of the city of London. In the third little dialogue which they had together, he told the merchant that losses and advantages were general topics, which a person unskilled in that art might venture to assign to any man of his profession; it being next to impossible that persons who traffic should not sometimes gain, and sometimes lose. But, said Mr. Duncan Campbell, I will sketch out particuarly, and specify to you some future misfortunes with which you will unavoidably meet; it is in your stars, it is in destiny, that you should have some trials, and therefore when you are forewarned, take a prudent care to be forearmed with patience, and by longanimity, and meekly and resignedly enduring your lot, render it more easy, since impatience can't avert it, and will only render it more burdensome and heavy. He gave these words to the merchant; who pressed for his opinion that moment. By your leave, resuming the pen, said the dumb gentleman, in writing, we will have this bottle out first and tap a fresh one, that you may be warmed with courage enough to receive the first speulative onset of ill fortune, that I shall predict to you, with a good grace, and that may perhaps enable you to meet it when it comes to reduce itself into action, with a manful purpose and all becoming resolution. The merchant agreed to the proposal,

and put on an air of the careless and indifferent as well as he could, to signify that he had no need to raise up an artificial courage from the auxiliary forces of the grape. But nature, when hard pressed, will break through all disguises, and not only notwithstanding the air of pleasantry he gave himself, which appeared forced and constrained, but in spite of two or three sparkling and enlivening bumpers, a cloud of care would ever and anon gather and shoot heavily across his brow, though he laboured all he could to dispel it as quickly, and to keep fair weather in his countenance. Well, they had cracked the first bottle, and the second succeeded upon the table, and they called to blow a pipe together. This pipe Mr. Campbell found had a very ill effect; it is certainly a pensive kind of instrument, and fills a mind, anything so disposed, with disturbing thoughts, black fumes, and melancholy vapours, as certainly as it doth the mouth with smoke. It plainly took away even the little sparks of vivacity which the wine had given before; so he wrote for a truce of firing those sort of noxious guns any longer, and they laid down their arms by consent, and drank off the second bottle. A third immediately supplied its place, and at the first glass, the opening of the bottle, Mr. Campbell began to open to him his future case, in the following words: Sir, you have now some ventures at sea from such and such a place, to such a value. Don't be discomfited at the news which you certainly will have within three months, but it will be false at last, that they are by three different tempests made the prey of the great ocean, and enrich the bottom of the sea, the palace of Neptune. A worse storm than all these attends you at home, a wife who is, and will be more, the tempest of the house wherein she lives. The high and lofty winds of her vanity will blow down the pillars of your house and family; the high tide of her extravagance will roll on like a resistless torrent, and leave you at low water, and the ebb of all your fortunes. This is the highest and the most cutting disaster that is to befall you; your real shipwreck is not foreign but domestic; your bosom friend is to be your greatest foe, and even your powerful undoer for a time; mark what I say, and take courage, it shall be but for a time, provided you take courage; it will upon that condition be only a short and wholesome taste of adversity given to you, that you may relish returning prosperity with virtue,

and with a greater return of thanks to Him that dispenses it at pleasure to mankind. Remember, courage and resignation is what I advise you to ; use it, as becomes you, in your adversity, and believe that as I foretold that adversity, so I can foretell a prosperity will again be the consequence of those virtues ; and the more you feel the one ought not to cast you down, but raise your hopes the more, that he who foretold you that so exactly, could likewise foretell you the other. The merchant was by this put into a great suspense of mind, but somewhat easier by the second prediction being annexed so kindly to the first fatal one. They crowned the night with a flask of Burgundy, and then parting, each went to their respective homes.

The reader may perchance wonder how I, who make no mention of my being there, as in truth I was not at the tavern, should be able to relate this as of my own knowledge ; but if he pleases to have patience to the end of the story, he will have entire satisfaction in that point.

About half a year after, the merchant came again, told him that his prediction was too far verified, to his very dear cost, and that he was now utterly undone, and beyond any visible means of a future recovery, and doubting lest the other fortunate part of the prediction was only told him by way of encouragement, for groundless doubts and fears always attend a mind implunged in melancholy, besought him very earnestly to tell him candidly and sincerely if there was no real prospect of good, and rid him at once of the uneasiness of such a suspension of thought ; But pray too, said he, with all the vehemence of repeated expostulation, satisfy me if there are any farther hopes on this side the grave ?

To this Duncane Campbell made a short, but a very significant reply in writing. May the heavens preserve you from a threatening danger of life. Take care only of yourself, great and mighty care ; and if you outlive Friday next, you will yet be great and more fortunate than ever you was in all the height of your former most flourishing space of life. He coloured inordinately when Duncane Campbell said Friday, and conjured him to tell him as particularly as he could what he meant by Friday. He told him he could not particularise any farther, but that great danger threatened him that day ; and that without extraordinary precaution it would prove fatal to him, even to death. He shook his head, and went

away in a very sorrowful plight. Friday past, Saturday came, and on that very Saturday morning came likewise the joyful tidings, that what ventures of his were given over for lost at sea, were all come safe into the harbour. He came the moment he received those dispatches from his agent, to Mr. Duncan Campbell's apartment, embraced him tenderly, and saluted him with much gladness of heart, before a great roomful of ladies, where I happened to be present at that time; crying out in a loud voice, before he knew what he said, that Mr. Campbell had saved his life, that Friday was his birthday, and he had intended with a pistol to shoot himself that very day. The ladies thought him mad; and he, recovered from his ecstasy, said no more, but sat down, till Mr. Campbell dismissed all his clients; and then we three went to the tavern together, where he told me the whole little history or narrative, just as is above related.

The fame which Mr. Duncan Campbell got by the foregoing, and several other predictions of the like kind, was become very large and extensive, and had spread itself into the remotest corners of this metropolis. The squares rung with it, it was whispered from one house to another through the more magnificent streets, where persons of quality and distinction reside; it catched every house in the city, like the news of stock from Exchange-alley; it run noisily through the lanes and little thoroughfares where the poor inhabit; it was the chat of the tea-table, and the babble of the streets; and the whole town, from the top to the bottom, was full of it. Whenever any reputation rises to a degree like this, let it be for what art or accomplishment, or on what account soever it will, malice, envy, and detraction, are sure to be the immediate pursuers of it with full mouth, and to hunt it down if possible, with full cry. Even the great Nostradamus, though favoured by kings and queens, which always without any other reason creates enemies, was not more pursued by envy and detraction for his predictions in Paris, and throughout France, than our Duncan Campbell was in London, and even throughout England. Various, different, and many were the objections raised to blot his character and extenuate his fame, that when one was confuted another might not be wanting to supply its place, and so to maintain a course and series of backbiting, according to the known

maxim, Throw dirt, and if it does not stick, throw dirt continually, and some will stick.

Neither is there any wonder; for a man, that has got applauders of all sorts and conditions, must expect condemners and detractors of all sorts and conditions likewise. If a lady of high degree, for example, should say smiling, though really thinking absolutely what she says, for fear of being thought over-credulous: Well, I vow, some things Mr. Campbell does are surprising after all; they would be apt to incline one to a belief that he is a wonder of a man; for one would imagine the things he does impossible: why, then, a prude, with an assumed, supercilious air and a scornful *tihee*, would, in order to seem more wise than she was, reply; Laud, madam, it is more a wonder to me that you can be imposed upon so. I vow to Gad, madam, I would as soon consult an almanack maker, and pin my faith upon what he pricks down; or believe, like my creed, in the cross which I make upon the hand of a gipsy. Lard, madam, I assure your la'ship he knows no more than I do of you. I assure you so, and therefore believe me. He has it all by hearsay. If the lady that believed it, should reply, that if he had notice of every stranger by hearsay he must be a greater man than she suspected, and must keep more spies in pay than a prime minister; the prude's answer would be with a loud laugh, and giggling out these words; Lard, madam, I assure you nothing can be more easy; and so take it for granted. Because she was inclined to say so, and had the act of wisdom on her side, forsooth, that she appeared hard of belief, which some call hard to be put upon, and the other lady credulous, which some though believing upon good grounds are called, and so thought, foolish; the prude's answer would be thought sufficient and convincing.

Thus malice and folly, by dint of noise and impudence, and strong though empty assertions, often run down modesty and good sense. Among the common people it is the same, but only done in a different manner. For example, an ordinary person that had consulted, might say, as he walked along, there goes the dumb gentleman who writes down any name of a stranger at first sight. Steps up a blunt fellow, that takes stubbornness for sense, and says, That is a confounded lie; he is a cheat and an impostor, and you are one of his accomplices; he will tell me my name, I suppose, if

you tell it him first: he is no more dumb than I am; he can speak and hear as well as us; I have been with those that say they have heard him; I wish I and two or three more had him in our stable, and I warrant you with our cartwhips we would lick some words out of his chaps, as dumb as you call him. I tell you it is all a lie, and all a bite. If the other desires to be convinced for himself by his own experience, the rougher rogue, who perhaps has stronger sinews than the other, answers, If you lie any farther I will knock you down; and so he is the vulgar wit, and the mouth of the rabble-rout, and thus the detraction spreads below with very good success, as it does above in another kind.

As there are two comical adventures in his life, which directly suit and correspond with the foregoing reflections, this seems the most proper place to insert them in. The first consists of a kind of mob-way of usage he met with from a fellow who got to be an officer in the army, but by the following behaviour will be found unworthy of the name and the commission.

In the year 1701, a lady of good quality came and addressed herself to him much after the following manner. She told him she had choice of lovers, but preferred one above the rest; but desired to know his name, and if she made him her choice what would be the subsequent fate of such a matrimony. Mr. Duncan Campbell very readily gave her down in writing this plain and honest reply; That of all her suitors she was most inclined to a captain, a distinguished officer, and a great beau, naming his name, and one that had a great many outward, engaging charms, sufficient to blind the eyes of any lady that was not thoroughly acquainted with his manner of living. He therefore assured her, and thought himself bound, being conjured so to do, having received his fee, though there was danger in such plain and open predictions, that he was a villain and a rogue in his heart, a profligate gamester, and that if she took him to her bed, she would only embrace her own ruin. The lady's woman, who was present, being in fee with the captain, resolving to give intelligence, for fear the officer, her so good friend, should be disappointed in the siege, slyly shuffled the papers into her pocket, and made a present of them to the military spark. Fired with indignation at the contents, he vowed revenge; and in order to compass it, conspires with

his female spy about the means. In fine, for fear of losing the lady, though he quarrelled with Dunean Campbell, a method was to be found out how to secure her by the very act of revenge. At last it was resolved to discover to her, that he had found out what she had been told by Mr. Campbell, but the way how he had been informed was to remain a secret. He did do so, and ended his discovery with these words:—I desire, madam, that if I prove him an impostor, you would not believe a word he says. The lady agreed to so fair a proposal. Then the eaptain swore that he himself would never eat a piece of bread more till he had made Mr. Campbell eat his words; nay, he insisted upon it that he would bring him to his tongue, and make him own by word of mouth, that what he had written before was false and ealumnius. To which the lady answered again, that if he performed what he said, she would be eonvinced. This brave, military man, however, not relying upon his own single valour and prowess, to bring about so miraeulous a thing as the making a person that was dumb to speak, he took with him for this end three lusty assistants to eombine with him in the assassination. The ambuseade was settled to be at the Five Bells tavern, in Wyeh-street, in the Strand. After the ambush was settled with so much false courage, the business of deceoying Mr. Campbell into it was not praecticable any other way than by sending out false eolours. The lady's woman, who was by her own interest tied fast to the interests of the beau, was to play the trick of Delilah, and betray this deaf and dumb Samson, as he will appear to be a kind of one in the sequel of the story, into the hands of these Philistines. She smooths her face over with a eomplimenting lie from her mistress to Mr. Campbell, and acted her part of deceit so well, that he promised to follow her to the Five Bells with all haste; and so she scuttled back to prepare the eaptain, and to tell him how lucky she was in mischief; and how she drew him out by smiles into perdition. The short of the story is, when they got him in among them, they endeavoured to assassinate him; but they missed of their aim; yet it is eertain they left him in a very terrible and bloody eondition; and the eaptain went away in as bad a plight as the person was left in, whom he assaulted so cowardly with numbers, and to such disadvantage. I was sent for to him upon this disaster, and the story was delivered

to me thus, by one of the drawers of the tavern, when I inquired into it. They began to banter him, and speaking to him as if he heard, asked him if he knew his own fortune; they told him it was to be beaten to death. This was an odd way of addressing a deaf and dumb man. They added, they would make him speak before they had done. The boy seeing he made no reply, but only smiled, thought what passed between them was a jest with an old acquaintance, and withdrew about his business. The door being fastened, however, before they began the honourable attack, they vouchsafed to write down their intent in the words above mentioned, which they had uttered before to make sure that he should understand their meaning, and what this odd way of correction was for. All the while the maid who had brought him into it was peeping through a hole and watching the event, as appears afterwards. Mr. Campbell wrote them the following answer, viz., That he hoped for fair play, that he understood beargarden as well as they; but if a gentleman was amongst them he would expect gentlemanly usage. The rejoinder they made to this, consisted, it seems, not of words but of action. The officer in conjunction with another ruffian, one of the strongest of the three he had brought, commenced the assault. As good luck would have it, he warded off their first blows, it seems, with tolerable success, and a wine quart pot standing upon the table, Duncan took to his arms, and at two or three quick blows, well managed, and close laid in upon the assailants, felled them both to the ground. Here it was that the maid discovered her knowledge of it, and privy to the plot to the whole house; for she no sooner sees the famous leader, the valiant captain, lie sprawling on the floor with bleeding temples, but she shrieked out with all the voice she could exert, Murder, murder, murder! Alarmed at this outcry, the master and all the attendants of the tavern scampered up stairs, burst into the room, and found Duncan Campbell struggling with the other two, and the quart pot still fast clenched in his hand, which they were endeavouring to wrench from him. The drawers rescued him out of their hands, and inquired into the matter. The maid in a fright confessed the whole thing. The officer and his associate rubbed their eyes as recovering from a stunning sleep, reeled as they went to rise, paid the reckoning and slunk pitifully

away; or, as the rakes' term for it is, they brushed off, and for all their odds had the worst of the lay. I, who had some authority with Mr. Campbell, by reason of my years, and the strict acquaintance I had with his mother, when I came and found him in that pickle, and had the whole relation told to me by the people of the house, though I could not forbear pitying him within my own mind, took upon me to reprehend him, and told him that these hardships would by Providence be daily permitted to fall upon him, for he met with them twenty times, while he continued in that irregular way of living and spending his time, that might be so precious to himself and many others, in drunkenness and debauchery; and I think the lessons I wrote down to him upon that head, though a little severe just at that juncture, were, notwithstanding, well timed, and did, as I guessed they would, make a more solid impression in him than at any other. In all these scuffles, whether it is that being deaf and dumb an affront works deeper upon a man, and so renders him far more fierce or resolute, it must be said, that, though nature has been kind in making him very strong, robust, and active withal, yet he has bore some shocks, one would imagine, beyond the strength of a man, having sometimes got the better of five or six ruffians in rencounters of the like kind.

The next banter he met with was in a gentler way, from an unbelieving lady, and yet she came off with very ill success, and the banter turned all upon herself in the end.

A lady of distinction, whose name shall therefore be concealed in this place, came with two or three of her special friends, who took her for the most merry, innocent, spotless virgin upon earth, and whose modesty was never suspected in the least by her relations or servants that were nearest about her; after having rallied Mr. Campbell with several frivolous questions, doubting his capacity, and vexing and teasing him with gay impertinences beyond all patience, was by him told, that he did not take fees in his profession to be made a jest of like a common fortuneteller, but to do real good to those who consulted him, as far as he was able by his predictions; that he was treated with more respect by persons of a higher condition, though her own was very good, and so offered her guinea back again with a bow and a smile. She had a little more generosity of spirit than not to

be a little nettled at the proffer she had caused by so coarse an usage. She affected appearing grave a little, and told him she would be serious for the future, and asked him to set down her name, which she had neglected before, to ask other questions that were nothing to the purpose. He promised to write it down, but pausing a little longer than ordinary about it, she returned to her former way of uncivil merriment and ungallant raillery. She repeated to him in three or four little scraps of paper, one after another, as fast as she could write them, the same words, viz., That he could not tell her name, nor whether she was maid, wife, or widow; and laughed as if she would split her sides, triumphing to the rest of her companions over his ignorance and her own wit, as if she had posed him, and put him to an entire stand. But see what this overweening opinion of security ended in: the man of the second-sight was not to be so easily baffled. Vexed at being so disturbed, and coming out of his brown study, he reaches the paper and begins to write. Now it was the lady's turn to suffer, she had deserved hearty punishment, and it came into her hands with the note, to a degree of severity, as you will perceive by the contents of it just now. She read it, and swooning away, dropped from her chair. The whole room being in a bustle, I, that was in the outward chamber, ran in: while Mr. Campbell was sprinkling water in her face, a lady snatched up the note to read it, at which he seemed mightily displeased; I, therefore, who understood his signs, recovered it out of her hands by stratagem, and ran to burn it, which I did so quick that I was not discovered in the curiosity which I must own I satisfied myself in by reading it first; a curiosity raised too high by so particular an adventure, to be overcome in so little a time of thought, as I was to keep it in my hands, and so I came by the knowledge of it myself, without being informed by Mr. Campbell. This shows how a sudden curiosity, when there is not time given to think and correct it, may overcome a man as well as a woman; for I was never over-curious in my life, and though I was pleased with the oddness of the adventure, I often blushed to myself since for the unmanly weakness of not being able to step with a note from one room to another to the fireside, without peeping into the contents of it. The contents of it were these: Madam, since you provoke me, your name is——. You

are no widow, you are no wife, and yet you are no maid ; you have a child at nurse at such a place, by such a gentleman, and you were brought to bed in Leicestershire. The lady, convinced by this answer of his strange and mystical power, and pleased with his civility in endeavouring to conceal from others the secret, after so many repeated provocations, though she showed great disorder for that day, became one of his constant attenders some time after, and would not take any step in her affairs without his advice, which she often has said since, she found very much to her advantage. She was as serious in her dealings with him afterwards, and improved by being so, as she was gay and turbulent with him before, and smarted for it. In fine, she was a thorough convert, and a votary of his ; and the only jest she used afterwards to make, concerning him, was a civil witticism to his wife ; to whom she was wont, every now and then, smiling, to address herself after this manner : Your husband, madam, is a devil, but he is a very handsome and a very civil one.

Not long after this came another lady, with a like intent, to impose upon him ; and was resolved, as she owned, to have laughed him to scorn if she had succeeded in her attempt. She had very dexterously dressed herself in her woman's habit, and her woman in her own ; her footman squired the new-made lady in a very gentlemanly dress, hired for the purpose of a disguise, from Monmouth-street. The strange and unknown masqueraders entered Mr. Campbell's room with much art. The fellow was by nature of a clean make, and had a good look, and from following a genteel master when he was young, copied his gait a little, and had some appearance of a mien, and a tolerable good air about him. But this being the first time of his being so fine, and he a little vain in his temper, he over-acted his part ; he strutted too much ; he was as fond of his ruffles, his watch, his sword, his cane, and his snuff-box, as a boy of being newly put into breeches ; and viewed them all too often to be thought the possessor of any such things long. The affectation of the chambermaid was insufferable ; she had the toss of the head, the jut of the bum, the sidelong leer of the eye, the imperious look upon her lady, now degraded into her woman, that she was intolerable, and a person without the gift of the second-sight would have guessed her to have been a pragma-

tical upstart, though it is very probable that during that time she fancied herself really better than her mistress; the mistress acted her part of maid the best; for it is easier for genteel modesty to act a low part, than for affected vanity to act a high one. She kept her distance like a servant, but would, to disguise things the better, be every now and then pert, according to their way, and give occasion to be chid. But there is an air of gentility inborn and inbred to some people; and even when they aim to be awkward a certain grace will attend all their minutest actions and gestures, and command love, respect, and veneration. I must therefore own that there was not need of a man's being a conjuror to guess who ought to be the lady and who the maid; but to know who absolutely was the lady, and who was the maid did require that skill. For how many such real ladies have we that are made so from such upstarts, and how many genteel waiting-women of great descent that are born with a grace about them, and are bred to good manners. Mr. Campbell's art made him positive in the case; he took the patches from the face of the maid, and placed them on the mistress's; he pulled off her hood and scarf, and gave it the lady, and taking from the lady her riding-hood, gave it the maid in exchange; for ladies at that time of day were not entered into that fashion of cloaking themselves. Then he wrote down that he should go out, and ought to send his maid in to undress them quite, and give the mistress her own clothes and the maid hers, and with a smile wrote down both their names, and commended her contrivance; but after that it was remarked by the lady that he paid her less respect than she expected, and more to her footman, who was in gentleman's habit, whom he took by his side, and told a great many fine things; whereas he would tell the lady nothing farther. The lady nettled at this, wrote to him that she had vanity enough to believe that she might be distinguished from her maid in any dress, but that he had shown his want of skill in not knowing who that gentleman was. Mr. Campbell told her her mistake in sharp terms; and begging her pardon, assured her he knew several chambermaids as genteel and as well-born as her, and many mistresses more awkward and worse born than her maid; that he did not go therefore by the rule of guess and judging what ought to be, but by the rule of certainty and the knowledge of what

actually was. She, however, unsatisfied with that answer, perplexed him mightily to know who the man was. He answered, he would be a great man. The lady laughed scornfully, and said she wanted to know who he was, not what he would be. He answered again, he was her footman, but that she would have a worse. She grew warm, and desired to be informed, why, since he knew the fellow's condition, he respected her so little and him so much, and accused him of want of practising manners, if he had not want of knowledge. He answered, Madam, since you will be asking questions too far, this footman will advance himself to the degree of a gentleman, and have a woman of distinction to his wife; while you will degrade yourself by a marriage to be the wife of a footman; his ambition is laudable, your condescension, mean, therefore I give him the preference; I have given you fair warning and wholesome advice, you may avoid your lot by prudence; but his will certainly be what I tell you.

This coming afterwards to pass exactly as was predicted, and his disappointing so many that had a mind to impose upon him, has rendered him pretty free from such wily contrivances since, though now and then they have happened, but still to the mortification and disappointment of the contrivers. But as we have not pretended to say, with regard to these things, that he has his genius always at his elbow or his beck, to whisper in his ear the names of persons, and such little constant events as these; so, that we may not be deemed to give a fabulous account of his life and adventures, we think ourselves bound to give the reader an insight into the particular power and capacity which he has for bringing about these particular performances, especially that of writing down names of strangers at first sight, which I don't doubt will be done to the satisfaction of all persons who shall read the succeeding chapter, concerning the gift of the second-sight.

CHAPTER VII.

CONCERNING THE SECOND-SIGHT.

MR. MARTIN lately published a book, entitled, A Description of the Western Isles of Scotland, called by the ancient

geographers, Hebrides. It contains many curious particulars relating to the natural and civil history of those islands, with a map of them; and in his preface he tells us that, perhaps, it is peculiar to those isles that they have never been described, till now, by any man that was a native of the country, or had travelled them, as himself has done; and in the conclusion of the said preface he tells us, he has given here such an account of the second-sight as the nature of the thing will bear, which has always been reckoned sufficient among the unbiassed part of mankind; but for those that will not be satisfied, they ought to oblige us with a new scheme, by which we may judge of matters of fact. The chief particulars he has given us concerning the second-sight, are here set down by way of abstract or epitome, that they may not be too tedious to the reader.

1. In the second-sight, the vision makes such a lively impression on the seers, that they neither see nor think of anything else but the vision as long as it continues, and then they appear pensive or jovial, according to the object which was presented to them.

2. At the sight of a vision the eyelids of the person are erected, and the eyes continue staring till the object vanish, as has often been observed by the author and others present.

3. There is one in Skye, an acquaintance of whom observed, that when he sees a vision, the inner part of his eyelids turns so far upwards, that, after the object disappears, he must draw them down with his fingers, and sometimes employs others to draw them down, which he finds to be much the easier way.

4. The faculty of the second-sight does not lineally descend in a family, as some imagine; for he knows several parents that are endowed with it, but not their children, and so on the contrary; neither is it acquired by any previous compact; and after a strict inquiry, he could never learn from any among them that this faculty was communicable any way whatsoever.

NOTE. That this account is differing from the account that is given by Mr. Aubrey, a gentleman of the Royal Society; and I think Mr. Martin's reason here against the descent of this faculty from parents to children is not generally conclusive. For though he may know parents endowed with it and not children, and so vice versa, yet there may be

parents who are endowed with it, being qualified, as Mr. Aubrey has said, viz., both being second-sighted, or even one to an extraordinary degree, whose children may have it by descent. And as to this faculty being any otherwise communicable, since the accounts differ, I must leave it to a farther examination.

5. The seer knows neither the object, time, nor place of a vision before it appears; and the same object is often seen by different persons living at a considerable distance from one another. The true way of judging as to the time and circumstance of an object, is by observation; for several persons of judgment, without this faculty, are more capable to judge of the design of a vision, than a novice that is a seer. As an object appears in the day or night, it will come to pass sooner or later accordingly.

6. If an object be seen early in the morning, which is not frequent, it will be accomplished in a few hours afterwards; if at noon, it will commonly be accomplished that very day; if in the evening, perhaps that night; if after candles be lighted, it will be accomplished that night; it is later always in accomplishment by weeks, months, and sometimes years, according to the time of the night the vision is seen.

7. When a shroud is perceived about one, it is a sure prognostic of death; the time is judged according to the height of it about the person; for if it be not seen above the middle, death is not to be expected for the space of a year, and perhaps some months longer; and as it is frequently seen to ascend higher towards the head, death is concluded to be at hand in a few days, if not hours, as daily experience confirms. Examples of this kind were shown the author, when the persons, of whom the observations were made, enjoyed perfect health.

There was one instance lately of a prediction of this kind, by a seer that was a novice, concerning the death of one of the author's acquaintance; this was communicated to a few only, and with great confidence; the author being one of the number, did not in the least regard it, till the death of the person, about the time foretold, confirmed to him the certainty of the prediction. The foresaid novice is now a skilful seer, as appears from many late instances; he lives in the parish of St. Mary's, the most northern in Skye.

8. If a woman be seen standing at a man's left hand, it is

a presage that she will be his wife, whether they are married to others, or unmarried, at the time of the apparition. If two or three women are seen at once standing near a man's left hand, she that is next him will undoubtedly be his wife first, and so on, whether all three, or the man, be single or married at the time of the vision ; of which there are several late instances of the author's acquaintance. It is an ordinary thing for them to see a man, that is to come to the house shortly after ; and though he be not of the seer's acquaintance yet he not only tells his name, but gives such a lively description of his stature, complexion, habit, &c., that upon his arrival he answers the character given of him in all respects. If the person so appearing be one of the seer's acquaintance, he can tell by his countenance whether he comes in good or bad humour. The author has been seen thus, by seers of both sexes, at some hundreds of miles' distance ; some that saw him in this manner had never seen him personally, and it happened according to their visions, without any previous design of his to go to those places, his coming there being purely accidental ; and in the nineteenth page of his book he tells us, that Mr. Daniel Morrison, a minister, told him, that upon his landing in the island Rona, the natives received him very affectionately, and addressed themselves to him with this salutation ; God save you, Pilgrim ! you are heartily welcome here, for we have had repeated apparitions of your person amongst us ; viz., after the manner of the second-sight.

9. It is ordinary with them to see houses, gardens, and trees, in places void of all three, and this in process of time used to be accomplished ; of which he gives an instance in the island of Skye.

10. To see a spark of fire fall upon one's arm, or breast, is a forerunner of a dead child to be seen in the arms of those persons, of which there are several fresh instances.

To see a seat empty at the time of one's sitting in it, is a presage of that person's death quickly after.

When a novice, or one that has lately obtained the second-sight, sees a vision in the night-time without doors, and comes near a fire, he presently falls into a swoon.

Some find themselves, as it were, in a crowd of people, having a corpse, which they carry along with them ; and after such visions the seers come in sweating, and describe

the people that appeared ; if there are any of their acquaintance among them, they give an account of their names, and also of the bearers. But they know nothing concerning the corpse.

All those that have the second-sight, do not always see these visions at once, though they are together at the time ; but if one, who has this faculty, designedly touch his fellow seer, at the instant of a vision's appearing, then the second sees it as well as the first.

11. There is the way of foretelling death by a cry, that they call *taisk*, which some call a *wraith*, in the lowland. They hear a loud cry without doors, exactly resembling the voice of some particular person, whose death is foretold by it, of which he gives a late instance, which happened in the village Rigg, in Skye isle.

12. Things are also foretold by smelling, sometimes, as follows : Fish or flesh is frequently smelt in the fire, when at the same time neither of the two are in the house, or, in any probability, like to be had in it for some weeks or months. This smell several persons have who are endued with the second-sight, and it is always accomplished soon after.

13. Children, horses, and cows, have the second-sight, as well as men and women advanced in years.

That children see it, it is plain, from their crying aloud at the very instant that a corpse or any other vision appears to an ordinary seer ; of which he gives an instance in a child when himself was present.

That horses likewise see it is very plain, from their violent and sudden starting, when the rider, or seer in company with them, sees a vision of any kind by night or day. It is observable of a horse, that he will not go forward that way, till he be led about at some distance from the common road, and then he is in a sweat ; he gives an instance of this in a horse in the Isle of Skye.

That cows have the second-sight appears from this ; that if a woman milking a cow happens to see a vision by the second-sight, the cow runs away in a great fright at the same time, and will not be pacified for some time after.

In reference to this, Paracelsus, tom. ix. l. *de arte presagã*, writes thus ; “Horses also have their auguries, who perceive, by their sight and smell, wandering spirits, witches,

and spectres, and the like things; and dogs both see and hear the same."

Here in the next place the author answers objections that have lately been made against the reality of the second-sight.

First, it is objected, that these seers are visionary and melancholy people, who fancy they see things that do not appear to them or anybody else.

He answers, the people of these isles, and particularly the seers, are very temperate, and their diet is simple and moderate in quantity and quality; so that their brains are not, in all probability, disordered by undigested fumes of meat or drink. Both sexes are free from hysteric fits, convulsions, and several other distempers of that sort. There are no madmen among them, nor any instance of self-murder. It is observed among them, that a man drunk, never has a vision of the second-sight; and he that is a visionary would discover himself in other things as well as in that; nor are such as have the second-sight, judged to be visionaries by any of their friends or acquaintance.

Secondly, it is objected, that there are none among the learned able to oblige the world with a satisfactory account of these visions; therefore they are not to be believed.

He answers, if everything of which the learned are not able to give a satisfactory account, shall be condemned as false and impossible, we shall find many other things, generally believed, which must be rejected as such.

Thirdly, it is objected, that the seers are impostors, and the people who believe them are credulous, and easy to be imposed upon.

He answers, the seers are generally illiterate, and well-meaning people, and altogether void of design; nor could he ever learn that any of them made the least gain of it; neither is it reputable among them to have that faculty; beside, the people of the Isles are not so credulous as to believe an impossibility, before the thing foretold be accomplished; but when it actually comes to pass, afterwards it is not in their power to deny it, without offering violence to their senses and reason; beside, if the seers were deceivers, can it be reasonable to imagine that all the islanders, who have not the second-sight, should combine together and offer violence to their understandings and senses, to force themselves to believe a lie from age to age? There are several

persons among them, whose birth and education raise them above the suspicion of concurring with an imposture merely to gratify an illiterate and contemptible sort of persons. Nor can a reasonable man believe, that children, horses, and cows, could be engaged in a combination to persuade the world of the reality of a second-sight.

Every vision that is seen comes exactly to pass according to the rules of observation, though novices and heedless persons do not always judge by those rules; concerning which he gives instances.

There are visions seen by several persons, in whose days they are not accomplished; and this is one of the reasons why some things have been seen, that are said never to have come to pass; and there are also several visions seen, which are not understood till they are accomplished.

The second-sight is not a late discovery, seen by one or two in a corner, or a remote isle; but it is seen by many persons of both sexes, in several isles, separated about forty or fifty leagues from one another; the inhabitants of many of these isles never had the least converse by word or writing; and this faculty of seeing visions having continued, as we are informed by tradition, ever since the plantation of these isles, without being disproved by the nicest sceptic after the strictest inquiry, seems to be a clear proof of its reality.

It is observable, that it was much more common twenty or thirty years ago than at present; for one in ten does not see it now, that saw it then.

The second-sight is not confined to the Western Isles alone, the author having an account that it is in several parts of Holland, but particularly in Bommel, where a woman has it, for which she is courted by some, and dreaded by others. She sees a smoke about one's face, which is the forerunner of the death of a person so seen, and she actually foretold the deaths of several that lived there. She was living in that town a few winters ago.

The second-sight is likewise in the Isle of Man, as appears by this instance: Captain Leathes, the chief commander of Belfast, in his voyage 1690, lost thirteen men by a violent storm; and upon his landing in the Isle of Man, an ancient man, clerk to a parish there, told him immediately that he had lost thirteen men there; the captain inquired how he came to the knowledge of that; he answered that it was by

thirteen lights, which he had seen come into the churchyard ; as Mr. Sacheverel tells us in his late description of the Isle of Man. Note, that this is like the sight of the corpse-candles in Wales, which is also well attested.

Here the author adds many other instances concerning the second-sight, of which I shall set down only a few.

A man in Knockow, in the parish of St. Mary's, the northernmost part of Skye, being in perfect health, and sitting with his fellow-servants at night, was on a sudden taken ill, dropped from his seat backward, and then fell a vomiting ; at which the family was much concerned, he having never been subject to the like before ; but he came to himself soon after, and had no sort of pain about him. One of the family, who was accustomed to see the second-sight, told them that the man's illness proceeded from a very strange cause, which was thus : An ill-natured woman, whom he named, who lives in the next adjacent village of Bornskittag, came before him in a very angry and furious manner, her countenance full of passion, and her mouth full of reproaches, and threatened him with her head and hands, till he fell over, as you have seen him. This woman had a fancy for the man, but was like to be disappointed as to her marrying of him. This instance was told the author by the master of the family, and others who were present when it happened.

Sir Norman Macleod and some others, playing at tables, at a game called in Irish, Falmermore, wherein there are three of a side, and each of them throw the dice by turns, there happened to be one difficult point in the disposing of one of the tablemen ; this obliged the gamester to deliberate before he was to change his man, since upon the disposing of it, the winning or losing of the game depended ; at length the butler, who stood behind, advised the player where to place the man, with which he complied, and won the game. This being thought extraordinary, and Sir Norman hearing one whisper him in the ear, asked who advised him so skillfully ? He answered it was the butler ; but this seemed more strange, for it was generally thought he could not play at tables. Upon this Sir Norman asked him how long it was since he had learned to play ? and the fellow owned that he had never played in his life, but that he saw the spirit Brownie, a spirit usually seen in that country, reaching his arm over the player's head, and touching the part with

his finger where the tableman was to be placed. This was told the author by Sir Norman, and others who happened to be present at the time.

Daniel Bow, *alias* Black, an inhabitant of Bornskittag, who is one of the precisest seers in the Isles, foretold the death of a young woman in Minginis, within less than twenty-four hours before the time, and accordingly she died suddenly in the fields, though at the time of the prediction she was in perfect health; but the shroud appearing close about her head, was the ground of his confidence that her death was at hand.

The same person foretold the death of a child in his master's arms, by seeing a spark of fire fall on his left arm; and this was likewise accomplished soon after the prediction.

Some of the inhabitants of Harris, sailing round the Isle of Skye, with a design to go to the opposite mainland, were strangely surprised with an apparition of two men hanging down by the ropes that secured the mast, but could not conjecture what it meant; they pursued their voyage, but the wind turning contrary, they were forced into Broad-ford, in the Isle of Skye, where they found Sir Donald Macdonald keeping a sheriff's court, and two criminals receiving sentence of death there. The ropes and mast of that very boat were made use of to hang those criminals. This was told the author by several, who had this instance related to them by the boat's crew.

Several persons, living in a certain family, told the author that they had frequently seen two men standing at a gentleman's left hand, who was their master's daughter; they told the men's names, and being her equals, it was not doubted but she would be married to one of them; and perhaps to the other after the death of the first. Some time after a third man appeared, who seemed always to stand nearest to her of the three, but the seers did not know him, though they could describe him exactly; and within some months after, this man who was seen last, actually came to the house, and fully answered the description given of him by those who never saw him but in a vision; and he married the woman shortly after. They live in the Isle of Skye, and both themselves and others confirmed the truth of this instance when the author saw them.

Archibald Macdonald, of the parish of St. Mary's, in the Isle of Skye, being reputed famous in his skill of foretelling things to come, by the second-sight, happening to be in the village Knockow one night, and before supper, told the family that he had just then seen the strangest thing he ever saw in his life, viz., a man with an ugly long cap, always shaking his head; but that the strangest of all was a little kind of a harp which he had, with four strings only, and that it had two hart's horns fixed in the front of it. All that heard this odd vision fell a laughing at Archibald, telling him that he was dreaming, or had not his wits about him, since he pretended to see a thing which had no being, and was not so much as heard of in any part of the world. All this could not alter Archibald's opinion, who told them that they must excuse him if he laughed at them after the accomplishment of the vision. Archibald returned to his own house, and within three or four days after, a man with a cap, harp, &c., came to the house, and the harp, strings, horns, and cap, answered the description of them at first view, and he shook his head when he played; for he had two bells fixed to his cap. This harper was a poor man, who made himself a buffoon for his bread, and was never seen before in those parts, and at the time of the prediction he was in the Isle of Barray, which is about twenty leagues distant from that part of Skye. This relation is vouched by Mr. Daniel Martin, and all his family, and such as were then present; and they live in the village where this happened.

One Daniel Nicholson, minister of St. Mary's, in Skye, the parish in which Mr. Archibald Macdonald lived, told the author, that one Sunday, after sermon, at the chapel Uge, he took an occasion to inquire of Archibald, if he still retained that unhappy faculty of seeing the second-sight, and wished him to get rid of it, if possible; for, said he, it is no true character of a good man. Archibald was highly displeased, and answered, that he hoped he was no more unhappy than his neighbours, for seeing what they could not perceive. I had, said he, as serious thoughts as my neighbours in time of hearing a sermon to-day, and even then I saw a corpse laid on the ground, close to the pulpit; and I assure you it will be accomplished shortly, for it was in the day-time. There were none in the parish then sick, and few were buried

at that little chapel, nay, sometimes, not one in a year. Yet when Mr. Nicholson returned to preach in the said chapel, a fortnight or three weeks after, he found one buried in the very spot named by Archibald. This story is vouched by Mr. Nicholson the minister, and several of the parishioners still living.

Note, that it is counted by many an argument of somewhat evil attending upon this faculty of the second-sight, because there are instances given of some persons who have been freed of it upon using some Christian practices; but I shall hereafter show that this opinion cannot be entirely true.

Sir Norman Macleod, who has his residence in the Isle of Bernera, which lies between the isles of North Uist and Harris, went to the Isle of Skye about business, without appointing any time for his return; his servants, in his absence, being altogether in the large hall at night; one of them, who had the second-sight, told the rest they must remove, for there would be abundance of other company in the hall that night. One of his fellow-servants answered that there was very little likelihood of that, because of the darkness of the night, and the danger of coming through the rocks that lie round the isle; but within an hour after, one of Sir Norman's men came to the house, bidding them provide lights, &c., for his master had newly landed.

Sir Norman being told of this, called for the seer and examined him about it. He answered, that he had seen the spirit Brownie, in human shape, come several times and make a show of carrying an old woman, that sat by the fire, to the door, and at last seemed to carry her out by neck and heels, which made him laugh heartily, and gave occasion to the rest to conclude him mad, to laugh so much without any reason. This instance was told the author by Sir Norman himself.

Four men from the Isle of Skye and Harris went to Barbadoes, and stayed there some years; who though they had went to see the second-sight in their native country, never saw it in Barbadoes; but upon their return to England, the first night after their landing, they saw the second-sight; as the author was told by several of their acquaintance.

John Morrison, who lives in Bernera, of Harris, wears the plant called *fuga daemonum* sewed in the neck of his coat,

to prevent his seeing of visions, and says, he never saw any since he first carried that plant about him.

A spirit, by the country people called Brownie, was frequently seen in all the most considerable families in the isles, and north of Scotland, in the shape of a tall man, having very long brown hair; but within these twenty years past he has been seen but rarely.

There were spirits also that appeared in the shape of women, horses, swine, cats, and some like fiery bulls, which would follow men in the fields; but there have been but few instances of these for upwards of forty years past.

These spirits used also to form sounds in the air, resembling those of a harp, pipes, crowing of a cock, and of the grinding of hand-mills; and sometimes voices have been heard in the air at night, singing Irish songs; the words of which songs some of the author's acquaintances still retain; one of them resembled the voice of a woman who died some time before, and the song related to her state in the other world. All these accounts, the author says, he had from persons of as great integrity as any are in the world. So far Mr. Martin, whose account is so long, that I have given the reader only a short abridgment thereof; and shall therefore satisfy myself, without relating any further passages, by directing the reader to others also, learned men, who have written on the same subject. Laurentius Ananias printed a volume in Latin, at Venice, anno 1581, about the nature of demons; where, in the third book, he writes concerning the second-sight. The learned Camerarius does the like, and names a person of his own acquaintance whom he testifies to have had that gift. St. Austin himself testifies something (not very different from what we now call the gift of the second-sight) of one Curina, who lived in the country of Hippo, in Africa. Bonaysteau tells us something like it in his *Disc. de Excell. et Dig. Hominis*, concerning the spirit of Hermotimus. So do likewise Herodotus and Maximus Tyrius, about the spirit of Aristæus. Cardan does the same in his *De Rerum Variet.* 1. 8. c. 84, of his kinsman Baptista Cardan, a student at Pavia. Baptista Fulgosus tells us of what we call the second-sight, in other words, in his *Fact. et Dict. Memorab.* 1. i. c. 6. Among our own countrymen, the Lord Henry Howard, in the book he writ against supposed prophecies, in his seventeenth chapter, tells us a

wonderful story of this kind of sight; and sure that noble lord may be looked upon as an unexceptionable testimony, in a story he relates of his own knowledge, he having otherwise little faith in things of this kind. Mr. Cotton Mather, a minister of New England, in his relation of the wonders of the invisible world, inserted in his Ecclesiastical History of that country, printed in London, anno 1702, in folio, has given us several instances of this kind, as also of many other diabolical operations. Mr. Baxter's book concerning The Certainty of the World of Spirits, has the like proofs in it. Mr. Aubrey, Fellow of the Royal Society, has written largely concerning second-sighted persons; so has Mr. Beaumont, in his book of Genii and Familiar Spirits, who has collected almost all the other accounts together; and many others, whose very names it would be tedious to recite. However, as there are a few more passages, very curious in themselves, I will venture so far upon the reader's patience, as not only to recite the names of the authors, but the accounts themselves, in as succinct and brief a manner as it is possible for any one to do.

Mr. Th. May, in his History, lib. viii. writes, that an old man, like a hermit, second-sighted, took his leave of king James I. when he came into England; he took little notice of Prince Henry, but addressing himself to the Duke of York, since King Charles I., fell a weeping to think what misfortunes he should undergo; and that he should be one of the most miserable and most unhappy princes that ever was.

A Scotch nobleman sent for one of these second-sighted men out of the Highlands, to give his judgment of the then great George Villiers, Duke of Buckingham. As soon as ever he saw him; Pish, said he, he will come to nothing, I see a dagger in his breast; and he was stabbed in the breast by Captain Felton, as has been at large recounted in some of the foregoing pages.

Sir James Melvin hath several the like passages in his history.

A certain old man in South Wales, told a great man there of the fortune of his family, and that there should not be a third male generation. It has fallen out accordingly.

Sir William Dugdale with his own mouth informed several gentlemen, that Major-General Middleton (since lord) went into the Highlands of Scotland to endeavour to make a

party for King Charles I. An old gentleman, that was second-sighted, came and told him that his endeavour was good, but he would be unsuccessful; and, moreover, that they would put the king to death; and that several other attempts would be made, but all in vain; but that his son would come in, but not reign in a long time; but would at last be restored. This Lord Middleton had a great friendship with the laird Bocconi, and they made an agreement, that the first of them that died should appear to the other in extremity. The Lord Middleton was taken prisoner at Worcester fight, and was prisoner in the Tower of London, under three locks. Lying in his bed, pensive, Bocconi appeared to him; my Lord Middleton asked him if he were dead or alive? He said, Dead; and that he was a ghost; and told him that within three days he should escape, and he did so, in his wife's clothes; when he had done his message, he gave a frisk, and said—

Givanni, Givanni, 'tis very strange,
In the world to see so sudden a change;

and then gathered up and vanished. This account Sir William Dugdale had from the Bishop of Edinburgh; and this account he hath writ in a book of Miscellanies, which is now repositied, with other books of his, in the Museum at Oxford.

Thus the reader sees what great authorities may be produced to prove that wonderful and true predictions have been delivered by many persons gifted with the second-sight. The most learned men in almost all nations, who are not in all likelihood deceived themselves; the most celebrated and authentic historians, and some divines in England, who, it is not to be thought, have combined together and made it their business to obtrude upon us falsehoods; persons of all ranks, from the highest to the lowest, in Scotland, who, it would be even madness to think would join in a confederacy to impose tricks upon us, and to persuade us to the greatest of impostures as solemn truths delivered from their own mouths; all these, I say, have unanimously, and, as it were, with one voice, asserted, repeated, and confirmed to us, that there have been at all times, and in many different nations, and that still there are persons, who, possessed with the gift of a second sight, predict things that wonderfully come to pass;

and seem to merit very little less than the name of prophets for their miraculous discoveries. Now, if any man should come, and without giving the least manner of reason for it (for there is no reason to be given against such assertions), declare his disbelief of all these authentic, though strange accounts, can he with reason imagine that his incredulity shall pass for a token of wisdom? Shall his obstinacy confute the learned? Shall his want of faith be thought justly to give the lie to so many persons of the highest honour and quality, and of the most undoubted integrity? In fine, shall his infidelity, by a reverse kind of power to that which is attributed to the philosopher's stone, be able to change the nature of things, turn and transmute truth into falsehood, and make a downright plain matter of fact to be no more than a chimera, or an *ens rationis*? And shall a manifest experience be so easily exploded?

Taking it, therefore, for granted, that no modest man whatsoever, though never so hard of belief, which is certainly as great a weakness as that of too much credulity, will make bold openly to declare his disbelief of things so well attested; and taking it much more for granted still, that it is impossible for any man of common sense to have the front of declaring his disbelief of them in such a manner as to urge it for an argument and a reason why others should disbelieve them too; taking this, I say, as I think I very well may, for granted, I think there remains nothing farther for me to offer, before I conclude this chapter, except a few remarks as to the similitude there is between those actions which I have related above to have been performed by Mr. Campbell, and these actions which so many learned, ingenious, and noble authors, as I have just now quoted, have asserted to have been performed by persons whom they knew to be gifted with the second-sight.

As to what is said several pages above, concerning Duncan Campbell when a boy at Edinburgh, that he even told his little companions who would have success at their little matches when they played at marbles, and that he informed a great gamester there, whose name I have disguised under that of Count Cog, what times he should choose to play if he would win, as ludicrous as it may have appeared to be, and as much as it may have seemed to my readers to carry with it nothing better than the face of invention and the air of

fiction, yet if they will be at the pains of comparing that passage of Duncan Campbell's with the account given in this chapter from the mouth of Sir Norman Macleod, concerning a man, who, though he never played at tables in his life, instructed a skilful gamester, when he was at a stand, to place one of his men right, upon which the whole game depended, which the ignorant fellow, when asked how he came to do it, said he was directed to by the spirit Brownie; whoever, I say, will be at the pains of comparing these passages together, will find they bear a very near resemblance, and that the way we may most reasonably account for Duncan Campbell's prediction when he was a boy, must be, that he was at that time directed by his little genius or familiar spirit, which I described in the precedent pages, as this fellow was by the spirit Brownie, according to Sir Norman Macleod's assertion; which spirit Brownie, as Mr. Martin, a very good and credited writer, assures us, in his *History of the Western Islands*, dedicated to the late Prince George of Denmark, is a spirit usually seen all over that country.

If the reader recollects, he will remember likewise, that in the little discourse which I mentioned to have been held between me and this Duncan Campbell, when a boy, concerning his little genius, I there say, the boy signified to me that he smelt venison, and was sure that some one would come to his mother's house shortly after; accordingly I came thither that morning from the death of a deer, and ordered a part of it to be brought after me to her house. Now Mr. Martin's twelfth observation about the second-sight, in this chapter, clears it plainly up that this knowledge in the boy proceeded from the gift of second-sight. Not to give the reader too often the trouble of looking back in order to judge of the truth of what I say, I will here repeat that observation, which is as follows: Things are also foretold by smelling sometimes: for example, fish or flesh is frequently smelt in the fire, when, at the same time, neither of the two are in the house, or, in any probability, like to be had in it for some weeks or months. This smell several persons have, who are endued with the second-sight, and it is always accomplished soon after.

But I will here omit any farther remarks by way of accounting how he compassed his predictions when a boy, either by the intervention of his genius, or the gift of a

second-sight ; and examine how nearly those things, which I have related to have been done by him in his more advanced years, when he took up the profession of a predictor, in London, correspond with the accounts given us in this chapter about a second-sight, and how near a resemblance the things done by him bear to those things that are so well attested to have been performed by others, through the efficacious power of this wonderful faculty.

First, then, if we have a mind to make a tolerable guess which way Mr. Campbell came acquainted that the death of the beautiful young lady, Miss W—lw—d was so near at hand, and that, though she was so universally admired she would die unmarried, the accounts given of other second-sighted persons in the like cases, will put us in the most probable way of guessing right. This is explained by the seventh observation in this chapter, where it is said from Mr. Martin, that when a shroud is perceived about one, it is a sure prognostic of death ; the time is judged according to the height of it, about the person ; for if it be not seen above the middle, death is not to be expected for the space of a year or longer, but as it comes nearer to the head it is expected sooner ; if to the very head, it is concluded to be at hand within a few days, if not hours. Of this we have an example, of which Mr. Martin was an eye-witness, concerning the death of his own acquaintance ; but he did not in the least regard it, till the death of the person, about the time foretold, confirmed to him the certainty of the prediction.

Secondly, as to the ignominious death that Irwin came to, and which he predicted to his mother so long before, when she was in flourishing circumstances, and when there was no appearance that any of her children should be brought to a beggarly condition, and learn among base gangs of company to thieve, and be carried to the gallows ; the story told in this chapter of some of the inhabitants of Harris, sailing round the Isle of Skye, and seeing the apparition of two men hanging by the ropes on the mast of their vessel, and when they came to the opposite mainland, finding two criminals just sentenced to death by Sir Donald Macdonald, and seeing their own very mast and ropes made choice of for their execution, clears up the manner how Mr. Campbell might predict this of Irwin likewise, by the force of the second-sight.

Thirdly, as to Mr. Campbell's telling Christallina the belle and chief toast of the court, and Urbana the reigning beauty of the city, that they should shortly be married, and who were to be their husbands, it is a thing he has done almost every day in his life to one woman or other, that comes to consult him about the man she is to be married to; the manner he probably takes in doing this may be likewise explained by the foregoing story in this chapter about the servants, who said they saw three men standing by the left hand of their master's daughter; and that he that was nearest would marry her first, whom they plainly and exactly described, though they had never seen him but in their vision, as appeared afterwards. For within some months after, the very man described did come to the house, and did marry her. Vide the eighth observation of the second-sight.

Fourthly, as to the predictions delivered by Mr. Campbell to the merchant, which are set down at length in the foregoing chapter, I know no better way at guessing the manner how the second-sight operated in him at that time, than by comparing them to these two instances, which I briefly repeat because they are set down at length before, in this chapter. And first it may be asked, how did the second-sight operate in Mr. Campbell, when it gave him to know that the merchant's ships, which repeated intelligences had in appearance confirmed to be lost, were at that time safe, and would return securely home into the harbour designed? The best way of accounting for it, that I know, is by the story that Sir Norman Macleod is above affirmed to have told with his own mouth, concerning a servant of his, who rightly foretold his returning home and landing on the Isle of Bernera one night, where his residence is, when there was very little or no likelihood of it, because of the darkness of the night, and the danger of coming through the rocks that lie round the isle. When Sir Norman examined him about it, he answered that he knew it by a vision of the spirit Brownie; and hence it may be the most probably conjectured that Mr. Campbell's knowledge of the merchant's ships being safe came from a vision of his particular genius, or familiar spirit, which we spoke of before. What I have already instanced in, is, I think, sufficient with regard to the wonderful things which Mr. Campbell has performed, either by the intervention of a genius, or the power of a second-sight. But as he

has frequently done a great many amazing performances which seem to be of such a nature that they can't be well and clearly explained to have been done either by the intervention of his familiar spirit and genius, or by the power of the second-sighted faculty, we must have recourse to the third means by which only such predictions and practises can be compassed, before we expound these new mysteries, which appear like incredible riddles, and enigmas at the first; and this third means which we must have recourse to for expounding these strange acts of his, is a due consideration of the force and power of natural magic, which, together with a narrative of the acts, which he seems magically to bring about, will be the subject of the following chapter.

CHAPTER VIII.

BUT before we proceed to our disquisitions concerning the power and efficacy of natural magic, and examine what mysterious operations may be brought about and compassed by magical practises, and before we take a farther survey of what Mr. Campbell has performed in this kind, that relates to his profession and the public part of his life, which concerns other people as well as himself; I shall here relate some singular adventures that he passed through in his private life, and which regard only his own person. In order to this, I must return back to the year 1702, about which time some unaccountable turns of fortune attended him in his own private capacity, which must be very surprising and entertaining to my readers, when they find a man, whose foresight was always so great a help and assistance to others, who consulted him in their own future affairs, helpless, as it has been an observation concerning all such men in the account of the second-sight, and blind in his own future affairs, tossed up and down by inevitable and spiteful accidents of fortune, and made the may-game of chance and hazard, as if that wayward and inconstant goddess, was resolved to punish him, when she caught him on the blind side, for having such a quick insight and penetrating faculty in other people's matters, and scrutinizing too narrowly into her mysteries, and so sometimes preventing those fatal intentions of hers, into which she would fain lead many mortals hood-

winked, and before they knew where they were. In this light, these mighty and famous seers seem to be born for the benefit and felicity of others, but at the same time to be born to unhappiness themselves. And certainly, inasmuch as we consider them as useful and beneficial often, but always satisfactory to persons who are curious in their enquiries about their fortunes, it will be natural to those of us who have the least share of generosity in our minds, to yield our pity and compassion to them, when they are remarkably unfortunate themselves; especially when that calamity seems more particularly to light upon them for their ability, and endeavour to consult the good fortune of other folks.

About the above-mentioned year, 1702, Duncan Campbell grew a little tired of his profession; such a multitude of followers troubled him, several of whom were wild youths, and came to banter him, and many more too inquisitive females to tease him with endless impertinences, and who, the more he told them, had still the more to ask, and whose curiosity was never to be satisfied: and besides this, he was so much envied, and had so many malicious artifices daily practised against him, that he resolved to leave off his profession. He had, I know, followed it pretty closely from the time I first saw him in London, which was, I think, in the beginning of the year 1698, till the year 1702, with very good success; and in those few years he had got together a pretty round sum of money. Our young seer was now at man's estate, and had learned the notion that he was to be his own governor, so far as to be his own counsellor too in what road of life he was to take, and this consideration no doubt worked with a deeper impression on his mind, than it usually does on others that are in the same blossom and pride of manhood, because it might appear more natural for him to believe that he had a sufficient ability to be his own proper adviser, who had given so many others, and some more aged than himself, counsel, with very good success. Now every experienced person knows, that when manhood is yet green, it is still in the same dangerous condition as a young plant, which is liable to be warped by a thousand cross fortuitous accidents, if good measures be not taken to support it against all the contingent shocks it may meet with from the weather or otherwise. Now, it was his misfortune to be made averse to business, which he loved before, by

having too much of it, and to be so soured by meeting with numerous perplexities and malicious rubs laid in his way by invidious people, (who are the useless and injurious busybodies that always repine at the good of others, and rejoice to do harm to the diligent and assiduous, though they reap no profit by it themselves), that he was disgusted and deterred entirely from the prosecution of a profession by which he got not only a competent but a copious and plentiful subsistence. Nay, indeed, this was another mischief arising to him from his having so much business, that he had got money enough to leave it off, when the perplexities of it had made him willing to do so, and to live very comfortably and handsomely, like a gentleman, without it, for a time; and we know the youngest men are not wont to look the farthest before them, in matters that concern their own welfare. Now, inasmuch as he had thus taken a disgust to business and application, and was surfeited, as I may say, with the perplexities of it, it must be as natural for him, we know, to search for repose in the contrary extreme, viz., recreation and idleness, as it is for a man to seek rest after toil, to sleep after a day's labour, or to sit down after a long and tiresome walk. But there are two very distinct sorts of idleness, and two very different kinds of recreation; there is a shameful idleness which is no better than downright sloth; and there is a splendid kind of indolence, where a man having taken an aversion to the wearisomeness of a business which properly belongs to him, neglects not however to employ his thoughts, when they are vacant from what they ought more chiefly to be about, in other matters not entirely unprofitable in life, the exercise of which he finds he can follow with more abundant ease and satisfaction. There are some sorts of recreations, too, that are mean, sordid, and base; others that are very innocent, though very diverting, and that will give one the very next most valuable qualifications of a gentleman, after those which are obtained by a more serious application of the mind. The idea which I have already given my readers of our Duncan Campbell, will easily make them judge, before I tell them, which way, in these two ways, his genius would naturally lead him; and that when he grew an idle man, he would rather indulge himself with applying his mind to the shining trifles of life, than be wholly slothful and inactive; and that when he diverted himself he would

not do it after a sordid, base manner, as having a better taste and a relish for good company; but that his recreations would still be the recreations of a gentleman. And just, accordingly, as my readers would naturally judge beforehand in his case, so it really happened. The moment he shook off business, and dismissed the thoughts of it, his genius led him to a very gallant way of life; in his lodgings, in his entertainments, in paying and receiving visits, in coffee-houses, in taverns, in fencing-schools, in balls, and other public assemblies, in all ways, in fine, both at home and abroad, Duncan Campbell was a well-comported and civil fine gentleman; he was a man of pleasure, and nothing of the man of business appeared about him. But a gentleman's life, without a gentleman's estate, however shining and pleasant it may be for a time, will certainly end in sorrow, if not in infamy; and comparing life, as moralists do, to a day, one may safely pronounce this truth to all the splendid idlers I have mentioned, that if they have sunshiny weather till noon, yet the afternoon of their life will be very stormy, rainy and uncomfortable, and perhaps just at the end of their journey, to carry on the metaphor throughout, close in the darkest kind of night. Of this, as I was a man of years and more experienced in the world than he, I took upon me to forewarn Mr. Campbell, as soon as I perceived the first dangerous fit of this elegant idleness had seized him. But when will young men, by so much the more headstrong as they have less of the beard, be guided and brought to learn! and when shall we see that happy age, in which the grey heads of old men shall be clapped upon the shoulders of youth! I told him, that in this one thing he ought to consult me, and acknowledge me to be a true prophet, if I told him the end of the seeming merry steps in life he was now taking, would infallibly bring him to a labyrinth of difficulties, out of which if he extricated himself at all, he would at least find it a laborious piece of work. His taste had been already vitiated with the sweets which lay at the top of the bitter draught of fortune, and my honest rugged counsel came too late to prevail, when his fancy had decoyed and debauched his judgment, and carried it over into another interest. I remember I writ down to him the moral story, where vicious Pleasure and Virtue are pictured by the philosopher to appear before Hercules, to court him into two several paths. I told him

more particularly, since he had not an estate to go through with the gentlemanly life, as he called it, that, if he followed the alluring pleasures which endeavoured to tempt Hereules, he would involve himself at last in a whole heap of miseries, out of which it would be more than an Hereulean labour for him to disentangle himself again. If he had been a man that could have ever heard with either, I would have told the reader in a very familiar idiom, that he turned the deaf ear to me; for he did not mind one syllable or tittle of the prescriptions I set down for him, no more than if he had never read them; but, varying the phrase a little, I may say at least, when he should have looked upon my counsel with all the eyes he had, he turned the blind side upon it. I was resolved to make use of the revenge natural to a man of years, and therefore applied that reproachful proverb to him, which we ancients delight much in making use of to youths that follow their own false and hot imaginations, and will not heed the cooler dictates of age, experience, and wisdom. Accordingly, I wrote down to him these words, and left him in a seeming passion: I am very well assured, young man, you think me that am old, to be a fool; but I that am old, absolutely know you, who are a young fellow, to be a downright fool, and so I leave you to follow your own ways, till sad and woful experience teaches you to know it your own self, and makes you come to me to own it of your own accord. As I was going away, after this tart admonition and severe reprimand, I had a mind to observe his countenance, and I saw him smile, which I rightly construed to be done in contempt of the advice of age, and in the gaiety and fulness of conceit, which youth entertains of its own fond opinions and hair-brained rash resolves. He was got into the company of a very pretty set of gentlemen, whose fortunes were far superior to his; but he followed the same genteel exercises, as fencing, &c., and made one at all their public entertainments; and so being at an equal expense with those who could well afford to spend what they did out of their estates, he went on very pleasantly for a time, still spending and never getting, without ever considering that it must, by inevitable consequence, fall to his lot at last to be entirely reduced to a state of indigence and want. And what commonly heightens the misfortune of such men, and so of all gentlemen's younger brothers, who live upon the ready money that is given them

for their portions, is, that the prosperity they live in for a time gains them credit enough just to bring them in debt, and render them more miserable than those very wretches who never had either any money or credit at all. They run themselves into debt out of shame, and to put off the evil day of appearing ruined men as long as they can, and then, when their tempers are soured by adversity, they grow tired of their own lives; and then, in a quarrel, they or some other gentleman, may be, is run through, or else being hunted by bailiffs, they exercise their swords upon those pursuers. Thus, where gentlemen will not consider their circumstances, their very prosperity is a cause of, and aggravates their misery; their very pride, which was a decent pride at first, in keeping up and maintaining their credit, subjects them too often to the lowest and the meanest acts, and their courage, which was of a laudable kind, turns into a brutish and savage rage; and all the fine, esteemed, flourishing, and happy gentleman ends, and is lost in the contemned, poor and miserable desperado, whose portion at last is confinement and a gaol, and sometimes even worse, and what I shall not so much as name here. Into many of these calamities Mr. Campbell had brought himself before it was long, by his heedlessness, and running, according to the wild dictates of youth, counter to all sound and wholesome advice. He had, it seems, run himself into debt, and one day as he was at a coffee-house, the sign of the Three Crowns, in Great Queen-street, in rushed four bailiffs upon him, who being directed by the creditor's wife, had watched him into that house, and told him they had a warrant against him, and upon his not answering, they being unacquainted with his being deaf and dumb, offered to seize his sword. He startled at their offering of violence, and taking them for ruffians, which he had often met with, repelled the assaulters, and drawing his sword, as one man, more bold than the rest, closed in with him, he shortened his blade, and in the fall pinned the fellow through the shoulder, and himself through the leg, to the floor. After that he stood at bay with all the four officers, when the most mischievous assailant of them all, the creditor's wife, ventured to step into the fray, and very barbarously took hold of that nameless part of the man, for which, as she was a married woman, nature methinks should have taught her to have a greater tenderness, and almost squeezed and crushed

those vitals to death. But at last he got free from them all, and was going away as fast as he could, not knowing what consequences might ensue. But the woman who aimed herself at committing murder, in the most savage and inhuman manner, ran out after him, crying out, Murder! murder! as loud as she could, and alarmed the whole street. The bailiffs following the woman, and being bloody from head to foot, by means of the wound he received, gave credit to the outcry. The late Earl Rivers's footmen happening to be at the door, ran immediately to stop the supposed murderer, and they indeed did take him at last, but perceived their mistake, and discovered that instead of being assistants in taking a man whom they thought to be a murderer endeavouring to make his escape from the hands of justice, they had only been tricked in by that false cry to be adjutants to a bailiff in retaking a gentleman, who, by so gallant a defence, had rescued himself from the dangers of a prison; and when they had discovered this their mistake they were mighty sorry for what they had done. The most active and busy among the earl's footmen was a Dutchman, and the earl happening to be in a room next the street, and hearing the outcry of murder, stepped to the window, and seeing his own servants in the midst of the bustle, examined the Dutchman how the matter was, and, being told it, he chid the man for being concerned in stopping a gentleman that was getting free from such troublesome companions. But the Dutchman excused himself, like a Dutchman, by making a very merry blunder for a reply; *Sacramente*, said he, to his lord, if I had thought they were bailiffs, I would have fought for the poor dumb gentlemen, but then why had he not told me they were bailiffs, my lord?

In short, Duncan Campbell was carried off as their prisoner; but the bailiff that was wounded was led back to the coffee-house, where he pretended the wound was mortal, and that he despaired of living an hour. The proverb, however, was of the fellow's side, and he recovered sooner than other people expected he could. As soon as all danger was over, an action for damages and smart money, as their term is, was brought against Mr. Campbell; the damages were exaggerated and the demand was so extravagant, that Duncan Campbell was neither able, just at that time, nor willing, had he been able, to pay so much, as he thought, in

his own wrong, and having no bail, and being ashamed to make his case known to his better sort of friends, who were both able and willing to help him at a dead lift, he was hurried away to gaol by the bailiffs, who showed such a malignant and insolent pleasure, as commonly attends powerful revenge, when they put him into the Marshalsea. There he lay in confinement six weeks, till at last four or five of his chief friends came by mere chance to hear of it; immediately they consulted about his deliverance, and unanimously resolved to contribute for his enlargement, and they accordingly went across the water together, and procured it out of hand.

Two of his benefactors were officers, and were just then going over to Flanders. Duncan Campbell, to whom they communicated their design, was resolved to try his fortune in a military way, out of a roving kind of humour, raised in him partly by his having taken a sort of aversion to his own profession in town, and partly by his finding that he could not live, without following a profession, as he had done, any longer. He, over a bottle, frankly imparted his mind to them at large; he signified to them that he hoped, since they had lately done him so great a favour in freeing him from one captivity, they would not think him too urgent if he pressed for one favour farther, upon natures so generous as theirs, by whom he took as great a pleasure in being obliged, as he could receive in being capable of obliging others. He wrote to them that the favour he meant was to redeem him from another captivity, almost as irksome to him as that out of which they had lately ransomed him. This captivity, continued he, is being either forced to follow my old profession, which I have taken an entire disgust to, for a maintenance, or being forced to live in a narrower way than suits with my genius, and the better taste I have of higher life. Such a state, gentlemen, you know, is more unpalatable than half-pay; it is like either being forced to go upon the forlorn hope, or else like a man's being an entirely cashiered and broken officer, that had no younger brother's fortune, and no other support but his commission. Thus, though you have set my body at liberty, my soul is still under an imprisonment, and will be till I leave England, and can find means of visiting Flanders, which I can do no otherwise than by the advantage of having you for my convoy. I have a

mighty longing to experience some part of a military life, and I fancy, if you will grant me your interest, and introduce me to the valiant young Lord Lorne, and be spokesmen for a dumb man, I shall meet with a favourable reception; and as for you, gentlemen, after having named that great patron and pattern of courage and conduct in the field, I can't doubt but the very name I bear, if you had not known me, would have made you take me for a person of a military genius, and that I should do nothing but what would become a British soldier, and a gentleman; nothing, in fine, that should make you repent the recommendation.

These generous and gallant friends of his, it seems, complied with his request, and promised they would make application for him to the Lord Lorne, and Duncan Campbell had nothing to do but to get his bag and baggage ready, and provide himself with a pass. His baggage was not very long a getting together, and he had it in tolerable good order, and as for his pass, a brother of the Lord Forbes was so kind as to procure him one upon the first application Duncan made to him.

Accordingly, in a few days afterwards, they went on board, and having a speedy and an easy passage, arrived soon at Rotterdam. Duncan met with some of his English acquaintance in that town, and his mind being pretty much bent upon rambling, and seeing all the curiosities, customs, and humours he could, in all the foreign places he was to pass through, he went, out of a frolic, with some gentlemen, next day, in a boat to an adjacent village, to make merry over a homely Dutch entertainment, the intended repast being to consist of what the boors there count a great delicacy, brown bread and white beer. He walked out of sight from his company, and they lost one another; and strolling about by himself at an unseasonable hour, as they call it there after the bell has tolled, Duncan Campbell, who neither knew their laws, nor if he had, was capable of being guided by the notice which their laws ordain, was taken into custody in the village, for that night, and carried away the next day to Williamstadt, where he was taken for a spy, and put into a close imprisonment for three or four days.

But some Scotch gentlemen, who had been in company with Mr. Campbell at Mr. Cloysterman's, a painter in Covent-garden, made their application to the magistrate and

got him released; he knew his friends the officers, that carried him over, were gone forward to the camp, and that there was no hope of finding them at Rotterdam, if he should go thither, and so he resolved, since he had had so many days punishment in Williamstadt, to have three or four days pleasure there too, by way of amends, before he would set out on his journey after his friends. But on the third night he got very much in drink; and as he went very boisterously and disorderly along, a sentry challenged him; and the want of the sense of hearing had like to have occasioned the loss of his life. The sentry fired at him and narrowly missed him; he was taken prisoner, not without some resistance, which was so far innocent, as that he knew not any reason why he should be seized; but very troublesome and unwarrantable in so orderly a town; so the governor's secretary, after the matter was examined into, judging it better for the unhappy gentleman's future safety, advised him to return home to his own country, and accordingly bespoke him a place in a Dutch ship called Yowfrow Catherine, for his passage to England.

Duncan Campbell had taken up this humour of rambling, first, of his own accord, and the troubles which he had run himself into by it, we may reasonably suppose had pretty well cured him of that extravagant itch; and there is little doubt to be made but that he rejoiced very heartily when he was got on board the ship to return to England; and that in his new resolutions he had reconciled himself to the prosecution of his former profession, and intended to set up for a predictor again as soon as he could arrive at London. But now fortune had not a mind to let him go off so; he had had his own fancy for rambling, and now she was resolved to have hers, and to give him his bellyful of caprice. Accordingly, when the Dutch ship, called Yowfrow Catherine, was making the best of her road for London, and each person in the vessel was making merry, filled with the hopes of a quick and prosperous passage, a French privateer appeared in sight, crowding all the sails she could, and bearing towards them with all haste and diligence. The privateer was double-manned, and carried thirty guns; the Dutch vessel was defenceless in comparison; and the people on board had scarce time to think, and to deplore that they should be made a prey of, before they actually were so, and

had reason enough given them for their sorrow. All the passengers, to a single man, were stripped, and had French seamen's jackets in exchange for their clothes. Duncan Campbell had now a taste given him of the fate of war, as well as of the humour of travelling, and wished himself again, I warrant him, among his greatest crowd of consultants, as tiresome as he thought business to be, instead of being in the middle of a crew of sea savages. The town where the dumb prisoner was at last confined was Denain. There happened to be some English friars there, who were told by the others who he was, and to them he applied himself in writing, and received from them a great deal of civil treatment. But a certain man of the order of Recollects, happening to see him there, who had known him in England, and what profession he followed, caused him to be called to question, as a man that made use of ill means to tell fortunes. When he was questioned by a whole society of these religious men, he made them such pertinent and satisfactory answers in writing, that he convinced them he had done nothing for which he deserved their reprimand; and they unanimously acquitted him. The heads of his defence, as I have been informed, were these:—

First, he alleged that the second-sight was inborn and inbred in some men; and that every country had had examples of it more or less; but that the country of Scotland, in which he was educated from an infant, abounded the most of any with those sort of people; and from thence he said he thought he might very naturally draw this conclusion, that a faculty that was inborn and inbred to men, and grown almost a national faculty among a people who were remarkably honest, upright, and well-meaning people, could not, without some impiety, be imputed to the possessors of it as a sin; and when one of the fathers rejoined that it was remarked by several writers of the second-sight, that it must be therefore sinful, because it remained no longer among the people when the doctrines of Christianity were fully propagated, and the light of the gospel increased among them; and that afterwards it affected none but persons of vicious lives and an ill character; to this objection Mr. Campbell replied, that he knew most (even ingenious) writers had made that remark concerning the second-sight, but begged leave to be excused, if he ventured to declare that it was no better than a vulgar and

common error; and the reasons were these, which he alleged in his own behalf; and to confirm his assertion, he told them men of undoubted probity, virtue, and learning, both of their own religion, viz., the Roman Catholic, and also of the reformed religion, and in several nations, had been affected, and continued all their lives to be affected, with this second-sighted power, and that there could be, therefore, no room to fix upon it the odious character of being a sinful and vicious, not to say that some called it still worse, a diabolical talent. He said he would content himself with making but two instances, because he believed those two would be enough to give content to them, his judges too, in that case. In his first instance he told them that they might find somewhat relating to this in Nicolaus Hemingius, who, in his tracts *de Superstitionibus Magicis*, printed at Copenhagen, anno 1575, informs the world, that Petrus Palladius, a bishop of Seelandt, and professor of divinity at Copenhagen, could, from a part of his body affected, foretell from what part of the heavens tempests would come, and was seldom deceived. One of the fathers immediately asked him if he understood Latin? To this Duncan Campbell replied, No. Oh! said the friar, then, I don't remember that book was ever translated into English, that you mention. But, rejoined Duncan Campbell, the passage I mentioned to you, I have read in an English book, and word for word, according to the best of my memory, as I have written it down to you. In what English book? said the friar. I don't remember the name of the book, Duncan Campbell answered, but very well remember the passages, and that it was in a book of authority, and which bore a credit and good repute in the world; and you, being scholars, may, if you please, have recourse to the learned original, and I doubt not but you'll find what I say to be a truth. For the second instance, he told them, that in Spain, there are those they call *Saludadores*, that have this kind of gift. There was, continued he, in writing, one of your own religion, venerable fathers, and of a religious order, nay, a friar too, that had this gift. He was a noted Dominican, said he, and though I forget his name, you may, by writing a letter to England, learn his name. He was a devout Portuguese, belonging to Queen Catherine Dowager's chapel, and had the second-sight to a great degree, and was famous and eminent for it. They then asked him what was

the full power he had to do by the second-sight. He answered, that as they had intimated that they had perused some of the skilful writers concerning the second-sight, he did not doubt but they had found, as well as he could tell them, that as to the extent of people's knowledge in that secret way, it reached both present, past, and future events. They foresee murders, drownings, weddings, burials, combats, manslaughters, &c., all of which there are many instances to be given. They commonly foresee sad events a little while before they happen; for instance, if a man's fatal end be hanging, they will see a gibbet, or rope about his neck; if beheading, they will see a man without a head; if drowning, they will see water up to his throat; if stabbing, they will see a dagger in his breast; if unexpected death in his bed, they will see a windingsheet about his head. They foretell not only marriages, but of good children; what kind of life men shall lead, and in what condition they shall die; also riches, honours, preferments, peace, plenty, and good weather. It is likewise usual with persons that have lost anything to go to some of these men, by whom they are directed how, with what persons, and in what place they shall find their goods. It is also to be noted that these gifts bear a latitude, so that some have it in a far more eminent degree than others; and what I have here written down to you, you need not take as a truth from me; but as it concerned me so nearly, I remember the passage by heart, and you will find it very near word for word in Dr. Beaumont's book *Of Familiar Spirits*. Aye, said the friars, but you have a genius too that attends you, as we are informed. So, replied Duncan Campbell, have all persons that have the second-sight in any eminent degree; and to prove this I will bring no less a witness than King James, who, in his *Demonology*, book the third and chapter the second, mentions also a spirit called Brownie, that was wont formerly to haunt divers houses, without doing any evil, but doing, as it were, necessary turns up and down the house; he appeared like a rough man, nay, some believed that their house was all the 'sonsier,' as they called it, that is, the more lucky or fortunate, that such spirits resorted there. With these replies the friars began to own they were very well satisfied, and acquiesced in the account he had given of himself as a very good, true, and honest account; but they told him they had still a farther accusation against

him, and that was, that he practised magic arts, and that he used, as they had been informed, unlawful incantations. To this he made answer, that there were two kinds of magic, of which he knew they that were men of learning could not be ignorant. The art of magic, which is wicked and impious, continued he, is that which is professed, and has been professed at all times in the world, by witches, magicians, diviners, enchanters, and such like notorious profligates; who, by having an unnatural commerce with the devil, do many strange, prodigious, and preternatural acts, above and beyond all human wisdom; and all the arguments I ever did, or ever will deduce, continued he, from that black art, is a good and shining argument; it is this, O fathers: I draw a reason from these prodigious practices of wizards, magicians, enchanters, &c., and from all the heathen idolatry and superstition, to prove that there is a Deity; for from these acts of theirs, being preternatural and above human wisdom, we may consequently infer that they proceed from a supernatural and immaterial cause, such as demons are. And this is all the knowledge I ever did or ever will draw from that black hellish art. But, fathers, there is another kind of art magic, called natural magic, which is directly opposite to theirs, and the object of which art is to do spiritual good to mankind, as the object of theirs is to torment them, and induce them to evil. They afflict people with torments, and my art relieves them from the torments they cause. The public profession of these magical arts has, as you know, fathers, it is a common distinction, between black and white magic, been tolerated in some of the most famous universities of Christendom, though afterwards for a very good reason in politics, making it a public study to such a degree was very wisely retrenched by prohibition. If this, therefore, be a fault in your own opinions, hear my accusers, but if not, you will not only excuse, but commend me.

The friars were extremely well pleased with his defence, but one of them had a mind to frighten him a little if he could, and asked him what he would say if he could produce some witches lately seized, that would swear he had been frequently at their unlawful assemblies, where they were making their waxen images and other odd mischievous inventions in black magic, to torment folks; what if I can produce such evidence against you, wrote the father to him, by way of strength-

ening the question, will you not own that we have convicted you then? And when he had wrote the note, he gave it Duncan Campbell, with a look that seemed to express his warmth and eagerness in the expostulation. Duncan Campbell took the paper and read it, and far from being startled, returned this answer, with a smile continuing in his face while he wrote it. No, said he, fathers, by your leave, they will only prove me a good magician by that oath, and themselves more plainly witches. They will prove their love to torment good folks, and only show their hatred to me, an innocent man, but wise enough to torment them by hindering them from tormenting others. The fathers were well pleased with the shrewdness of the answer; but Duncan Campbell had a mind to exert his genius a little farther with the good friar, who thought likewise he had put him a very shrewd question; so taking up another sheet of paper, Fathers, said he, shall I entertain you with a story of what passed upon this head, between two religious fathers, as you all of you are, and a prince of Germany, in which you will find that mine ought to be reputed a full answer to the question the last learned father was pleased to propose to me? The story is somewhat long, but very much to the purpose and entertaining; I remember it perfectly by heart, and if you will have patience while I am writing it, I do not doubt but that I shall not only satisfy you, but please you and oblige you with the relation. The author I found it in, quotes it from Fromannus, (I think the man's name was so, and I am sure my author calls him a very learned man,) in his third book of Magical Incantation, and though I do not understand the language the original is writ in, yet I dare venture to say upon the credit of my English author, from whom I got the story by heart, that you will find me right whenever you shall be pleased to search.

The friars were earnest for the story, and expressed a desire that he would write it down for them to read, which he did in the following words. Note—that I have since compared Mr. Duncan Campbell's manuscript with the author's page out of which he took it, and find it word for word the same; which shows how incomparable a memory this deaf and dumb gentleman has got, besides his other extraordinary qualifications. The story is this:—

A prince of Germany invited two religious fathers, of

eminent virtue and learning, to a dinner. The prince, at table, said to one of them : Father, think you we do right in hanging persons, who are accused by ten or twelve witehes, to have appeared at their meetings or sabbaths? I somewhat fear we are imposed on by the devil, and that it is not a safe way to truth, that we walk in by these aecusations; espeially since many great and learned men everywhere begin to ery out against it, and to echarge our consciences with it; tell me, therefore, your opinion. To whom the fathers, being somewhat of an eager spirit, said; What should make us doubtful in this case? Or what should touch our consciences, being convicted by so many testimonies? Can we make it a seruple, whether God will permit innocent persons should be so traduced? there is no cause for a judge to stick at such a number of accusations, but he may proceed with safety. To which, when the prince had replied, and much had been said *pro* and *con* on both sides about it, and the father seemed wholly to earry the point, the prince at length coneluded the dispute; saying, I am sorry for you, father, that in a eapital cause you have condemned yourself, and you eannot eomplain if I commit you to eustody; for no less than fifteen witehes have deposed that they have seen you, ay, start not! you your ownself, at their meetings; and to show you that I am not in jest, I will presently eause the public acts to be brought for you to read them. The father stood in a maze, and with a dejected countenance had nothing here to oppose but confusion and silence, for all his learned eloquenee.

As soon as Mr. Campbell had wrote down the story, the fathers perused it, and seemed mightily entertained with it. It put an end to all farther questions, and the man whom they had been trying for a eonjuror, they joined in desiring, upon distinct pieces of paper, under their several hands, to come frequently and visit them, as being not only a harmless and innoeent, but an extraordinary well-meaning, good, and diverting eompanion. They treated him for some time afterwards during his stay, with the friendship due to a eountryman, with the civility that is owing to a gentleman, and with the assistanee and support which belonged to a person of merit in distress. Money they had none themselves, it seems, to give him, being Mendieants by their own profession; but they had interest enough to get him quite free from being prisoner;

he participated of their eleemosynary table, had a cell allowed him among them in what they call their Dormitory; he had an odd coat and a pair of trowsers made out of some of their brown coarse habits, by the poor unfashionable tailor, or botcher, belonging to the convent, and at last they found means of recommending him to a master of a French vessel that was ready to set sail, to give him a cast over the channel to England; and to provide him with the necessaries of life till he got to the port. This French vessel was luckier than the Dutch one had been before to our dumb gentleman; it had a quick and prosperous passage, and arrived at Portsmouth; and as soon as he landed there, he having experienced the misfortunes and casualties that a man in his condition, wanting both speech and hearing, was liable to, in places where he was an utter stranger to everybody, resolved to make no stay, but move on as fast as he could towards London. When he came to Hampton town, considering the indifferent figure he made in those odd kind of clothes, which the poor friars had equipped him with, and that his long beard and an uncombed wig added much to the disguise, he was resolved to put on the best face he could, in those awkward circumstances, and stepped into the first barber's shop he came at to be trimmed and get his wig combed and powdered. This proved a very lucky thought to him; for as soon as he stepped into the first barber's shop, who should prove to be the master of it, but one Tobit Yeats, who had served him in the same capacity at London, and was but newly set up in the trade of a barber-surgeon, at Hampton town, and followed likewise the profession of schoolmaster. This Tobit Yeats had shaved him quite, before he knew him in that disguise; and Mr. Campbell, though he knew him presently, had a mind to try if he should be known himself first; at length the barber finding him to be a dumb man, by his ordering everything with motions of the hand and gestures of the body, looked at him very earnestly, remembered him, and in a great surprise called for pen, ink, and paper, and begged to know how he came to be in that disguise; whether he was under any misfortune, and apprehension of being discovered, that made him go in so poor and so clownish a habit, and tendered him any services, as far as his little capacity would reach, and desired him to be free, and command him; if he was able to assist him in any-

thing. These were the most comfortable words that Duncan Campbell had read a great while. He took the pen and paper in his turn; related to him his whole story, gave the poor barber thanks for his good natured offer, and said he would make so much use of it, as to be indebted to him for so much money as would pay the stage-coach, and bear him in his travelling expenses up to London, from whence he would speedily return the favour with interest. The poor honest fellow, out of gratitude to a master whose liberality he had formerly experienced, immediately furnished Mr. Duncan Campbell with that little supply, expressing the gladness of his heart that it lay in his power; and the stage-coach being to set out within but a few hours, he ran instantly to the inn to see if he could get him a place. By good luck, there was room, and but just room for one more, which pleased Duncan Campbell mightily, when he was acquainted with it by his true and trusty servant the barber; for he was as impatient to see London again, it seems, as he had been before to quit it. Well, he had his wish; and when he came to London, he had one wish more for Fortune to bestow upon him, which appeared to begin to grow kind again, after her fickle fit of cruelty was over; and this wish was, that he might find his former lodgings empty, and live in the same house as he did when he followed his profession. This too succeeded according to his desire, and he was happily fixed once more to his heart's content in his old residence, with the same people of the house round about him, who bore him all that respect and affection, and showed all that readiness and willingness to serve him on every occasion and at every turn, which could be expected from persons that let lodgings in town to a gentleman, whom they esteemed the best tenant they ever had in their lives, or ever could have.

Immediately the tidings of the dumb gentleman's being returned home from beyond sea, spread throughout all the neighbourhood; and it was noised about from one neighbourhood to another, till it went through all ranks and conditions, and was known as well in a day or two's time, all the town over, as if he had been some great man belonging to the state, and his arrival had been notified to the public in the gazette, as a person of the last importance. And such a person he appeared indeed to be taken for, especially among

the fair sex, who thronged to his doors, crowd after crowd, to consult with him about their future occurrences in life.

These curious tribes of people were as various in their persons, sex, age, quality, profession, art, trade, as they were in the curiosity of their minds, and the questions they had intended to propound to this dumb predictor of strange events, that lay yet as embryos in the womb of time, and were not to come, some of them, to a maturity for birth, for very many years after; just as porcelain clay is stored up in the earth by good artificers, which their heirs make china of, half a century, and sometimes more than an age, afterwards.

These shoals of customers, who were to fee him well for his advice, as we may suppose, now he stood in need of raising a fresh stock, were unquestionably as welcome and acceptable to him as they appeared too troublesome to him before, when he was in a state of more wealth and plenty.

Fortune, that does nothing moderately, seemed now resolved, as she had been extremely cruel before, to be extremely kind to him. He had nothing to do from early in the morning till late at night, but to read questions, and resolve them as fast as much-frequented doctors write their prescriptions and recipes, and like them also to receive fees as fast. Fortune was indeed mightily indulgent to the wants she had so suddenly reduced him to, and relieved him as suddenly by these knots of curiosos, who brought him a glut of money. But one single fair lady, that was one of his very first consulters after his return, and who had received satisfactory answers from him in other points, before he went abroad, proved, so good fortune would have it, worth all the rest of his customers together, as numerous as they were, and as I have accordingly represented them.

This lady was the relict or widow of a gentleman of a good estate, and of a very good family, whose name was Digby, and a handsome jointure she had out of the estate. This lady, it seems, having been with him in former days, and seen him in a more shining way of life, (for he had taken a humour to appear before all his company in that coarse odd dress made out of the friar's habit, and would not be persuaded by the people of the house to put on a nightgown till he could provide himself with a new suit,) was so curious, among other questions, as to ask him whether he had met with any misfortunes, and how he came to be in so

slovenly and wretched a habit? Here Mr. Campbell related the whole story of his travels to her, and the crosses and disappointments he had met with abroad. The tears, he observed, would start every now and then into her eyes when she came to any doleful passage, and she appeared to have a mighty compassionate kind of feeling, when she read of any hardship more than ordinarily melancholy that had befallen him. Mr. Campbell, it is certain, had then a very good presence, and was a handsome and portly young man; and as a great many young gentlemen derive the seeming agreeableness of their persons from the tailor and peruke-maker, the shoemaker and hosier, so Mr. Campbell's person, on the other hand, gave a good air and a good look to the awkward garb he had on; and I believe it was from seeing him in this odd trim, as they called it, the ladies first took up the humour of calling him 'the handsome sloven:' add to this that he looked his misfortune in the face with a jolly countenance, and smiled even while he was penning the relation of his calamities; all which are certainly circumstances that first sooth a generous mind into a state of compassion, and afterwards heighten it in the breast wherein it is conceived. Hence it came that this pretty and good natured widow, Mrs. Digby, when she had expressed her commiseration of him by her looks, began to take the pen and express it in very tender terms. Neither did she think that expression in words a sufficient testimony of the compassion she bore to him; the generosity of her mind did lead her to express it in a more substantial manner still, and that was to show it plainly by a very benevolous action. She laid a purse of twenty guineas before the table, and at the same time smiling, pointed to the table, as signifying her desire that he would accept it, and running to the door, dropped a curtsy, and skuttled away; and by the same civil act as she obliged him, she put it out of his power to refuse being so obliged; so that, though the present was very handsome, the manner of giving it was still handsomer. If being a handsome young man of merit in distress, and bearing his misfortunes with an equal mind, are powerful motives to excite compassion in the mind of a generous lady, so the generosity of a young agreeable widow, expressed in so kind and so benevolous a way, to a young gentleman, when he had been tasting nothing but the bitter draughts of fortune before,

must stir up an affection in a mind that had any sense of gratitude ; and truly just such was the effect that this lady's civility had upon Mr. Dunean Campbell. He conceived from that moment a very great affection for her ; and resolved to try whether he could gain her, which he had no small grounds to hope, from the esteem which she appeared to bear towards him already. I remember Mr. Dryden makes a very beautiful observation of the near alliance there is between the two passions of pity and love in a woman's breast, in one of his plays. His words are these ; For pity still foreruns approaching love, as lightning does the thunder. Mr. Bruyere, a most ingenious member of the French Academy, has made another remark, which comes home to our present purpose. He says, That many women love their money better than their friends ; but yet value their lovers more than their money. According to the two reflections of these fine writers upon the tempers of the fair, Mr. Campbell had hopes enough to ground his courtship upon ; and it appeared so in the end, by his proving successful ; she from being a very liberal and friendly elient, became at last a most affectionate wife. He then began to be a house-keeper, and accordingly took a little neat one, and very commodious for his profession, in Monmouth-court. Here I must take leave to make this observation ; that if Mr. Campbell inherited the talents of his second-sighted mother, he seemed likewise to be an heir to his father, Mr. Archibald Campbell, both in his strange and accidental sufferings by sea, and likewise in his being relieved from them after an accidental and strange a manner, by an unexpected marriage, just like his father's. And here we return again to take a new survey of him in the course of his public practice as a predictor. The accounts I shall give of his actions here, will be very various in their nature from any I have yet presented to the reader ; they are more mysterious in themselves, and yet I shall endeavour to make the manner of his operating in this kind as plain as I think I have the foregoing ones, and then I flatter myself they must afford a fresh entertainment for every reader that has any curiosity and a good taste for things of so extraordinary a kind. For what I have all along propounded to myself from the beginning and in the progress to the end of this history, is to interweave entertaining and surprising narratives of what Mr.

Campbell has done, with curious and instructive inquiries into the nature of those actions, for which he has rendered himself so singularly famous. It was not, therefore, suitable to my purpose, to clog the reader with numerous adventures, almost all of the same kind, but out of a vast number of them to single some few of those that were most remarkable, and that were mysteries, but mysteries of very different sorts. I leave that method of swelling distorted and commented trifles into volumes, to the writers of fable and romance; if I was to tell his adventures, with regard, for example, to women, that came to consult him, I might perhaps have not only written the stories of eleven thousand virgins that died maids, but have had relations to give of as many married women and widows, and the work would have been endless. All that I shall do therefore is to pick out one particular, each of a different kind, that there may be variety in the entertainment. Upon application to this dumb man, one is told in the middle of her health, that she shall die at such a time; another, that she shall sicken, and upon the moment of her recovery, have a suitor and a husband; a third, who is a celebrated beauty with a multitude of admirers round about her, that she shall never become a wife; a fourth, that is married, when she shall get rid of an uneasy husband; a fifth, that hath lost her goods, who stole them, where and when they shall be restored; a sixth, that is a merchant, when he shall be undone, and how and when he shall recover his losses, and be as great on the Exchange as ever; a seventh, that is a gamester, which will be his winning, and which his losing hour; an eighth, how he shall be involved in a law-suit, and whether the suit will have an adverse or a prosperous issue; a ninth, that is a woman, with choice of lovers, which she shall be most happy with for life; and so on to many others, where every prediction is perfectly new and surprising, and differs from the other in almost every circumstance. When a man has so extensive a genius as this at foretelling the future occurrences of life, one narrative of a sort is enough in conscience to present the reader with, and several of each kind would not methinks be entertaining, but tiresome; for he that can do one thing in these kinds by the power of prediction, can do ten thousand; and those who are obstinate in extenuating his talents, and calling his capacity in question, and that will not be convinced by

one instance of his judgment, would not own the conviction if ten thousand instances were given them. The best passages I can recommend to their perusal are those where persons who came purposely to banter him under the colour of consulting him, and covered over their sly intentions with borrowed disguises, and came in masquerades, found all the jest turned upon themselves in the end, which they meant to our famous predictor, and had the discouragement of seeing their most concealed and deepest laid plots discovered, and all their most witty fetches and wily contrivances defeated, till they were compelled universally to acknowledge, that endeavouring to impose upon the judgment of our seer by any hidden artifice and cunning whatsoever, was effectually imposing upon their own. His unusual talent in this kind was so openly known, and so generally confessed, that his knowledge was celebrated in some of the most witty weekly papers that ever appeared in public. Isaac Bickerstaff, who diverted all the *beau monde*, for a long space of time with his lucubrations, takes occasion in several of his papers to applaud the speculations of this dumb gentleman in an admirable vein of pleasantry and humour, peculiar to the writer, and to the subject he writ upon. And when that bright author, who joined the uttermost facetiousness with the most solid improvements of morality and learning in his works, laid aside the title of a Tatler, and assumed the name of a Spectator and censor of men's actions, he still, every now and then, thought our Duncan Campbell a subject worthy enough to employ his farther considerations upon. I must take notice of one letter sent concerning him to the Spectator, in the year 1712, which was at a time when a lady wanted him, after he had removed from Monmouth-street to Drury-lane.

MR. SPECTATOR,—

About two years ago I was called upon by the younger part of a country family, by my mother's side related to me, to visit Mr. Campbell, the dumb man; for they told me that was chiefly what brought them to town, having heard wonders of him in Essex. I, who always wanted faith in such matters, was not easily prevailed on to go; but lest they should take it ill, I went with them, when, to my own surprise, Mr. Campbell related all their past life; in short, had he not been prevented, such a discovery would have come out, as

would have ruined their next design of coming to town, *viz.*, buying wedding eloths. Our names, though he had never heard of us before, and we endeavoured to conceal, were as familiar to him as to ourselves. To be sure, Mr. Spectator, he is a very learned and wise man. Being impatient to know my fortune, having paid my respects in a family Jacobus, he told me, after his manner, among several other things, that in a year and nine months I should fall ill of a new fever, be given over by my physieians, but should with much difficulty reeover; that the first time I took the air afterwards, I should be addressed to by a young gentleman of a plentiful fortune, good sense, and a generous spirit. Mr. Spectator, he is the purest man in the world, for all he said is come to pass, and I am the happiest she in Kent. I have been in quest of Mr. Campbell these three months, and eannot find him out; now hearing you are a dumb man too, I thought you might eorrespond and be able to tell me something; for I think myself highly obliged to make his fortune, as he has mine. It is very possible your worship, who has spies all over this town, can inform me how to send to him; if you can, I beseech you be as speedy as possible, and you will highly oblige your constant reader and admirer,

DULCIBELLA THANKLEY.

THE SPECTATOR'S ANSWER.

Ordered, that the inspector I employ about wonders, inquire at the Golden-lion opposite to the Half-moon tavern, in Drury-lane, into the merit of this silent sage, and report accordingly. Vide the 7th volume of Speetators, No. 474, being on Wednesday, September the 3rd, 1712.

But now let us come to those passages of his life the most surprising of all, during the time that he enjoyed this reputation, and when he proved that he deserved the fame he enjoyed. Let us take a survey of him while he is wonderfully curing persons labouring under the misfortune of witchcraft, of which the following story will be an eminent instance, and likewise clear up how he came by his reputation in Essex, as mentioned in the above-mentioned letter to the Spectator.

In the year 1709, Susanna Johnson, daughter to one Captain Johnson, who lived at a place adjacent to Rumford,

in Essex, going one morning to that town to buy butter at the market, was met there by an old miserable looking woman, just as she had taken some of her echange of the marketwoman, in eopper, and this old woman rather demanded than begged the gentlewoman to give her a penny. Miss Johnson reputing her to be one of those hateful people that are called sturdy beggars, refused it her, as thinking it to be no act of eharity, and that it would be rather gratifying and indulging her impudenee, than supplying or satisfying her indigence. Upon the refusal, the old hag, with a faee more wrinkled still, if possible, by anger, than it was by age, took upon her to storm at young Miss Johnson very loudly, and to threaten and menae her; but when she found her common threats and menaees were of no avail, she swore she would be revenged of the young creature in so signal a manner, that she should repent the denial of that penny from her heart before she got home, and that it should eost her many pounds to get rid of the consequences of that denial and her anger. The poor innocent girl despised these last words likewise, and, getting up on horsebaek, returned homewards; but just as she got about half way, her horse stopped, and no means that she eould use would make him advance one single step; but she stayed awhile, to see if that would humour him to go on. At last the beast began to grow unruly, and snorted and trembled as if he had seen or smelt something that frightened him, and so fell a kicking desperately, till he threw the girl from the saddle, not being able to cling to it any longer, though a pretty good horsewoman of her years; so much were the horse's motions and plungings more than ordinarily violent.

As Providence would have it, she got not much harm by the fall, receiving only a little bruise in the right shoulder; but she was dreadfully frightened. This fear added wings to her feet, and brought her home as speedily of herself as she usually came on horsebaek. She immediately, without any other sign of illness than the palid colour with which fear had disordered the complexion of her faee, alarmed all the family at home with the story, took her bed upon it, complained of inward rackings of the belly, and was never at ease unless she lay doubled up together, her head to her knees, and her heels to her rump, just like a figure of 8. She could not be a single moment out of that posture without

shrieking out with the violence of anxious torments and racking pains.

In this condition of misery, amidst this agony of suffering, and in this double posture, was the poor wretched young gentlewoman brought to town; physicians were consulted about her, but in vain; she was carried to different hospitals for assistance, but their endeavours likewise proved ineffectual; at last she was conducted to the College of Physicians; and even the collective wisdom of the greatest sages and adepts in the science of physic was posed to give her any prescription that would do her service, and relieve her from the inexplicable malady she laboured under. The poor incurable creature was one constant subject of her complaining mother's discourse in every company she came into. It happened at last, and very providentially truly, that the mother was thus condoling the misfortune of her child among five or six ladies, and telling them, among other things, that by the most skilful persons she was looked upon to be bewitched, and that it was not within the power of physic to compass her recovery. They all having been acquainted with our Mr. Duncan Campbell, unanimously advised her to carry her daughter to his house, and consult with him about her. The mother was overjoyed at these tidings, and purposed to let no time slip where her child's health was so deeply concerned. She got the ladies to go with her and her child, to be eye-witnesses of so extraordinary a piece of practice, and so eminent a trial of skill.

As soon as this dismal object was brought into his room, Mr. Duncan Campbell lifted up her head and looked earnestly in her face, and in less than a minute's time signified to the company, that she was not only bewitched, but in as dreadful a condition almost as the man that had a legion of fiends within him.

At the reading of these words the unhappy creature raised up her head, turned her eyes upwards, and a smile, a thing she had been a stranger to for many months, overspread her whole face, and such a kind of colour as is the flushing of joy and gladness, and with an innocent tone of voice she said, she now had a firm belief she should shortly be delivered. The mother and the rest of the company were all in tears, but Mr. Campbell wrote to them that they should be of good heart, be easy and quiet for a few moments, and

they should be convinced that it was witchcraft, but happily convinced by seeing her so suddenly well again. This brought the company into pretty good temper; and a little after, Mr. Campbell desired she might be led up stairs into his chamber and left their alone with him for a little while; this occasioned some small female speculation, and as much mirth as their late sorrow, alleviated with the hopes of her cure, would permit.

This you may be sure was but a snatch of mirth, just as the nature of the thing would allow of; and all sorts of waggery being laid instantly aside, and removed almost as soon as conceived, the poor young thing was carried in that double posture up stairs. She had not been much above half an hour there, when by the help only of Mr. Campbell's arm she was led down stairs, and descended into that roomful of company as a miracle appearing in a machine from above; she was led backward and forward in the room, while all gazed at her for awhile with joyful astonishment, for no arrow was ever more straight than she. Mr. Campbell then prevailed with her to drink a glass of wine, and immediately after she evacuated wind, which she had not done for some months before, and found herself still more amended and easy; and then the mother making Mr. Campbell some small acknowledgment at that time, with the promise of more, and her daughter giving thanks, and all the company commending his skill, took their leaves and departed, with great demonstrations of joy. I shall here, to cut the story short, signify, that she came frequently afterwards to make her testimonials of gratitude to him, and continues to enjoy her health to this very day, at Greenwich, where she now lives, and will at any time, if called upon, make oath of the truth of this little history, as she told me herself with her own mouth.

The next thing, therefore, it behoves me to do in this chapter, is, to give some satisfactory account of magic, by which such seeming mysterious cures and operations are brought about.

This task I would perform in the most perspicuous and most convincing manner I can; for magic, I know, is held to be a very hard and difficult study by those learned, and universally unlawful and diabolical by those unlearned, who believe there is such a science attainable by human genius.

On the other hand, by some learned men, who believe there is no such science, it is represented as an inconsistent system of superstitions and chimeras; and again laughed at as such by the unlearned, who are of an incredulous temper; what I would therefore undertake to do in this place is to show the learned men, who believe there is such an art, that the attainment to a tolerable knowledge of the manner how magical practices may be brought about, is no such difficult matter as they have represented it to themselves; and by doing this I shall make the system of it so plain, that while the learned approve of it, the unlearned too, who are not of an unbelieving kind, may understand clearly what I say; and the learned men who have rejected this science as chimerical, may be clearly convinced it is real; and then there is nothing left but obstinate unbelieving ignorance, which I shall not here pretend by arguments to lead into sense, but leave it to the work of time. In fine, I will endeavour to induce men of sense to say, that what has been accounted mysterious, is delivered in a plain, easy, and convincing manner, and to own that they approve, while men of the lower class of understanding shall confess and acknowledge that they themselves understand it; and that what has hitherto been represented as arduous and difficult to a great genius, is adapted and rendered not only clear, but familiar to persons of middling talents. In this work, therefore, I shall follow the strictest order I can, which of all things render a discourse upon any subject the most clear; and that it may be plain to the commonest capacity, I will first set down what order I intend to follow.

First, I will speak of magic in general.

Secondly, Of magic under its several divisions and subdivisions.

Thirdly, Concerning the object of art, as it is good or bad.

Fourthly, Of the persons exercising that art in either capacity, of good or bad, and by what means they become capacitated to exercise it.

In the fifth place, I shall come to the several objections against the art of magic, and the refutation of those objections.

The first objection shall be against the existence of good and bad spirits; the refutation of which will consist in my

proving the existence of spirits, both good and bad, by reason and by experience.

The second objection that will be brought, is to contain an allegation that there are no such persons as witches now, and an argument to support that allegation, drawn from the incapacity and impossibility of any thing's making, while itself is incarnate, a contract with a spirit. This objection will be answered by proving the reality of witches from almost universal experience, and by explaining rationally the manner how the devils hold commerce with witches; which explanation is backed and authorised by the opinion of the most eminent divines, and the most learned physicians.

From hence, sixthly and lastly, We shall conclude on the side of the good magic, that as there are witches on the one hand that may afflict and torment persons with demons, so on the other hand there are lawful and good magicians that may cast out demons from people that are possessed with them.

And first as to magic in general. Magic consists in the spirit by faith, for faith is that magnet of the magicians by which they draw spirits to them, and by which spirits they do great things, that appear like miracles.

Secondly, Magic is divided into three sorts, viz., divine, natural, and diabolical. And natural magic is again subdivided into two kinds, simple and compound; and natural compound magic is again likewise divided into two kinds, viz., natural-divine magic, and natural-diabolical magic. Now, to give the reader a clear and a distinct notion of each several species of magic here mentioned, I set down the following definitions: Divine magic is a celestial science, in which all operations that are wonderfully brought about, are performed by the Spirit of God. Natural magic is a science in which all the mysterious acts that are wrought, are compassed by natural spirits. But as this natural magic may be exercised about things either in a manner indifferent in themselves, or mere morally good, and then it is mere natural magic; or else about things theologically good, and transcendently bad; and then it is not merely and natural magic, but mixed and compound. If natural magic be exercised about the most holy operations, it is then mixed with the divine, and may then be called, not improperly, natural-divine magic. But if natural magic troubles itself about compassing the wickedest practices, then is it promiscuous

with the demoniacal, and may not improperly be called natural-diabolical magic.

Thirdly, The object of this art is doing wonders out of the ordinary appearing course of nature, which tend either to great good or bad, by the help and mediation of spirits good and bad.

Fourthly, As to the persons exercising that art in either way, whether good or bad, and by what means they become capacitated to act it, the notion of this may be easily deduced from the notions of the art itself, as considered above in its each different species; for as all magic consists in a spirit, every magician acts by a spirit.

Divine magicians, that are of God, are spoke of in the sacred Book, and therefore I shall not mention the passages here, but pass them over, as I ought in a book like this, with a profound and reverential silence, as well as the other passages which speak of natural and demoniacal magicians; and in all I shall speak of them in this place, I shall only speak of them with regard to human reason and experience, and conclude this head with saying, that natural magicians work all things by the natural spirits of the elements; but that witches and demoniacal magicians, as Jannes and Jambres in Egypt were, work their magical performances by the spirit of demons, and it is by the means of these different spirits that these different magicians perform their different operations.

These things thus distinctly settled and explained, it is now we must come and ground the dispute between those who believe there are no such things as magicians of any kind, and those who assert there are of all the kinds above specified.

Those who contend there are, have recourse to experience, and relate many well-witnessed narratives, to prove that there have been in all times, and that there are still, magicians of all these kinds. But those who contend that there are no such persons, will give no ear to what the others call plain experience; they call the stories, let whatever witnesses appear to justify them, either fabulous legends invented by the authors, or else tricks of intellectual legerdemain imposed by the actors, upon the relators of those actions. Since, therefore, they say, though the believers in magic brag of experience never so much, it may be but a

fallible experience; they reasonably desire to know whether these gentlemen that stand for magic can answer the objections which they propose, to prove that the practice of magic, according to the system laid down, is inconsistent with reason, before they will yield their assent. Let the stories be never so numerous, appear never so credible, these unbelieving gentlemen desire to be tried by reason, and aver till that reason is given they will not be convinced by the number of stories, because, though numerous, they are stories still; neither will they believe them because they appear credible, because seeming so is not being so, and appearances, though never so fair, when they contradict reason, are not to be swallowed down with an implicit faith as so many realities. And thus far, no doubt, the gentlemen who are on the unbelieving side are very much in the right of it. The learned gentlemen, on the other hand, who are persuaded of this mighty mysterious power being lodged in the hands of magicians, answer, that they will take upon them to refute the most subtle objections brought by the learned unbelievers, and to reconcile the practicability of magical mysteries by the capacity of men who study that art, to right rules and laws of reasoning, and to show that some stories, though never so prodigious, which are told of magicians, demand the belief of wise men on two accounts; because as experience backs reason on the one hand, reason backs experience on the other, and so the issue of the whole argument, whether there are magicians or not, is thrown upon both experience and reason. These arguments on each side, I shall draw up fairly *pro* and *con*; for I do not pretend to be the inventor of them myself, they belong to other authors many years ago; be it enough for me to boast of, if I can draw them up in a better and closer form together than they have yet appeared in. In that I take upon myself a very great task; I erect myself as it were into a kind of a judge; I will sum up the evidences on both sides, and I shall, wherever I see occasion, intimate which side of the argument bears the most weight with me; but when I have enforced my opinion as far as I think needful, my readers, like a jury, are still at liberty to bring in their verdict just as they themselves shall see fit; and this naturally leads me where I promised to come to in the fifth part of this discourse, to the several objections against the power of art magic, and the refutation of those objections.

The First Objections being against the Existence of Spirits, and the Refutations thereof.

THE first objection which they who reject magic make use of, is, denying that there are any such things as spirits, about which, since those who defend the art say it entirely exerciseth itself, the objectors contend, that if they can make out that there are no such beings as spirits, all pretensions to the art must be entirely groundless, and for the future exploded.

To make this part out, that there are no spirits, the first man they produce on their side is undoubtedly one of very great credit and authority, inasmuch as he has justly borne for many centurics the title of a prince of philosophers. They say that Aristotle in his book *de Mundo*, reasons thus against the existence of spirits, viz., That since God can do all things of himself, he doth not stand in need of ministering angels and demons. A multitude of servants showing the weakness of a prince.

The gentlemen who defend the science make this reply, they allow the credit and authority of Aristotle as much as the objectors; but as the objectors themselves deny all the authorities for the spirits, and desire that reason may be the only ground they go upon, so the refuters, on their parts desire, that Aristotle's *ipse dixit* may not be absolutely passed upon them for argument; but that his words may be brought to the same touchstone of reason, and proved if they are standard. If this argument, say they, will hold good, Aristotle should not suppose intelligences moving the celestial spheres; for God sufficeth to move all without ministering spirits; nor would there be need of a sun in the world, for God can enlighten all things by himself, and so all second causes were to be taken away; therefore, there are angels and ministering spirits in the world, for the majesty of God, not for his want of them, and for order, not for his omnipotency. And here if the objectors return and say, who told you that there are spirits; Is not yours a precarious hypothesis? May not we have leave to recriminate in this place? Pray, who told Aristotle that there were intelligences that moved the celestial spheres? Is not this hypothesis as precarious as any man may pretend that of spirits to be? And we believe there are few philosophers

at present who agree with Aristotle in that opinion; and we dare pronounce this to be ours, that Aristotle took his intelligences from the Hebrews, who went according to the same whimsical, though pretty notion, which first gave rise to the fiction of the nine muses. But more than all this, it is a very great doubt among learned men, whether this book *de Mundo* be Aristotle's or no.

The next thing the objectors bring against the existence of spirits, is, that it is nonsense for men to say that there are such beings of which it is impossible for a man to have any notion, and they insist upon it that it is impossible for any man to form an idea of a spiritual substance. As to this part, the defendants rejoin, that they think our late most judicious Mr. Locke, in his elaborate and finished Essay on the Human Understanding, has fairly made out, that men have as clear a notion of a spiritual substance as they have of any corporeal substance, matter, or body; and that there is as much reason for admitting the existence of the one, as of the other; for that if they admit the latter, it is but humour in them to deny the former. It is in book the 2nd, chap. 29, where he reasons thus: "If a man will examine himself concerning his notion of pure substance in general he will find he has no other idea of it, but only a supposition of he knows not what support of such quality which are capable of producing simple ideas in us, which qualities are commonly called accidents. Thus, if we talk or think of any particular sort of corporeal substance, as horse, stone, &c., though the idea we have of either of them be but the complication or collection of those several simple ideas, or sensible qualities which we use to find united in the thing called horse, or stone; yet because we cannot conceive how they should subsist alone, not one in another, we suppose them to exist in, and be supported by some common subject; which support we denote by the name of substance, though it be certain we have no clear or distinct idea of that thing we suppose a support. The same happens concerning the operations of our mind, viz., thinking, reasoning, and fearing, &c., which we concluding not to subsist of themselves, and not apprehending how they can belong to body, we are apt to think these the actions of some substance which we call spirit; whereby it is evident, that having no other notion of matter, but something wherein those many sensible qualities which affect our

senses do subsist, by supposing a substance wherein thinking, knowing, doubting, and a power of moving, &c., do subsist, we have as clear a notion of the nature or substance of spirit, as we have of body: the one being supposed to be, without knowing what is, the substratum to those simple ideas which we have from without; and the other supposed, with a like ignorance of what it is, to be the substratum of these operations which we experiment in ourselves within. It is plain, then, that the idea of corporeal substance in matter, is as remote from our conceptions and apprehensions as that of spiritual substance, and therefore from our not having any notion of the substance of spirit, we can no more conclude its not existence, than we can for the same reason deny the existence of body; it being as rational to affirm there is no body, because we cannot know its essence, as it is called, or have the idea of the substance of matter, as to say, there is no spirit, because we know not its essence, or have no idea of a spiritual substance." Mr. Locke also, comparing our idea of spirit with our idea of body, thinks there may seem rather less obscurity in the former than the latter. Our idea of body he takes to be an extended solid substance, capable of communicating motion by impulse; and our idea of soul is a substance that thinks, and has a power of exciting motion in body by will or thought. Now, some perhaps will say they comprehend a thinking thing, which perhaps is true; but, he says, if they consider it well, they can no more comprehend an extended thing; and if they say, they know not what it is thinks in them, they mean they know not what the substance is of that thinking thing; no more, says he, do they know what the substance is of that solid thing; and if they say they know how not how they think, he says, neither do they know how they are extended, how the solid parts are united, or where to make extension, &c.

The learned Monsieur le Clerc, who generally knows how far human reason can bear, argues consonantly to what is before delivered by Mr. Locke, in his *Coronis*, added to the end of the fourth volume of his *Philosophical Works*, in the third edition of them, where he writes as followeth:—

“When we contemplate the corporeal nature, we can see nothing in it but extension, divisibility, solidity, mobility, and various determinations of quantity, or figures; which being so, it were a rash thing, and contrary to the laws of

right reasoning, to affirm other things of bodies ; and consequently from mere body nothing can be deduced by us, which is not joined in a necessary connection with the said properties ; therefore those who have thought the properties of perceiving by sense, of understanding, willing, imagining, remembering, and others the like, which have no affinity with corporeal things, to have risen from the body, have greatly transgressed in the method of right reasoning and philosophising, which hath been done by Epicurus, and those who have thought as he did, having affirmed our minds to be composed of corporeal atoms : but whence shall we say they have had their rise ? truly, they do not owe their rise to matter, which is wholly destitute of sense and thought, nor are they spontaneously sprung up from nothing, it being an ontological maxim of most evident truth, that nothing springs from nothing.”

Having thus given the reader the first objections made against the existence of spirits, and the refutations thereof, I must now frankly own on which side my opinion leans ; and for my part, it seems manifest to me that there are two beings ; we conceive very plainly and distinctly, viz., body and spirit, and that it would be as absurd and ridiculous to deny the existence of the one as of the other ; and really, if the refuters have got the better in their way of reasoning, they have still a much greater advantage over the objectors, when they come to back these reasons with fresh arguments drawn from experience. Of this, there having been many undoubted narratives given in the foregoing pages, concerning the apparitions of spirits, I shall refer the reader back again to them, and only subjoin here one or two instances, which may, if required, be proved upon oath, of spirits seen by two persons of our Duncan Campbell's own acquaintance. In the year 1711, one Mrs. Stephens and her daughter were together with Mr. Campbell, at the house of Mr. Ramell, a very great and noted weaver at Haggerstone, where the rainy weather detained them till late at night. Just after the clock struck twelve, they all of them went to the door to see if the rain had ceased, being extremely desirous to get home. As soon as ever they had opened the door and where all got together, there appeared before them a thing all in white, the face seemed of a dismal palid hue, but the eyes thereof fiery and flaming, like beacons, and of a

saucer size. It made its approaches to them till it came up within the space of about three yards of them, there it fixed and stood like a figure agaze, for some minutes; and they all stood likewise stiff, like the figure, frozen with fear, motionless, and speechless; when all of a sudden it vanished from their eyes, and that apparition to the sight was succeeded by a noise, or the appearance of a noise, like that which is occasioned by the fighting of twenty mastiff dogs.

Not long after, Mrs. Anne Stephens, who lived in Spital-fields, a woman well known by her great dealings with mercers upon Ludgate-hill, sitting in her house alone, and musing upon business, happened by accident to look behind her, and saw a dead corpse, to her thinking, lie extended upon the floor, just as a dead corpse should be, excepting that the foot of one leg was fixed on the ground, as it is in a bed when one lies with one knee up; she looked at it a long while, and by degrees at last stole her eyes from so unpleasing and unexpected an object. However, a strange kind of a curiosity overcame her fears, and she ventured a second time to turn her head that way, and saw it, as before, fixed for a considerable time longer, but durst not stir from her seat; she again withdrew her eyes from the horrible and melancholy spectacle, and resumed the courage, after a little reflection, of viewing it again, and resolved to ascertain herself if the vision was real, by getting up from her seat and going to it, but upon this third retrospection she found it vanished. This relation she writ down to Mr. Duncan Campbell, and has told before Mrs. Ramell, her own sister, and many other very creditable persons. Now as to these arguments from experience, I shall also deliver my opinion; I dispute not but that learned men, who have obstinate prepossessions, may produce plausible arguments why all things should be thought to be done by imposture which seem strange to them, and interfere with their belief; and truly thus far their humour may be indulged, that if only one person relates a very strange and surprising story, a man may be more apt to think it is possible for that person to lie, than that so strange a relation should be true; but if a considerable number of persons, of several countries, several religious, several professions, several ages, and those persons looked upon to be of as great sagacity as any the country

afford, agree in relations of the same kind, thought very strange and are ready to vouch the truth of them upon oath, after having well considered circumstances, I think it a violation of the law of nature to reject all these relations as fabulous, merely upon a self-presuming conceit, unless a man can fairly show the things to be impossible, or can demonstrate wherein those persons were imposed on; for from hence I form the following conclusive argument. What is possible according to reason, grows probable according to belief; where the possibility is attested to have reduced itself into action by persons of known credit and integrity. Now, not only the possibility of the existence of spirits, but the actual existence thereof is proved above by logical demonstration; therefore are we to believe both by the course of logical reason and moral faith, that those existences have appeared to men of credit, who have attested the reality thereof upon oath.

Second Objection against the Existence of Witches.

THESE objectors go on to say, that provided they should allow there is an existence of spirits, yet that would be still no argument how magic should subsist, because they deny that it is impossible for a man in his body to have a commerce, much less make a contract, with spirits; but here again the refuters allege they have both experience and reason on their sides. As a joint argument of reason and experience, they tell you, that the numerous witches which have in all countries been arraigned and condemned upon this occasion, are evident testimonies of this commerce and contract being held and made with spirits. They pretend to say, that these objectors call not their, the refuters, judgment so much in question, who contend that there is a magic art, as they call in question the judgment of all the wisest legislative powers in Christendom, who have universally agreed in enacting penal laws against such capital offenders.

But here the objectors return and say, that it being impossible for us to show the manner how such a contract should be made, we can never, but without reason, believe a thing to be, of which we can form no perfect idea. The refuters, on the other hand, reply with the learned Father le Brune, it is manifest that we can see but two sorts of beings, spirits and bodies; and that since we can reason but

according to our ideas, we ought to ascribe to spirits what cannot be produced by bodies. Indeed the author of the Republic of Learning, in the month of August, anno 1686, has given us a rough draught for writing a good tract of witchcraft, which he looks upon as a desideratum; where among other things, he writes thus: Since this age is the true time of systems, one should be contrived concerning the commerce that may be betwixt demons and men.

On this passage Father le Brune writes thus: "Doubtless here the author complies with the language of a great many persons, who, for want of attention and light, would have us put all religion in systems. Whatever regard I ought to have for many of those persons, I must not be afraid to say, that there is no system to be made of those truths, which we ought to learn distinctly by faith, because we must advance nothing here, but what we receive from the oracle. We must make a system to explain the effects of the loadstone, the ebbing and flowing of the sea, the motion of the planets; for that the cause of these effects is not evidently signified to us, and many may be conceived by us; and to determine us, we have need of a great number of observations, which by an exact induction may lead us to a cause that may satisfy all the phenomena. It is not the same in the truths of religion, we come not at them by groping, it were to be wished men spoke not of them, but after a decisive and infallible authority. It is thus we should speak of the power of demons, and of the commerce they have with men; it is of faith, that they have power, and that they attack men, and try to seduce them divers ways. It is true, indeed, they are sometimes permitted to have it over the just, though they have it not ordinarily, but over those that want faith, or fear not to partake of their works; and that to the last particularly, the disordered intelligences try to make exactly succeed what they wish; inspiring them to have recourse to certain practices by which those seducing spirits enter into commerce with men." Thus far Father le Brune. But still these objectors demand to know by what means this commerce may be held between demons and men, and urge us to describe the manner; or pretend that they have still reason to refuse coming into the belief of a thing which we would impose upon them, though wholly ignorant of it ourselves; to that the refuters answer thus; that both Christian

divines and physicians agree as to the manner how, which they are so curious in inquiring after, that demons stir up raptures and ecstasies in men, binding or loosing the exterior senses, and that either by stopping the pores of the brain, so that the spirits cannot pass forth, as it is done naturally by sleep, or by recalling the sensitive spirits from the outward senses to the inward organs, which he there retains; so the Devil renders women witches ecstatical and magicians, who while they lie fast asleep in one place, think they have been in divers places, and done many things. This the learned objectors say proceeds from no demon, but from the disease called an epilepsy; but, on the other hand, the more learned refuters insist upon it, that these ecstasies are not epileptic seizures; this, say they, appears from Bodin, in his Theatre of Universal Nature, where he says, That those who are wrapped by the Devil, feel neither stripes nor cuttings, nor no wresting of their limbs, nor burning tortures, nor the application of a red hot iron; nay, nor is the beat of the pulse, nor the motion of the heart perceived in them; but afterwards, returning to themselves, they feel most bitter pains of the wounds received, and tell of things done at six hundred miles' distance, and affirm themselves to have seen them done. The ingenious Dr. Ader, makes an admirable physical distinction between this kind of ecstasy and a syncope, or stupor caused by narcotic medicines. Sennertus, in his *Institutio Medica*, writes of the demoniacal sopor of witches, who think they are carried through the air, dance, feast, and have copulation with the devil, and do other things in their sleep, and afterwards believe the same things waking. Now, he says, whether they are really so carried in the air, &c., or being in a profound sleep, or only dream they are so carried, and persist in that opinion after they are awake, these facts or dreams cannot be natural; for it cannot be that there should be so great an agreement in dreams, of persons differing in place, temperament, age, sex, and studies, that in one night, and at the same hour, they should, in concert, dream of one and the same such meeting, and should agree as to the place, number, and quality of the persons, and the like circumstances; but such dreams are suggested from a preternatural cause, viz., from the devil to his confederate, by the divine

permission of an Almighty power, where punishments are to be permitted to be inflicted upon reprobate sinners.

Whence also, to those witches, sincerely converted, and refusing to be any more present at those diabolical meetings, those dreams no longer happen, which is a proof that they proceeded not before from a natural cause.

Here begins the great point of the dispute as to that branch of magic which we call natural magic. The objectors may tell us, that they will freely own that there may be an existence of spirits, that there may be an existence of witches, that by a divine power men may be influenced so far as to have a communication with good spirits, and that from thence they may become spiritual-divine magicians, they will likewise, perhaps, as freely grant, that by the intervention of a demon, things preternatural may be brought about by persons who have studied the demoniacal magic; but then what they principally insist upon is, that it must be contradictory to all human reason to imagine that there can be such a thing as natural magicians; and thus far they may form their argument. They say, that the persons, who contend for the magic art, own, that all that is brought about by magic, is by the assistance and help of a spirit, and that consequently what is effected by it must be preternatural; now, they say, it is a thing inconsistent, by a natural power, to bring about a preternatural effect; therefore, there can be no such thing as natural magic, which has within itself the efficacy of destroying those acts done by magicians in the diabolical.

To this the refuters take leave to reply, that the foundation upon which the argument is built is wrong grounded; they have admitted that, in diabolical art magic, there may be a commerce held between men and spirits, by which several preternatural effects may be brought about; and the reason they assign for it there is, because there is a preternatural agent concerned therein, the devil; but then, say they, in natural magic you can pretend to no such agent, and therefore to no such preternatural effect. This argument contains within it two fallacies; first, as to the commerce held between a man and a demon, there is nothing preternatural in getting the acquaintance; the will of the man is entirely natural, either naturally good,

or naturally corrupted; the black spirit that converseth with him, it is acknowledged is not so, but it is from the will of the man, not from the power vested in the devil, that the acquaintance first grows, therefore the acquaintance itself is natural, though it arises from the last corruption and depravations of nature; but being made with a preternatural existence, though the cause of the acquaintance be corruptedly natural, yet the intermediate cause or means after that acquaintance is not so, and therefore the effect of that intermediate cause may be wonderful, and seem to be out of the ordinary course of nature. Now, since it is generally allowed that there are natural spirits of the elements, as well as divine and infernal, what we have to prove is only this, that man by natural magic may have a commerce with natural spirits of their elements, as witches may have with the spirits or demons. Now, as we said before, the commerce itself depends upon the will of the person, and is therefore natural, and consequently may as well subsist between the one as the other; for the devil cannot force a man to hold a commerce with him whether he will or no. The second fallacy is calling the effect preternatural, no otherwise than as it connotes the agent that brought it about, which is a spiritual agent; for the effect is, in itself considered, natural, and brought about by second causes that are natural, by the devil's penetration, who is subtle enough to make use of them for such and such ends. Now men, by natural spirits, which are of a faculty thoroughly subtle, may as well with natural second causes compass the remedy of an evil spirit, as the devil is able to infect men with it. From these speculations a farther plain consequence may be deduced, how a man may, by the pure force of natural magic, cure a person that is infested with evils by a demon; for how is it that a demon infests anybody with his evil motions? It is true, he is a preternatural agent, but the evil effect he does is brought about by natural causes. For how does a demon stir up raptures or ecstasies in men? Why he does it, as we are told above, by binding or loosing the exterior senses, by stopping the pores of the brain, so that the spirits cannot pass forth; and this the art of physic can compass by its drugs, and sleep causes the same thing very naturally of itself; therefore, as the evil itself is natural, the remedy, that is natural, will certainly

overcome it. But then, say you, why cannot those persons be cured by physicians? I answer, not because their remedies are not in themselves sufficient to cure the evils themselves, but because generally physicians do not administer their drugs as Christians, but as physicians; and when they prescribe them to the sick they generally prescribe to them only purely considered as patients, not as Christians, and therein they come to fail; because the agent, the devil, is a subtle spirit, that brings the evil, and alters its situation before the remedy, which would master it otherwise, can take any effect; which agent, the devil, is employed by the horrible and impious faith of the antiphysician, viz., the black magician; but if the physician would act the Christian at the same time, so far as to have a faith that things ordained in the course of nature for the good of man, would have its effects in spite of a devil, if taken with a good faith by the patient; that all good things ordained to be for the natural recovery of men, if they took it with thankfulness to the sender, would have due effect; why then the natural spirits of the elements would resist the farther agency of the demoniacal spirit, and then nothing but the natural evil, caused at first by the demon, remaining in the person, without the farther superintendency of the demon, might demonstratively be taken away by the mere natural remedy or medicine. And thus good and pious physicians, making use of such proper remedies as their skill teaches them, and having an honest faith, that the goods of nature intended for the use and benefit of man, if received by the patient with the same good faith, is above the power of the devil to frustrate, may not improperly be called natural magicians. These arguments of mine I shall now take leave to back by experience.

Besides, what we have urged from reason, concerning the power of natural magic, we shall only subjoin, that divines themselves hold that natural magic, and also natural divinations and prophecies, are proved by quotations from that venerable writ which is their guide; and bring proofs from the same also, that by natural magic demons are also cast forth, but not all kinds of demons, and so many works of efficacy are wrought by natural magic: they tell you, such was the Pythonissa that raised the apparition to Saul, which appeared in a body of wind and air. Thus, if a person by

natural magic should cast out demons, it does not follow that this was also from divine magic; and if demons are cast out by natural magic, by one that is in the fear of God, it does not follow that he is a true magician of God; but if it exorbitates to demoniacal, then it is condemned: and when natural magic keeps within its bounds, the divines tell us it is not condemned in the venerable book, which is the Christian's sure guide. But, inasmuch as the lawfulness even of natural magic has been called in question by others, I shall, in an Appendix joined to this treatise, examine that matter, both according to the reasons of our English laws, and according to the best stated rules of casuistry that I am a master of; still submitting my judgment to the superior judgment of those who are professed divines and lawyers; and if my opinions prove erroneous, I am willing to retract them; and therefore, in this place, there remains nothing farther for me to do, but only, as I have shown, on the one hand, how natural magic, and its powerful operations, are proved by reason, to show, on the other hand, how far reason in these cases is likewise backed and supported by well-evidenced practice, and notorious experience. And to do this, after having mentioned one memorable instance, which I refer the reader to in the body of the book, concerning the performances of Mr. Greatrix, to which a Lord Orrery was a witness, in Ireland; I shall, to avoid prolixity, bring the other testimonials of practice, from the success which our Duncan Campbell himself has had in this way on other occasions.

In the year 1713, lived in Fenchurch-street, one Mr. Coates, a tobacco-merchant, who had been for many years sorely tormented in his body, and had had recourse for a cure to all the most eminent physieians of the age, even up to the great Dr. Rateliff himself; but all this mighty application for relief was still in vain; each doctour owned him a wonder and a mystery to physie, and left him as much a wonder as they found him. Neither could the professors of surgery guess at his ailment, or resolve the riddle of his distemper; and after having spent, from first to last, above a thousand pounds in search of proper remedies, they found the search ineffectual; the learned all agreed that it could proceed from nothing else than witchcraft; they had now indeed guessed the source of his illness, but it was an illness

of such a kind that, when they had found it out, they thought themselves not the proper persons to prescribe to him any remedies. That task was reserved, it seems, for our Duncan Campbell, who, upon somebody's information or other, was sent for to the bewitched patient Mr. Coates, who found him the wonder that the others had left him, but did wonders in undertaking and compassing his cure. I remember, one of the ingredients made use of was boiling his own water, but I cannot tell how it was used; and, upon turning over the books of some great physicians since, I have found, that they themselves have formerly delivered that as one part of the prescriptions for the cure of patients in like cases. But as there are other things which Mr. Campbell performs, that seem to require a mixture of the second-sight, and of this natural magic, before they can be brought about, I will entertain the reader with one or two passages of that sort likewise, and so conclude the history of this so singular a man's life and adventures.

In the year 1710, a gentlewoman lost about six pounds' worth of Flanders lace, and inasmuch as it was a present made to her husband, she was concerned as much as if it had been of twenty times the value; and a lady of her acquaintance coming to visit her, to whom she unfolded, among other things in discourse, this little disaster, the lady, smiling, replied with this question, Did you never hear, madam, of Mr. Duncan Campbell? It is but making your application to him, things that are lost are immediately found; the power of his knowledge exceeds even the power of laws; they but restrain, and frighten, and punish robbers, but he makes thieves expiate their guilt by the more virtuous way of turning restorers of the goods they have stolen. Madam, rejoined the losing gentlewoman, you smile when you tell me this; but really, as much a trifle as it is, since it was a present to my husband, I cannot help being sensibly concerned at it, a moment's disappointment to him in the least thing in nature, creates in me a greater uneasiness than the greatest disappointment to my single self could do in things of moment and importance. What makes me smile, said the lady, when I speak of it, or think of it, is the oddness and peculiarity of this man's talent in helping one to such things; but, without the least jest, I assure you, that I know, by experience, these things come within the compass of his

knowledge; and I must seriously tell you, for your farther satisfaction, that he has helped me, and several of my friends, to the finding again things lost, which were of great value. And is this, without laughing, true? said the losing fair, very gravely and demurely, like a person half believing, and desirous to be fully confirmed in such a belief. The lady she advised with did then ascertain her of the truth of the matter, alleging that, for a single half-guinea, he would inform her of her things, and describe the person that conveyed them away. No sooner was this gentlewoman convinced, but she was eager for the trial; solicited her friend to conduct her to Mr. Campbell, and, upon the first word of consent, she was hooded and scarfed immediately, and they coached it away in a trice to Mr. Campbell's house, whom they luckily found within.

The ladies had not been long seated before he wrote down the name of this new client of his, exactly as it was, viz., Mrs. Saxon. Then she was in good hopes, and with much confidence propounded to him the question about the lace. He paused but a very little while upon the matter, before he described the person that took it, and satisfied her that in two or three days she would be mistress of her lace again, and find it in some book, or corner of her room. She presented him a half-guinea, and was very contentedly going away, but Mr. Campbell very kindly stopped her, and signified to her, that, if she had no more to offer to him, he had something of more importance to reveal to her. She sat full of expectation while he wrote this new matter; and the paper he delivered to her contained the following account: As for the loss of a little bit of lace, it is a mere trifle; you have lost a great many hundreds of pounds, which your aunt (naming her name) left you, but you are bubbled out of that large sum. For while you was artfully required down stairs about some pretended business or other, one Mr. H—tt—n, conveyed your aunt's Will out of the desk, and several other things of value; and writing down the names of all the persons concerned, which put Mrs. Saxon in a great consternation, he concluded this paper, with bidding her go home with a contented mind, she should find her lace in a few days; and as she found that prediction proved true, she should afterwards come and consult about the rest.

When she came home, it seems, big at first with the thoughts of what she had been told, she rifled and ransacked every corner, but no lace was to be met with; all the next day she hunted in the like manner, but frightened the whole time as if she thought the devil was the only person could bring it, but all to no purpose; the third day her curiosity abated, she gave over the hopes of it, and took the prediction as a vain delusion, and that what she gave for it was only more money thrown away after what had been lost before. That very day, as it commonly happens in such cases, when she least dreamt of it, she lighted on it by accident and surprise. She ran with it in her hand immediately to her husband, and now she had recovered it again, told him of the loss of it, and the whole story of her having been at Mr. Campbell's about it; and then, amplifying the discourse about what he had told her besides, as to more considerable affairs, she said she resolved to go and consult him a little farther about them, and begged her husband to accompany her. He would fain have laughed her out of that opinion and intent, but the end was, she persuaded him into it, and prevailed upon him to seem at least very serious about the matter, and go with her to the oracle, assuring him there was no room for doubting the same success.

Well, to Mr. Campbell's they accordingly came; and after Mr. Saxon, in deference to his wife's desire, had paid our predictor a handsome complement of gold, Mr. Duncan Campbell saluted him in as grateful a manner, with the assurance that there was in Kent a little country house, with some lands appertaining to it, that was his in right of his wife; that he had the house, as it were, before his eyes, that though he had never substantially seen it, nor been near the place where it stood, he had seen it figuratively as if in exact painting and sculpture; that particularly it had four green trees before the door, from whence he was positive, that if Mr. Saxon went with him in quest of it, he should find it out, and know it as well the moment he come near it, as if he had been an inhabitant in it all his life.

Mr. Saxon, though somewhat of an unbeliever, yet must naturally wish to find it true, you may be sure, and yet partly doubting the event, and partly pleased with the visionary promise of a fortune he never expected, laughed very heartily at the oddness of the adventure, and said he

would consider whether it would not savour too much of Quixotism, to be at the expense of a journey on such frolics, and on such a chimerical foundation of airy hopes, and that then he would call again and let Mr. Campbell know his mind upon that point.

In every company he came into, it served for laughter and diversion; they all, however, agreed it was worth his while, since the journey would not be very expensive, to go it by way of frolic. His wife, one morning, saying that she did remember some talk of a house, and such things as Mr. Campbell had described, put him forward upon the adventure; and upon Mr. Saxon's proposing it to his brother Barnard, Mr. Barnard favoured the proposal as a joke, and agreed upon the country ramble. They came on horseback to Mr. Campbell's with a third horse, on which the dumb predictor was mounted, and so on they jogged into Kent, towards Sevenoaks, being the place which he described. The first day they set out was on a Saturday morning in June, and about five that afternoon they arrived at the Black Bull, at Sevenoaks, in Kent. It being a delicate evening, they took an agreeable walk up a fine hill, gracefully adorned with woods, to an old seat of the Earl of Dorset. Meeting by the way with an old servant of the earl, one Perkin, he offered Mr. Barnard, who it seems was his old acquaintance, to give them all a sight of the fine ancient seat.

After they had pleased themselves with viewing the antique nobility of that stately structure, this Perkin went back with them to their inn, the Bull, at Sevenoaks. They that could talk, were very merry in chat; and the dumb gentleman, who saw them laugh and wear all the signs of alacrity in their countenances, was resolved not to be behind with their tongues, and by dint of pen, ink, and paper, that he made signs should be brought in, was resolved, if one might be said to crack without noise, to crack his jest as well as the best of them; for it may be truly said of him, that he seldom comes into any, even diverting company, where he is not the most diverting man there, and the head, though we cannot call him the mouth, of the cheerful society. After having eyed this Perkin a little, and being grown, by his art, as we may suppose, as familiar with the man's humour as if he had known him as many years as Mr. Barnard, Pray, Mr. Barnard, quoth he, in writing, how comes it, you, that are so stanch and so stiff a whig, should be so acquainted

and so particularly familiar with such an old Papist, and so violent a Jacobite, as I know that Mr. Perkin (whom I never saw nor had any notice of in my life) to be? And pray, replied Mr. Barnard, what reason have you beyond a pun to take him for a Jacobite? Must he be so because his name is Perkin? I do assure you, in this you show yourself but little of a conjurer; if you can tell no more of houses than you do of men, we may give over the search after the house you spoke of. (Here the reader must understand they discoursed on their fingers, and wrote by turns.) Mr. Campbell replied, seriously, Laying a wager is no argument in other things, I own, but in this I know it is, because I am sure, after we have laid the wager, he will fairly confess it among friends, since it will go no farther; and I, said Mr. Campbell, will lay what wager you will apiece with you all round. Hereupon, Mr. Barnard, who had known him a great many years, was the first that laid, and many more, to the number of five or six, followed his example: the decision of the matter was deferred till next day at the return of the old man to the inn, they being about to break up that night and go to bed.

The next day being Sunday, the landlord carried his guests to see the country, and after a handsome walk, they came through the churchyard. They were poring upon the tombs; no delight can be greater to Mr. Campbell than that; and really, by the frequent walks he usually takes in Westminster abbey, and the churchyards adjacent to this metropolis, one would imagine he takes delight to stalk along by himself on that dumb silent ground, where the characters of the persons are only to be known, as his own meaning is, by writings and inscriptions on the marble. When they had sufficiently surveyed the churchyard, it grew near dinner-time, and they went homewards; but before they had got many yards out of the churchyard, Mr. Campbell makes a full stop, pointing up to a house, and stopping his friends a little, he pulls out of his pocket a pencil and paper, and notes down the following words: That, that is the house my vision presented to me; I could swear it to be the same, I know it to be the same, I am certain of it. The gentlemen with him remarked it, would not take any farther notice at that time intending to inquire into it with secrecy, and so went on to the inn to dinner.

As merry as they had been the night before after supper,

they were still more innocently cheerful this day after dinner, till the time of service begun. When the duty of the day was performed and over, they returned to divert and unbend their minds with pleasant but harmless conversation. I suppose nobody but a set of very great formalists will be offended with scandal or scruples, that to travellers just ready to depart the town, Mr. Perkin came on that good day and decided the wagers, by owning to all the company, secrecy being first enjoined, that he was a Roman Catholic, though nobody of the family knew it in so many years as he had lived there, which was before Mr. Campbell was born. This and other innocent speeches afforded as much cheerfulness as the Lord's-day would allow of.

On the next day, being Monday, they sent for one Mr. Toland Toler, an attorney of the place, to find out to whom that house belonged, but by all the inquiry that could possibly be made with convenient secrecy, nobody could find it out for a long time; but at last it came to light and appeared to be justly to a tittle as Mr. Campbell had predicted.

Being now satisfied, the next day our three travellers returned for London; and the two vocal men were very jocular upon their adventure, and by their outward gesticulations gave the prophetic mute his share of diversion. Mr. Barnard, as they passed into a farmhouse-yard, remarked that all the hogs fell a grunting and squeaking more and more as Mr. Campbell came nearer, (who, poor man! could know nothing of the jest, nor the cause of it, till they alighted and told it him by signs and writing,) said to Mr. Saxon, laughing, Now we have found out our house, we shall have only Mr. Campbell home again by himself—we have no farther need of the devil that accompanied him to the country, up to town with us, there are other devils enow to be met with there he knows; and so this, according to the fashion of his predecessor devils, is entered into the herd of swine.

However, the event of this journey, to cut the story short, procured Mr. Saxon a great insight, upon inquiry, into several affairs belonging to him, of which he would otherwise have had no knowledge; and he is now engaged in a chancery suit to do himself justice, and in a fair way of recovering great sums of money, which, without the consultation he

had with this dumb gentleman, he had in all likelihood never dreamt of.

In the year 1711, a gentleman, whose name shall be, in this place, Amandus, famed for his exquisite talents in all arts and sciences, but particularly for his gentlemanlike and entertaining manner of conversation, whose company was affected by all men of wit, who grew his friends, and courted by all ladies of an elegant taste, who grew his admirers; this accomplished gentleman, I say, came to Mr. Campbell, in order to propound a question to him, which was so very intricate, and so difficult to answer, that, if he did answer it, it might administer to himself and the ladies he brought with him, the pleasure of admiration in seeing a thing so wonderful in itself performed; or, on the other hand, if he did not make a satisfactory reply to it, then it might afford him and the ladies a very great delight, in being the first that puzzled a man who had had the reputation for so many years of being capable of baffling all the wittiest devices and shrewd stratagems that had been from time to time invented to baffle his skill and explode his penetration in the second-sight, and the arts which he pretended to. The persons whom Amandus brought with him, were the illustrious Lady Delphina, distinguished for her great quality, but still more celebrated for her beauty, his own lady, the admired Amabella, and a young blooming pretty virgin whom we will call by the name of Adeodata, about which last lady, the question was to be put to Mr. Campbell. Adeodata, it seems, was the natural daughter of this very fine gentleman, who had never let her into the knowledge of her own birth, but had bred her up from her infancy under a borrowed name, in the notion that she was a relation's daughter, and recommended to his care in her infancy. Now the man that had the second-sight was to be tried; it was now to be put to the proof if he could tell names or no? Amandus was so much an unbeliever as to be willing to hazard the discovery. Amabella and Delphina were strangers to her real name, and asked Duncan Campbell, not doubting but he would set down that which she ordinarily went by. Amabella had indeed been told by Amandus, that Adeodata was the natural daughter of a near friend of his; but who this near friend was remained a secret: that was the point which lay upon our Duncan Campbell to discover. When the question

was proposed to him, what her name was, he looked at her very steadfastly, and shook his head, and after some time he wrote down that it would be a very difficult name for him to fix upon. And truly so it proved; he toiled for every letter till he sweated; and the ladies laughed incontinently, imagining that he was in an agony of shame and confusion at finding himself posed. He desired Amandus to withdraw a little, for that he could not so well take a full and proper survey of ladies' faces when a gentleman was by. This disturbance and perplexity of his afforded them still more subject of mirth; and that excuse was taken as a pretence, and a put-off to cover his shame the better, and hide from one at least, that he was but a downright bungler in what he pretended to be so wonderful an artist. However, after two hours hard sweat and labour, and viewing the face in different shades and lights, (for I must observe to the reader that there is a vast deal of difference, some he can tell in a minute or two with ease, some not in less than four or five hours, and that with great trouble) he undeceived them with regard to his capacity. He wrote down that Adeodata's real name was Amanda, as being the natural daughter of Amandus. Delphina and Amabella were surprised at the discovery; and Amandus, when he was called in, owning it a truth, his wife Amabella applauded the curious way of her coming by such a discovery, when Adeodata was just marriageable, took a liking to her as if her own daughter, and everything ended with profit, mirth, and cheerfulness. I could add a thousand more adventures of Mr. Campbell's life, but that would prove tedious; and as the town has made a great demand for the book, it was thought more proper to conclude it here. The most diverting of all, are to be found best to the life in original letters that passed between Mr. Campbell and his correspondents, some select ones of which will be shortly published in a little pocket volume, for the farther entertainment of such readers as shall relish this treatise; in which the author hopes he shall be esteemed to have endeavoured at the intermingling of some curious disquisitions of learning, with entertaining passages, and to have ended all the merriest passages with a sober, instructive, and edifying moral, which even to those who are not willing to believe the stories, is reckoned sufficient to recommend even fables themselves.

APPENDIX.

It is not that Mr. Duncan Campbell stands in need of my arguments, to prove that he is in no respect liable to the Acts of Parliament made against fortunetellers, &c., that I undertake the writing of this Appendix, the true reason thereof being, the more completely to finish this undertaking; for having, in the body of the book itself, fully proved a second-sight, and that the same frequently happens to persons, some of them eminently remarkable for piety and learning, and have from thence accounted for the manner of Mr. Campbell's performing those things he professes, to the great surprise, and no less satisfaction of all the curious who are pleased to consult him; and at the same time proved the lawfulness of such his performances from the opinions of some of the most learned in holy science; I thought it not improper to add the following short Appendix, being a summary of several acts of parliament made against fortune-tellers, conjurers, Egyptians, sorcerers, pretenders to prophecy, &c., with some proper remarks, suited to our present purpose, as well to satisfy them who are fantastically wise, and obstinately shut their eyes against the most refulgent reason, and are wilfully deaf to the most convincing and persuasive arguments, and thereupon cry out, that Mr. Campbell is either an impostor and a cheat, or at least a person who acts by the assistance of unlawful powers; as also to put to silence the no less waspish curs, who are always snarling at such whom providence has distinguished by more excellent talents than their neighbours. True merit is always the mark against which traducers level their keenest darts; and wit and invention oftentimes join hands with ignorance and malice to foil those who excel. Art has no greater enemy than ignorance; and were there no such thing as vice, virtue would not shine with half its lustre. Did Mr. Campbell perform those wonderful things he is so deservedly famous for, as these cavillers say, by holding intelligence with infernal powers, or by any unjustifiable means, I am of opinion he would find very few, in this atheistical age, who would open their mouths against him, since none love to act counter to the interest of that master they industriously serve. And did he, on the other

hand, put the cheat upon the world, as they maliciously assert, I fancy he would then be more generally admired, especially in a country where the game is so universally, artfully, and no less profitably played, and that with applause since those pretenders to wisdom merrily divide the whole species of mankind into the two classes of knaves and fools, fixing the appellation of folly only upon those whom they think not wise, that is, wicked enough to have a share with them in the profitable guilt.

Our laws are as well intended by their wise makers to screen the innocent, as to punish the guilty; and where their penalties are remarkably severe, the guilt they punish is of a proportionable size. Art, which is a man's property, when acquired, claims a protection from those very laws which false pretenders thereto are to be tried and punished by, or else all science would soon have an end; for no man would dare make use of any talent providence had lent him, and his own industrious application had improved, should he be immediately tried and condemned by those statutes, which are made to suppress villains, by every conceited and half-learned pedant.

It is true, indeed, those excellent statutes, which are made against a sort of people, who pretend to fortune-telling and the like, are such as are well warranted, as being built upon the best foundation, viz., religion and policy; and were Mr. Campbell guilty of any such practice as those are made to punish, I openly declare, that I should be so far from endeavouring to defend his cause, that I would be one of the first that should aggravate his crime, thereby to enforce the speedier execution of those laws upon him, which are made against such offenders. But when he is so far from acting, that he doth not even pretend to any such practice, or for countenancing the same in others, as is manifest from the many detections he has made of that sort of villany, which the book furnishes us with, I think myself sufficiently justified for thus pleading in his defence.

I cannot but take notice, in reading the statutes made against such offenders, our wise legislature hath not in any part of them seemed so much as to imply that there are in reality any such wicked persons as they are made against, to wit, conjurors, &c., but that they are only pretenders to those infernal arts, as may reasonably be inferred from the

nature of the penalties they inflict; for our first laws of that sort only inflicted a penalty which affected the goods and liberty of the guilty, and not their lives, though indeed they were afterwards forced to heighten the punishment with a halter; not that they were better convinced, as I humbly conceive, but because the criminals were most commonly persons who had no goods to forfeit, and to whom their liberty was no otherwise valuable but as it gave them the opportunity of doing mischief. Indeed our law-books do furnish us with many instances of persons who have been tried and executed for witchcraft and sorcery, but then the wiser part of mankind have taken the liberty to condemn the magistrate, at that time of day, of too much inconsideration, and the juries of an equal share of credulity; and those who have suffered for such crimes, have been commonly persons of the lowest rank, whose poverty might occasion a dislike of them in their fellow-creatures, and their too artless defence subject them to their mistaken justice; so that, upon the whole, I take the liberty to conclude, and I hope not without good grounds, that those laws were made to deter men from an idle pretence to mysterious and unjustifiable arts, which, if too closely pursued, commonly lead them into the darkest villany, not only that of deceiving others, but, as far as in them lie, making themselves slaves to the devil; and not to prevent and hinder men from useful inquiries, and from the practice of such arts, which though they are in themselves mysterious, yet are, and may be lawful.

I would not, however, be thought, in contradiction to my former arguments, to assert that there never were, or that there now are no persons such as wizards, sorcerers, &c., for by so doing I should be as liable to be censured for my incredulity, as those who defame Mr. Campbell on that account are for their want of reason and common honesty. Holy and profane writ, I confess, furnishes us with many instances of such persons; but we must not from thence hastily infer, that all those men are such who are spitefully branded with the odious guilt; for were it in the devil's power to make every wicked man a wizard, and woman a witch, he soon would have agents enough to shake this lower world to atoms but the Almighty, who restrains him, likewise restrains those.

Having premised thus much, I shall now proceed to con-

sider some of the Acts of Parliament themselves; the persons against whom they were made, and the necessity of making the same. And some of the first Acts we meet with, were those which were made against a sort of people called Egyptians; persons who, if in reality such, might, if any, be suspected of practising what we call the black art, the same having been for many ages encouraged in their country; nay, so much has it been by them favoured, that it was introduced into their superstitious religion, if I may without an absurdity call it so, and made an essential part thereof; and, I believe, Mahometanism has not much mended the matter, since it has imperiously reigned there, or in any respect reformed that idolatrous nation. Now the mischief these persons might do, being so much in the devil's power, among the unwary, was thought too considerable not to be provided against; and therefore our wise legislature, the more effectually to prevent the same, by striking at the very foundation, made an act in 22 Henry VIII. 8: That if any, calling themselves Egyptians, do come into this realm, they shall forfeit all their goods; and being demanded, shall depart the realm within fifteen days, upon pain of imprisonment; and the importers of them, by another act, were made liable to a heavy penalty. This act was continued by the 1 Philip and Mary. Conjuratation, witchcraft, enchantment, and sorcery, to get money, or consume any person in his body, members, or goods, or to provoke any person to unlawful love, was by the 33 Henry VIII. 14. and the 5 Elizabeth 16. and the 1 James I. 12. made felony; and by the same 33 Henry VIII. 14. it was made felony to declare to another any false prophecies upon arms, &c., but this act was repealed by the 1 Edward VI. 12., but by another act of the 3 and 4 of Edward VI. 15. it was again enacted, That all such persons who should pretend to prophecies, &c., should, upon conviction, for the first offence forfeit ten pounds, and one year's imprisonment; and for the second offence, all his goods, and imprisonment for life. And by the 7 Edward VI. 11. the same was made to continue but till the then next sessions of parliament. And by the 5 Elizabeth 15. the same act was again renewed against fantastical prophesiers, &c., but both those acts were repealed by the 1 James I. 12.

Thus far we find, that for reasons of state, and for the punishment of particular persons, those acts were made and

repealed, as occasion required, and not kept on foot, nor indeed were they ever made use of, as I can remember in my reading, against any persons whose studies led them into a useful inquiry into the nature of things, or a lawful search into the workings of nature itself, by which means many things are foretold long before they come to pass, as eclipses and the like, which astrologers successfully do, whose art has been in all ages held in so great esteem that the first monarchs of the East made it their peculiar study, by which means they deservedly acquired to themselves the name of Magi, or wise men; but, on the contrary, were provided against persons profligate and loose, who, under a pretence and mask of science, commit vile and roguish cheats; and this will the more plainly appear, if we consider the letter and express meaning of the following Acts, wherein the persons I am speaking of, are described by such characters, which sufficiently prove the assertion; for in the 39 of Elizabeth 4. it was enacted, That all persons calling themselves scholars, going about begging, seafaring men pretending losses of their ships and goods at sea, and going about the country begging, or using any subtle craft, feigning themselves to have knowledge in physiognomy, palmistry, or any other the like crafty science, or pretending that they can tell destinies, fortunes, or such like fantastical imaginations, shall be taken and deemed rogues, vagabonds, sturdy beggars, and shall be stripped naked from the middle upwards, and whipped till his or her body be bloody. And by the 1 James I. 12. for the better restraining of the said offences, and for the farther punishing the same, it was farther enacted, That any person or persons using witchcraft, sorcery, &c., and all their aiders, abettors, and counsellors, being convicted, and attainted of the same offences, shall suffer pain of death, as felons, without the benefit of clergy; or to tell and declare in what place any treasure of gold and silver should or might be found in the earth, or other secret places; or where goods or things lost or stolen should be found or become; or to provoke any person to unlawful love, such offender to suffer imprisonment for one whole year without bail or mainprise, and once in every quarter of the said year shall in some market-town, or upon the market-day, or at any such time as any fair shall be kept there, stand openly in the pillory by the space of six hours, and there shall

openly confess his or their offence ; and for the second offence shall suffer death as felons, without the benefit of clergy.

That these laws were made against a set of villains, whose natural antipathy to honesty and labour furnished them with pretensions to an uncommon skill, thereby the more easily to gull and cheat the superstitiously credulous, and by that means discover from them some such secrets that might farther them in perpetrating the more consummate villany, is plain from the very words and expressions of the very Acts themselves, and the description of the persons they are made against ; and not, as I before observed, to prevent and hinder men from the lawful inquiry after useful, delightful, and profitable knowledge.

Mr. Campbell, who has been long a settled and reputable inhabitant in many eminent parts of the city of London, cannot, I am sure, be looked upon as one of those these Acts of Parliament were made against, unless we first strip the Acts themselves of their own natural, express, and plain meaning, and clothe them with that which is more obscure, unnatural, forced, and constrained a practise ; which, if allowed, would make them wound the innocent and clear the guilty, and render them not our defence but our greatest evil ; they would, by that means, become a perfect enigma, and be so far from being admired for their plainness, that they would be even exploded like the oracles of the heathen for their double meaning.

If Mr. Campbell has the second-sight, as is unquestionable, from the allowed maxim, that what has been may be again, and by that means can take a view of contingences and future events ; so long as he confines these notices of approaching occurrences to a good purpose, and makes use of them only innocently and charitably to warn persons from doing such things, that according to his conceptions would lead them into misfortune, or else in putting them upon such arts that may be of use and benefit to themselves and posterity, always having a strict regard to morality and religion, to which he truly adheres ; certainly, I think, he ought so much the more to be admired for the same, by how much the more this his excellent knowledge is surpassing that of other men, and not be therefore unjustly upbraided with the injurious character of a cheat, or an ill man : however, this I will presume to affirm, and I doubt not but to

have my opinion confirmed by the learned sages of the law, that this his innocent practice, and I venture to add, honest one too, doth by no means entitle him to the penalties of the before-mentioned laws made against fortune-tellers, and such sort of profligate wretches; which it is as great an absurdity to decry, as it would be to call him, who is a settled and reputable inhabitant, a stroller or wandering beggar.

Again; it is true that Mr. Campbell has relieved many that have been supposed to have been bewitched, as is related and well attested in the book of his life; but will any one from thence argue that he himself is a real conjurer, or wizard, because he breaks the chains by which those unhappy wretches were bound? No, surely; for if that were the case, we might then as well indict the physician who drives away a malignant distemper, and roots out its latent cause by his mysterious skill in plants and drugs; or conclude that the judge, who condemns a criminal, is for the same reason guilty of the self-same crime for which the offender is so by him condemned. Persons who delight in such unnatural conclusions, must certainly be in love with the greatest absurdities, and must entirely abandon their natural reason before they can be brought to conclude that the Prince of Darkness would assist men in destroying his own power.

The best answer I can afford those men is silence; for if they will not argue upon the principles of reason, or be guided by her dictates, I think them no more fit to be contended with in a rational and decent manner than bedlamites, and such who are bereft of all understanding. A rod is the best argument for the back of a fool, and contempt the best usage that ought to be shown to every headstrong and ignorant opponent.

In a word, I know of no branch of Mr. Campbell's practice that bears the least resemblance to those crimes mentioned in the foregoing Acts. That he can and doth tell people's names at first sight, though perfect strangers to him, is confessed by all who have made the curious inquiry at his hands; but what part of the Acts, I would fain know, is that against? Knowledge, and a clear sight into things not common, is not only an allowable, but a commendable qualification; and whether this knowledge in him be inherent, accidental, or the result of a long study, the case is still the same; since

we are assured he doth it by no unlawful intelligence, or makes use of the same to any ill purpose, and therefore is undoubtedly as lawful as to draw natural conclusions from right premises. Hard is the fate of any man to be ignorant, but much harder would his lot be if he were to be punished for being wise ; and, like Mr. Campbell, excelling others in this kind of knowledge.

Much more might be said in defence of Mr. Campbell and the art he professeth, but as the arguments which are brought against him by his enemies on the one hand, are trivial and ill-grounded, I therefore think they deserve no farther refutation ; so on the other, his innocency is too clear to require it.

After having thus taken a survey of Mr. Campbell's acts, with regard to their legality according to the statutes and the laws of the nation wherein he lives, we will consider next, whether, according to the stated rules of casuistry, among the great divines eminent for their authority, it may be lawful for Mr. Campbell to predict, or for good Christian persons to visit his house, and consult him about his predictions. I have upon this head examined all the learned casuists I could meet with in ancient times, for I cannot meet, in my reading, with any moderns that treat thoroughly upon this case, or I should rather have chosen them, because, perhaps, the second-sight was less known in those ancient days than it has been since, and so might escape their notice.

My design is first to give the reader a distinct summary of all that has been said of this matter, and to do it as succinctly and briefly as possible, and then to argue myself from what they agree upon as to this man's particular case.

That the reader may have recourse to the authors themselves, if they have a curiosity, and find that I do not go about to impose upon their judgments, I will here tell the reader where he may find the whole contents of the following little abstract of divinity and casuistry, because it would be a tedious piece of work to set down the words of each of them distinctly, and quote them every one round at the end of their several different sentences, which tend to the same meaning, but I will strictly keep to the sense of them all ; and I here give the reader their names, and the places, that he may consult them himself, if his inclination leads him to be so curious : Thomas Aquinas, iv. *Distin.* 34. *Quarstio.* 1.

Art. 3; Bona, ii. Dist. 7. Art. 2. Quæst. 1; Joannes Major, iv. Dist. 34. Quæst. 2; Sylvester, Verbo Malefico. Quæst. 8; Rosella, Verb Impedimentum, xv. cap. 18; Tabiena, Verb. Impedimentum, 12 vers.; Cajetan, tom. ii. Opusc. 12. de Malefic; Alphonsus, a Cast. lib. x. de Justa Hæreticorum Punitione, cap. 15; Cosmus Philarchus, de Offic. Sacerdot, p. 2. lib. iii. cap. 11; Toletus, in Summa. lib. iv., cap. 16; Spineus, in Tract. de Strigibus; Petrus Binsfield, in Tract. de Confessionibus Maleficorum.

These divines have generally written upon impious arts of magic, which they call by the name of divination; and this divination, as they term it, they divide into two kinds; the one, in which the devil is expressly invoked, to teach hidden and occult things; the other, in which he is tacitly called upon to do the same. An express invocation is made by word or deed, by which a real pact is actually made with the devil, and that is a sin that affects the death of the soul, according to the laws of theology, and ought to affect the death of the body, according to civil and political laws. The tacit invocation of demons is then only, when a man busies himself so far with such persons, that it is meet and just that the devil should be permitted to have to do with him, though it was opposite to the intention of the man.

But then this express invocation is again subdivided into several species, according to the divers manners by which the devil instructs these men.

The first is enchantment, which I need not describe, and of which I will speak no more, because it is what everybody knows to be detestable, and nobody ought to know the art thereof.

The second is divination by dreams, when any instructions are expected from the devil by way of dream, which is a capital crime.

The third is called necromancy, which is, when by the use of blood and writing, or speaking certain verses, the dead seem to rise again, and speak and teach future things. For though the devil cannot recall a soul departed, yet he can, as some have thought, take the shape of the dead corpse, himself actuate it by his subtlety, as if it was informed with a soul. And some affirm, that by the divine permission the devil can do this, and spake so in the case of Samuel and Saul. But divines of a more solid genius attribute that

power only to the Deity, and say, with reason, that it is beyond the devil's capacity. But it is certain this was a divination done in dead animals by the use of their blood, and therefore the word is derived from the Greek νεκρὸν, which signifies dead, and Μαντήα, which signifies divination.

The fourth species is called divination by the Pythians, which was taken from Apollo, the first diviner, as Thomas Aquinas says in his *Secundá Secundæ, Quæst. 95. Art. 3.*

The fifth is called geomancy, which is when the devil teaches anything by certain signs appearing in the earthly bodies, as in wood, iron, or polished stones, beryls, or glass.

The sixth is named hydromancy, as when a demon teaches anything by appearances in the water.

The seventh is styled æromancy; and it is when he informs people of such things by figures in the air.

The eighth is entituled pyromancy; that is, when it instructs people by forms appearing in the fire.

The ninth is termed aruspicy; which is when by signs appearing in the bowels of sacrificed animals the demon predicts at altars.

Thus far as to express divination, or invocation of the devil, which is detestable; and the very consulting of persons that use such unlawful means is, according to the judgment of all casuists, the high road to eternal damnation.

Now as to tacit divination, or invocation of the devil, that is divided into two subaltern kinds. The first kind is, when for the sake of knowing hidden things, they make use of a vain and superstitious disposition existing in things to judge from; which disposition is not of a sufficient virtue to lead them to any real judgment. The second kind of tacit divination is, when that knowledge is sought by the disposition of those things which men effect on purpose and of their own accord, in order to come by and acquire that knowledge.

Both these kinds of tacit divination are again subdivided into several species, as are particularly mentioned by St. Thomas, *Secundá Secundæ, Quæst. 95, Art. 3*; Gregory de Valentine, tom. iii. *Disput. 6. Quæst. 12. Puncto 2*; Toletus, in *Summa. lib. iv. cap. 15*; and Michael Medina, lib. ii. *de Recta in Deum fide: post Sanctum Augustinum. lib. ii. de Doct. Christ. cap. 19. et seq.*

The first of these kinds of tacit divination contains under it the following several species:—

The first species is called Genethliacal, which is when from the movement or situation of the stars, men's nativities are calculated and inquired into so far, as that from such a search they pretend to deduce the knowledge of human effects, and the contingent events that are to attend them. This Thomas Aquinas and Sixtus Quintus condemns; but I shall, with humility and submission to greater judgments, inquire hereafter into their reasons, and give my opinion why I think this no evil art; but I submit my opinion, if, after it is given, it is thought erroneous.

The second is augury, when anything is predicted from the chattering of birds, or the voice of animals, and this may be either lawful or unlawful. If it comes from natural instinct, for brutes having only a sensitive soul, have their organs subject to the disposition of the greater bodies in which they are contained, and principally of all to the celestial bodies, his augury is not amiss. For if when crows are remarked to caw, as the vulgar phrase is, more than ordinary, it is, judging according to the instinct of their nature, if we expect rain, and we may reasonably depend upon it, we shall be right if we foretell rain to be at hand. But sometimes the devils actuate those brute animals to excite vain ideas in men, contrary to what the instinct of their nature compels them to. This is superstitious and unlawful, and forbid in holy writ.

The third is aruspicy, when from the flight of birds, or any other motion of any animals whatsoever, persons pretend to have an insight and a penetrative knowledge into occult and hidden matters.

The fourth consists in omens, when, for example, a man from any words which others may have spoken on purpose, or by accident, pretends to gather a way of looking into and knowing anything of futurity.

The fifth is chiromancy, which consists in making a pretence to the knowledge of future things by the figures and the lines of the hands; and if it be by consulting the shoulder-bones of any beast, it goes by the name of spatulamancy.

As the first kind of divination, by a tacit invocation of the devil is divided into the five species above mentioned; so also is the second kind of tacit divination, or invocation of the devil, divided into two species by St. Thomas of Aquin.

Secunda Secundæ, questione nonagesima quinta articulo tertio, and too tedious to insert here.

Now all these ways are by these divines counted wicked, and I set them down that people may avoid them. For how many gipsies and pretenders to chiromancy have we in London and in the country? How many that are for hydromaney, that pretend in water to show men mighty mysteries? And how many in geomaney, with their beryls and their glasses, that, if they are not under the instigation of the devil, propagate the scandal at least by being cheats, and who ought to be punished to the utmost severity, as our English laws enact? Mr. Campbell, who hates, contemns, and abhors these ways, ought, methinks, to be encouraged by their being restrained; and people of curious tempers, who always receive from him moral and good instructions, which make them happy in the conduct of life, should be animated in a public manner to consult him, in order to divert the curious itch of their humours from consulting such wicked impostors, or diabolical practisers, as too frequently abound in this nation, by reason of the inquisitive vulgar, who are more numerous in our climate, than any I ever read of.

But now to argue the ease of conscience with regard to his particualar practice by way of the second-sight, whether, *in foro conscientiæ*, it is lawful for him to follow it, or others to consult him? The divines above mentioned having never had any notice of that faculty in all likelihood, or if they had, never mentioned it, makes it a point more difficult for me to discuss; but I think they have stated some cases, by the making of which my premises, I can deduce from all the learned men I have above quoted, a conclusion in favour of our Mr. Duncan Campbell, and of those who consult him; but my opinion shall be always corrected by those who are wiser than myself, and to whom I owe entire submission. I take leave to fix these premises from them first, and to form my argument from them afterwards in the following manner:—

First, It is allowed by all these divines, that a knowledge which one may have of future things within the order of nature, is and may be lawful.

Secondly, They imply, that where justice is not violated, it is lawful both to predict and to consult.

Thirdly, Many of them, but particularly Aureolus, puts

this question: Is it lawful to go to one that deals in the black art, to persuade them to cure any innocent body that another necromancer or dealer in the black art may have maliciously afflicted and tormented with pains? And some of these casuists, particularly Aureolus, say, it is lawful on such an occasion to go to such a conjurer, because the end is not conjuration, but freeing a person from it.

But I take leave to dissent from these great men, and think they are in a double mistake; first, in stating the question, and then in making such an answer, provided the question had been stated right.

The question is founded upon this supposition, which is passed by as granted, viz., that one necromancer could release a person bewitched by another, which is absolutely false; for it is against the nature of the devil to be made an instrument to undo his own works of impiety. But admitting and not granting this to be possible, and the question to be rightly stated, why still these casuists are out in their answer. It is lawful, reply they, because the end of going to the conjurers, is not conjuration, but freeing a good person from it; but the end is not the point here to be considered, it is the medium, which is bad, that is to be considered. It is by conjuration, according to their hypothesis, the other conjuration is to be dissolved; and does not the common rule, that a man must not do evil that good may come of it, forbid this practice? And to speak my opinion plainly in that case, the friend that should consult a conjurer for that end, would be only so kind to put his own soul in danger of being guilty of hell torments, to relieve his afflicted friend from some bodily pains, which it would be a virtue in him to suffer with patience and resignation.

Others, almost all divines, indeed, agree, that it is and may be lawful to go to a conjurer that torments another, and give him money not to afflict the patient any longer; because that is only seeing him to desist from acting after his conjuring manner.

These premises thus settled, if we allow the second-sight to be inbred and inbred, and natural and common to some families, which is proved in the book; and if all that Mr. Campbell has predicted in that second-sighted way terminates with moral advice, and the profit of the consulter, and without the violation of justice to others, as the book

shows all throughout; if he can relieve from witchcraft, as it seems oath is to be had he can, which no one that deals in black art can do, why then I need not draw the conclusion, every reader will do it naturally; they will avow all the strictest laws of casuistry and morality to be in favour of **Mr. Campbell and his consulters.**

VERSES

TO MR. CAMPBELL,

ON THE

HISTORY OF HIS LIFE AND ADVENTURES

I COURT no muse amidst the tuneful throng,
 Thy genii, Campbell, shall inspire my song;
 The gentle summons every thought obeys,
 Wakens my soul, and tunes it all to lays.
 Among the thousand wonders thou hast shown,
 I, in a moment, am a poet grown;
 The rising images each other meet;
 Fall into verse, and dance away with feet:
 Now with thy Cupid and thy lamb I rove^a,
 Through ev'ry bloomy mead and fragrant grove.
 A thousand things I can myself divine,
 Thy little genii whispers them to mine;
 Beyond the grave I see thy deathless fame,
 The fair and young all singing Campbell's name;
 And Love himself—for Love and thou art friends,
 He joins the chorus, and his dart defends.
 What noisy talker can thy magic boast?
 Let those dull wretches try who scorn thee most.
 O, sacred silence! let me ever dwell,
 With the sweet muses, in thy lonely cell!
 Or else bind up, in thy eternal chain,
 Scandal and noise, and all that talk in vain.

M. FOWKE.

^a See Mr. Campbell's Life, p. 43.

TO MRS. FOWKE,

OCCASIONED BY THE FOREGOING VERSES.

SWEET nightingale! whose artful numbers show,
Expressive eloquence to silent woe,
Sing on, and in thy sex's power presume,
By praising Campbell, to strike nations dumb.

Whene'er you sing, silent, as he, they'll stand,
Speak by their eyes, grow eloquent by hand:
Tongues are confusion, but as learnt by you,
All but Pythagoras's doctrine's true;
Campbell and he taught silence—had he heard
How much thy lays to silence were preferr'd,
He had recanted from thy powerful song,
And justly wish'd each organ had a tongue.

But could he see, what you, in every line,
Prophetic tell of Campbell's sight divine,
Like Cræsus's sons his loosened nerves must break,
And ask the cause—or make his Campbell speak.

G S

TO MR. CAMPBELL.

MILTON's immortal wish^a you sure must feel,
To point those fates which you to all reveal;

^a To see and tell
Of things invisible to mortal sight,

If second-sight so much alarms mankind,
 What transports must it give to know thy mind?
 Thy book is but the shadow of thy worth,
 Like distant lights, which set some picture forth.
 But if the artist's skill we nearer trace,
 And strictly view each feature of the face,
 We find the charm that animates the whole,
 And leave the body to adore the soul.
 Milton's immortal wish you sure must feel,
 To point those fates which you to all reveal.

I. PHILIPS.

THE PARALLEL

TO MR. CAMPBELL.

As Denham sings, mysterious 'twas, the same
 Should be the prophet's and the poet's name^a;
 But while the sons of genius join to praise,
 What thine presaging dictates to their lays,
 The things they sweetly sing, and you foreshow,
 Open the Sampson riddle to our view;
 Strong are thy prophccies, their numbers sweet,
 And with the lion combs of honey meet.

Late on fantastic cabalistic schemes,
 Of waking whimsies, or of feverish dreams,
 New cobweb threads of poetry were spun,
 In gaudy snares, like flies, were wirlings won,
 Their brains entangled, and our art undone.

Pope, first, descended from a monkish race,
 Cheapens the charms of art, and daubs her face

^a (Vates) See the Progress of Learning.

From Gabalis^b his mushroom fictions rise,
 Lop off his sylphs—and his Belinda^c dies ;
 The attending insects hover in the air,
 No longer than they're present is she fair ;
 Some dart those eyebeams, which the youths beguile,
 And some sit conquering in a dimpling smile.
 Some pinch the tucker, and some smooth the smock.
 Some guard an upper, some a lower lock ;
 But if these truant body-guards escape,
 In whip the gnomes and strait commit a rape ;
 The curling honours of her head they seize,
 Hairs less in sight, or any hairs they please ;
 But if to angry frowns her brow she bends,
 Upon her front some sullen gnome descends,
 Whisks through the furrows with its airy form,
 Bristles her eyebrows and 'directs the storm.'

As wide from these are Addisonian themes,
 As angels' thoughts are from distempered dreams ;
 Spenser and he, to image nature, knew,
 Like living persons, vice and virtue drew :
 At once instructed and well pleas'd we read,
 While in sweet morals these two poets lead,
 No less to wisdom than to wit pretence,
 They led by music, but they led to sense.

But Pope scarce ever force to fancy joins,
 With dancing-master's feet equips his lines,
 Plumes empty fancy, and in tinsel shines.
 Or if by chance his judgment seems to lead,
 Where one poor moral faintly shows its head,
 'Tis like a judge, that reverently drest,
 Peeps through the pageants at a lord may'r's feast :
 By starts he reasons, and seems wise by fits,
 Such wit's call'd wisdom, that has lost its wits.

Unnam'd by me this witling bard had been,
 Had not the writer's caused the reader's sin ;

^b See the History of the Count de Gabalis, from whence he has taken the machinery of his Rape of the Lock.

^c Mrs. F—m—r.

But less by comedies and lewd romances,
 Are ruin'd, less by French lascivious dances,
 Than by such rhymers' masqueraded fancies.

From such the root of superstition grew,
 Whose old charms fertile, daily branch'd in new;
 From such chimeras first inspired, the fair
 The conj'rer's ring approach'd, and Jesuit's chair;
 Throng'd to the doors where magic rogues divin'd,
 And sold out *ignes fatui* to the mind.

Wizards and Jesuits differ but in name,
 Both demon's envoys, and their trade the same;
 Weak wills they lead, and vapour'd minds command,
 And play the game into each others' hand;
 Like spiritual jugglers at the cup and ball,
 Rising by foolish maids, that long to fall.
 Some into love they damn, and some they pray,
 For greensick minds are caught a different way;
 To the same end, tho' several paths, they run,
 Priests to undo and maids to be undone;
 Some blacker charms, some whiter spells cajole,
 As some lick wall and some devour a coal.
 Here ladies, strong in vapours, see men's faces
 Imprinted in the conjurer's dazzling glasses,
 There, when, in spring time, the too praying priest,
 Toasts, and does something better,—to the best
 A spouse is promised on next Baptist's^d feast.
 First some young contrite rake's enjoined to marry,
 Lest—madam's forc'd to squeak for't—or, miscarry:
 In June, the lass does to the fields repair,
 Where good sir Domine just took the air.
 When, O strange wonder! near a plaintain root,
 She finds a coal—and so a spouse to boot.
 She longs to dream and to secure the sport
 That very day the youth design'd—must court,
 He does—she struck with rapture and delight.
 Bespeaks her fancy—strongly—dreams at night.
 The yielding fair, the ravish'd youth obtains,
 A maid she passes—so his child's free gains,
 He has the pleasure, yet is sav'd the pains.

^d See the Dedication of Mr. Campbell's Life.

Thus when priest's wench—to cure the growing evil
 Poor St. John Baptist must forerun the devil.

But if the ladies fall, at fall of leaf,
 Or in the winter—still there's fresh relief;
 Let her lace close four months, and if she can,
 St. Agnes^e heals the breach and brings the man.
 Thus a lewd priest to vapour'd virgins eants,
 And into pimps reverts his vestal saints.

O! dire effects of mask'd impiety!
 And shall they, Christian muse! have aids from thee;
 Wilt thou, like witty heathens, lewdly given,
 To a Gehenna metamorphose Heaven?
 Wilt thou?—O no—forbid th' unhallow'd song,
 Such profanations to Rome's bard belong.
 Let one, who gods and goddesses adores,
 Paint them like rakes and bullies, bawds, and whores.

Our genii, Campbell, shall be all divine,
 Shall high o'er theirs as much distinguish'd shine,
 As o'er such priests or chiromaneers, thine.
 Thine, which does future time's events command
 To leap to sight, and in thy presenee stand;
 Thine, whose eyes glowing with a gifted ray,
 New roads of life o'er wisdom's Alps survey,
 And guide benighted travellers to day.
 Let me, for once, a daring prophet be,
 Mark from this hour—and poetry thoul't see
 Date a new era from thy book and thee;
 Thy book, where, thro' the stories, thou hast laid,
 All moral wisdom's to the mind convey'd;
 And thus far prophecies each page, that all
 Must rise by virtues, or by vices fall.

Poets shall blush to see their wit outdone,
 Resume their reason and assert its throne,
 Shall fables still for virtue's sake commend;
 And wit the means, shall wisdom make its end.

• See Mr. Campbell's Dedication.

Who hopes to please, shall strive to please by pains,
 Shall gaining fame, earn hard whate'er he gains
 And Denham's morals join to Denham's strains.
 Here paint the Thames^f 'when running to the sea
 Like mortal life to meet eternity.'
 There show both kings and subjects 'one excess,
 Makes both, by striving, to be greater, less.'
 Shall climb and sweat, and falling, climb up still,
 Before he gains the height of Cooper's Hill.

In Windsor Forest, if some trifling grace
 Gives, at first blush, the whole a pleasing face,
 'Tis wit, 'tis true; but then 'tis common-place.
 The landscape-writer branches out a wood,
 Then digging hard for't finds a silver flood.
 Here paints the woodcock quiv'ring in the air,
 And there, the bounding stag and quaking hare.
 Describes the pheasant's scarlet-circled eye,
 And next the slaught'ring gun that makes him die.
 From common epithets that fame derives,
 By which his most uncommon merit lives.
 'Tis true! if finest notes alone could show,
 (Tun'd justly high or regularly low,)
 That we should fame to these mere vocals give,
 Pope more, than we can offer, should receive.
 For, when some gliding river is his theme,
 His lines run smoother than the smoothest stream;
 Not so when thro' the trees fierce Boreas blows,
 The period blust'ring with the tempest grows.
 But what fools periods read for periods' sake?
 Such chimes improve not heads, but make 'em ache;
 Tho' strict in cadence on the numbers rub,
 Their frothy substance is whip-syllabub;
 With most seraphic emptiness they roll,
 Sound without sense, and body without soul.

Not such the bards that give you just applause,
 Each, from intrinsic worth, thy praises draws,
 Morals, in ev'ry page, where'er they look,
 They find divinely scatter'd thro' thy book:

^f See Cooper's Hill.

They find thee studious with praiseworthy strife,
 To smooth the future roads of human life,
 To help the weak, and to confirm the strong,
 Make our griefs vanish, and our bliss prolong,
 With Phineus' equal find thy large desert,
 And in thy praise would equal Milton's art.

Some fools, we know, in spite of nature born,
 Would make thee theirs, as they are mankind's scorn,
 For still 'tis one of truth's unerring rules,
 No sage can rise without a host of fools.
 Coxcombs, by whose eternal din o'ercome,
 The wise in just revenge, might wish them dumb,
 Say on the world your dumbness you impose,
 And give you organs they deserve to lose.
 Impose, indeed, on all the world you would,
 If you but held your tongue, because you could;
 'Tis hard to say, if keeping silence still,
 In one, who, could he speak, would speak with skill,
 Is worse, or talk in these, who talk so ill.
 Why on that tongue should purposed silence dwell,
 Whence every word would drop an oracle?
 More fools of thy known foresight make a jest,
 For all hate greatest gifts who share the least,
 (As Pope calls Dryden the often to the test^g)
 Such from thy pen, should Irwin's sentence^h wait,
 And at the gallows own the judge of fate.
 Or, while with feeble impotence they rail,
 Write wonders on, and with the wise prevail.

Sooner shall Denham cease to be renown'd,
 Or Pope for Denham's sense quit empty sound,
 To Addison's immortal heights shall rise,
 Or the dwarf reach him in his native skies.
 Sooner shall real gipsies grow most fair,
 Or false ones mighty truths like thine declare,
 Than these poor scandal-mongers hit their aim,
 And blemish thine or Curll's acknowledg'd fame.

^g See many places of his notes on Homer.

^h See Mr. Campbell's Life, page 80.

Great Nostradamus thus, his age advis'd,
 The mob his counsels jeer'd, some bards ⁱ despis'd
 Him still, neglecting these his genius fir'd,
 A king encourag'd, and the world admir'd;
 Greater (as times great tide increas'd) he grew,
 When distant ages proved what truths he knew;
 Thy nobler book a greater king received,
 Whence I predict, and claim to be believ'd,
 That by posterity, less fame shall be
 To Nostradamus granted, than to thee;
 Thee! whom the best of Kings does so defend,
 And (myself barring) the best bards commend.

H. STANHOPE.

Whitehall,
 June 6th, 1720.

ⁱ Alluding to this verse, "sed cum falsa Damus, nil nisi Nostra Damus."

THE END OF DUNCAN CAMPBELL.

A NEW
V O Y A G E

ROUND THE
W O R L D ,

BY A

COURSE never sailed before.

BEING

A VOYAGE undertaken by some MERCHANTS, who afterwards proposed the Setting up an *East-India* Company in FLANDERS.

L O N D O N :

Printed for A. BETTESWORTH, at the *Red-Lyon*, in *Pater-Noster-Row*; and W. MEARS, at the *Lamb*, without *Temple-Bar*. M.DCC.XXV.

NEW VOYAGE

ROUND THE WORLD.

It has for some ages been thought so wonderful a thing to sail the tour or eircle of the globe, that when a man has done this mighty feat, he presently thinks it deserves to be recorded like Sir Francis Drake's. So soon as men have acted the sailor, they come ashore and write books of their voyage, not only to make a great noise of what they have done themselves, but pretending to show the way to others to come after them, they set up for teachers and chart makers to posterity. Though most of them have had this misfortune, that whatever success they have had in the voyage, they have had very little in the relation; except it be to tell us, that a seaman when he comes to the press, is pretty much out of his element, and a very good sailor may make but a very indifferent author.

I do not in this, lessen the merit of those gentlemen who have made such a long voyage as that round the globe; but I must be allowed to say, as the way is now a common road, the reason of it thoroughly known, and the occasion of it more frequent than in former times, so the world has done wondering at it; we no more look upon it as a mighty thing, a strange and never heard of undertaking; this cannot be now expected of us, the thing is made familiar, every ordinary sailor is able to do it, if his merchants are but qualified to furnish him for so long a voyage; and he that can carry a ship to Lisbon, may with the same ease carry it round the world.

Some tell us, it is enough to wonder at a thing nine days, one would reasonably then conclude, that it is enough that sailing round the world has been wondered at above a hundred years. I shall therefore let the reader know, that it is not the rarity of going round the world that has occasioned

this publication, but if some incidents have happened in such a voyage, as either have not happened to others, or as no other people, though performing the same voyage have taken notice of, then this account may be worth publishing, though the thing, viz. The Voyage round the World, be in itself of no value.

It is to be observed, of the several navigators whose Voyages round the World have been published, that few, if any of them, have diverted us with that variety which a circle of that length must needs offer. We have a very little account of their landings, their diversions, the accidents which happened to them, or to others by their means; the stories of their engagements, when they have had any scuffle either with natives, or European enemies, are told superficially and by halves; the storms and difficulties at sea or on shore, have nowhere a full relation; and all the rest of their accounts are generally filled up with directions for sailors coming that way, the bearings of the land, the depth of the channels, entrances, and bars, at the several ports, anchorage in the bays, and creeks, and the like things, useful indeed for seamen going thither again, and how few are they? but not at all to the purpose when we come expecting to find the history of the voyage.

Another sort of these writers have just given us their long journals, tedious accounts of their log-work, how many leagues they sailed every day; where they had the winds, when it blew hard, and when softly; what latitude in every observation, what meridian distance, and what variation of the compass. Such is the account of Sir John Narborough's Voyage to the South Seas, adorned with I know not how many charts of the famous Strait of Magellan, a place only now famous for showing the ignorance of Sir John Narborough, and a great many wise gentlemen before him, and for being a passage they had no need to have troubled themselves with, and which nobody will ever go through any more.

Such also are the Voyages of Captain John Wood, to Nova Zemla, at the charge of the public, in King Charles the Second's time, and Martin Forbisher to the North-West Passages, in Queen Elizabeth's time; all which, are indeed full of their own journals, and the incidents of sailing, but have little or nothing of story in them, for the use of such readers who never intend to go to sea, and yet such readers

may desire to hear how it has fared with those that have, and how affairs stand in those remote parts of the world.

For these reasons, when first I set out upon a cruising and trading voyage to the East, and resolved to go anywhere, and everywhere that the advantage of trade or the hopes of purchase should guide us, I also resolved to take such exact notice of everything that past within my reach, that I would be able, if I lived to come home, to give an account of my voyage, differing from all that I had ever seen before, in the nature of the observations, as well as the manner of relating them. And as this is perfectly new in its form, so I cannot doubt but it will be agreeable in the particulars, seeing either no voyage ever made before, had such variety of incidents happening in it, so useful and so diverting, or no person that sailed on those voyages, has thought fit to publish them after this manner.

HAVING been fitted out in the river of Thames so lately as the year 1713, and on a design perhaps not very consistent with the measures taking at that time for the putting an end to the war, I must be allowed to own I was at first obliged to act not in my own name, but to put in a French commander into the ship, for the reasons which follow, and which those, who understand the manner of trade upon closing the late war, I mean the trade with Spain, will easily allow to be just and well grounded.

During the late war between Great Britain and her confederates on one side, and the united crowns of France and Spain on the other, we all know the French had a free trade into the South Seas; a trade carried on with the greatest advantage, and to the greatest degree, that any particular commerce has been carried on in the world for many ages past; insomuch, that we found the return of silver that came back to France by those ships, was not only the enriching of the merchants of St. Malo, Rochelle, and other ports in France, some of whom we saw get immense estates in a few years, even to a million sterling a man; but it was evident, the King of France himself was enabled, by the circulation of so much bullion through his mints, to carry on that war with very great advantage.

It was just at the close of this war, when some merchants of London, looking with envy on the success of that trade,

and how the French, notwithstanding the peace, would apparently carry it on, for some years at least, to infinite advantage, began to consider whether it might not be possible to come in for a portion of it with France, as they were allied to Spain, and yet go abroad in the nature of a private cruiser.

To bring this to pass, it was thought proper, in the first place, to get a share if possible, in a new design of an East India trade in Flanders, just then intended to be set up by some British merchants, by the assistance of an imperial charter, or at least under colour of it: and so we might go to sea in a threefold capacity, to be made use of as occasion might present, viz., when on the coast of New Spain we sought to trade, we were Frenchmen, had a French captain, and a sufficient number of French seamen, and Flemish or Walloon seamen, who spoke French, so to appear on all proper occasions. When at sea we met with any Spanish ship worth our while, we were English cruisers, had letters of mart from England, had no account of the peace, and were fitted for the attack. And when in the East Indies we had occasion to trade, either at the English or Dutch settlements, we should have imperial colours, and two Flemish merchants, at least in appearance, to transact everything as we found occasion. However, this last part of our project failed us, that affair not being fully ripe.

As this mysterious equipment may be liable to some exceptions, and perhaps to some inquiries, I shall for the present conceal my name, and that of the ship also. By inquiries, I mean inquiries of private persons concerned; for, as to public inquiries, we have no uneasiness, having acted nothing in contradiction to the rules and laws of our country; but I say, as to private persons, it is thought fit to prevent their inquiries, to which end, the captain, in whose name I write this, gives me leave to make use of his name, and conceal my own.

The ship sailed from the river the 20th of December, 1713, and went directly over to the coast of Flanders, lying at an anchor in Newport Pitts, as they are called, where we took in our French Captain Jean Michael Merlotte, who, with thirty-two French seamen, came on board us in a large snow from Dunkirk, bringing with them one hundred and twenty-two small ankers or rundlets of brandy, and some hampers and casks of French wine in wickered bottles.

While we were here, we lay under English colours, with pendants flying, our ship being upwards of five hundred ton, and had forty-six guns mounted, manned with three hundred and fifty-six men; we took the more men on board, because we resolved, as occasion should present, to fit ourselves with another ship, which we did not question we should meet with in the South Seas.

We had also a third design in our voyage, though it may be esteemed an accident to the rest, viz., we were resolved to make some attempts for new discoveries, as opportunity offered; and we had two persons on board who were exceeding well qualified for our direction in this part, all which was derived from the following occasion.

The person who was principally concerned in the adventure was a man not only of great wealth, but of great importance; he was particularly addicted to what we call new discoveries, and it was indeed upon his genius to such things, that the first thought of the voyage was founded. This gentleman told me, that he had already sent one ship fully equipped and furnished for a new attempt upon the North-West or North-East passages, which had been so often in vain tried by former navigators; and that he did not question the success, because he had directed them by new measures, and to steer a course that was never attempted yet; and his design in our voyage was to make like discoveries towards the South pole; where, as he said, and gave us very good reasons for it, he did not doubt but we might discover, even to the pole itself, and find out new worlds and new seas, which had never been heard of before.

With these designs, this gentleman came into the other part of our project, and contributed the more largely, and with the more freedom, to the whole, upon that account; in particular, all the needful preparations for such discoveries were made wholly at his expense, which I take notice of here, as being most proper in the beginning of our story, and that the reader may the less wonder at the particular way we took to perform a voyage which might with much more ease have been done by the usual and ordinary way.

We sailed from the coast of Flanders the 2nd of January, and, without any extraordinary incident, made the coast of Galway, in Ireland, the 10th, where we stayed, and took in

a very extraordinary store of provisions, three times as much as usual, the beef being also well pickled or double packed, that we might have a sufficient reserve for the length of our voyage, resolving also to spare it as much as possible.

We had a very rich cargo on board, consisting of all sorts of British manufactures suitable for the Spanish trade in their West Indies; and, as we aimed at nothing of trade till we came to the Spanish coast, we sailed directly for the Canary Islands: having not fully resolved whether we would make our voyage to the South Seas first, and so round the globe by the East Indies, as has been the usual way, or whether we would go first by the East Indies, and upon the discoveries we were directed to, and then cross the great Pacific Ocean to the west coast of America, as was at last resolved.

We made the Canaries, the 11th of February; and, coming to an anchor there to take in some fresh water, we put out French colours, and sent our boat on shore, with a French boatswain and all French seamen, to buy what we wanted: they brought us on board five butts or pipes of wine, and some provisions, and having filled our water, we set sail again the 13th. In this time we called a council among ourselves, by which way we should go.

I confess I was for going by the Cape of Good Hope first, and so to the East Indies: then, keeping to the south of Java, go away to the Moluccas, where I made no doubt to make some purchase among the Dutch Spice Islands, and so away to the Philippines; but the whole ship's company, I mean of officers, were against me in this scheme, although I told them plainly, that the discoveries which would be made in such a voyage as that, were the principal reasons why our chief owner embarked in the adventure, and that we ought to regard the end and design of our voyage; that it would certainly in the conclusion amount to the same, as to trade, as if we went the usual way, seeing the places we were to go to were the same one way as the other, and it was only putting the question which we should go to first; that all the navigators, on such voyages as these, went by the South Seas first, which would be no honour to us at all: but, if we went by the East Indies first, we should be the first that ever went such a voyage, and that we might make

many useful discoveries and experiments in trying that course ; that it would be worth our while, not only to go that way, but to have all the world take notice of it, and of us for it.

I used a great many arguments of the like nature, but they answered me most effectually, with laying before me the difficulties of the voyage, and the contrary methods of trade, which, in a word, made the going that way impracticable : First, the difficulty of the voyage, over the vast ocean called the Pacific Sea, or South Sea, which, if we kept a southern latitude, and took the variable winds, as we should find them, as I proposed to do, might very well be a voyage of six or eight months, without any sight of land, or supply of provisions or water, which was intolerable ; that, as to trade, it was preposterous, and just setting the voyage with the bottom upward ; for as we were loaden with goods, and had no money, our first business, they said, was to go to the South Seas, where our goods were wanted, and would sell for money, and then to the East Indies, where our money would be wanting, to buy other goods to carry home, and not to go to the East Indies first, where our goods would not sell, and where we could buy no other for want of money.

This was seemingly so strong a way of reasoning, that they were all against me, as well French as English, and even the two agents for discoveries submitted to it ; and so we resolved to stand away from the Canaries to the coast of Brazil, thence upon the eastern coast of South America to Cape Horn, and then into the South Seas ; and, if we met with anything that was Spanish by the way, we resolved to make prize of it, as in a time of war.

Accordingly, we made the coast of Brazil in twenty-six days, from the Canary Islands, and went on shore at Cape St. Augustine, for fresh water ; afterwards we put into the bay of All Saints, got some fresh provisions there, and about an hundred very good hogs, some of which we killed and pickled, and carried the rest on board alive, having taken on board a great quantity of roots and maize, or Indian corn, for their food, which they thrived on very well.

It was the last of March when we came to the bay, and having stayed there fourteen days, to furnish ourselves with all things we wanted, we got intelligence there, that there were three ships at Buenos Ayres, in the river Rio de la Plata, which were preparing to go for Europe, and that they

expected two Spanish men of war to be their convoy, because of the Portuguese men of war which were in Brazil, to convoy the Brazil fleet.

Their having two Spanish men of war with them for their convoy, took away a great deal from the joy we had entertained at the news of their being there, and we began to think we should make little or nothing of it; however, we resolved to see the utmost of it, and, particularly, if our double appearance would not now stand us in some stead.

Accordingly, we went away for the river of Plata, and, as usual, spreading French colours, we went boldly up to Buenos Ayres, and sent in our boat, manned with Frenchmen, pretending to be homeward bound from the South Seas, and in want of provisions.

The Spaniards received us with civility, and granted us such provisions as we wanted; and here we found, to our great satisfaction, that there was no such thing as any Spanish man of war there; but they said they expected one, and the governor there for the King of Spain asked our French officer if we would take one of their ships under our convoy? Monsieur Merlotte answered him warily, that his ship was deep loaden, and foul, and he could not undertake anything; but, if they would keep him company, he would do them what service he could; but that also, as they were a rich ship, they did not design to go directly to France, but to Martinico, where they expected to meet with some French men of war to convoy them home.

This answer was so well managed, though there was not one word of truth in it, that one of the three ships, for the other two were not ready, resolved to come away with us, and, in an evil hour for them, they did so.

To be brief, we took the innocent Spaniard into our convoy, and sailed away to the northward with them, but were not far at sea before we let them know what circumstances they were in, by the following method. We were about half a league a head of them, when our captain bringing to, and hauling up our courses, made a signal to the Spaniards for the captain to come on board, which he very readily did; as soon as he was on board, our captain let him know that he was our prisoner, and all his men, and immediately manning their boat with thirty of our men, we sent them on board their ship, to take possession of her, but ordered them that

they should behave civilly to the men on board, and plunder nothing. For we made a promise to the Spanish captain, that his ship should not be plundered, upon condition he would give us a just account of his loading, and deliver peaceably to us what riches he had on board; then we also agreed, that we would restore him his ship, which by the way, we found was chiefly loaden with hides, things of no value to us, and that the ship also was an old vessel, strong, but often doubled, and therefore a very heavy sailer, and consequently not at all fit for our purpose, though we greatly wanted a ship to take along with us, we having, as I have said, both too many men, and being too full of goods.

The Spanish captain, though surprised with the stratagem that had brought him thus into the hands of his enemies, and greatly enraged in his mind at being circumvented, and trepanned out of his ship, yet showed a great presence of mind under his misfortune; and, as I verily believe, he would have fought us very bravely, if we had let him know fairly what we were, so he did not at all appear dejected at his disaster, but capitulated with us as if he had been taken sword in hand. And one time, when Captain Merlotte and he could not agree, and the Spanish captain was a little threatened, he grew warm; told the captain that he might be ill used, being in his hands, but that he was not afraid to suffer whatever his ill fortune had prepared for him, and he would not, for fear of ill usage, yield to base conditions; that he was a man of honour, and if he was so too, he demanded to be put on board his own ship again, and he should see he knew how to behave himself. Captain Merlotte smiled at that, and told him, he was not afraid to put him on board his own ship, and fight for her again, and that, if he did so, he was sure he could not escape him; the Spanish captain smiled too, and told him he should see, if he did, that he knew the way to heaven from the bottom of the sea as well as any other road, and that men of courage were never at a loss to conquer their enemy one way or other; intimating, that he would sink by his side rather than be taken, and that he would take care to be but a very indifferent prize to him, if he was conquered.

However, we came to better terms with him afterwards. In short, having taken on board all the silver, which was about two hundred thousand pieces of eight, and whatever

else we met with that was valuable, among the rest his ammunition, and six brass guns, we performed conditions, and sent him into the Rio de la Plata again with his ship, to let the other Spanish captains know what scouring they had escaped.

Though we got a good booty, we were disappointed of a ship; however, we were not so sensible of that disappointment now, as we were afterwards: for, as we depended upon going to the South Seas, we made no doubt of meeting with vessels enough for our purpose. Of what followed, the reader will soon be informed.

We had done our work here, and had neither any occasion or any desire to lie any longer on this coast, where the climate was bad, and the weather exceeding hot, and where our men began to be very uneasy, being crowded together so close all in one ship; so we made the best of our way south.

We met with some stormy weather in these seas, and particularly a north-west blast, which carried us for eleven days a great way off to sea; but, as we had sea-room enough, and a stout strong-built ship under us, perfectly well prepared, tight and firm, we made light of the storms we met with, and soon came into our right way again; so that, about the 4th of May, we made land in the latitude of $45^{\circ} 12'$, south.

We put in here for fresh water; and, finding nothing of the land marked in our charts, we had no knowledge of the place, but, coming to an anchor at about a league from the shore, our boat went in quest of a good watering-place; in pursuit of this, they went up a creek about two leagues more, where they found good water, and filled some casks, and so came on board to make their report.

The next day we came into the creek's mouth, where we found six to eight fathom water within a cable's length of the shore, and found fresh water enough, but no people or cattle, though an excellent country for both.

Of this country I made many observations, suitable to the design and desire of our ingenious employer and owner; and those observations are one end of publishing this voyage. I shall mention only one observation here, because I shall have occasion to speak of them hereafter more largely. My observation here is as follows:—

An observation concerning the soil and climate of the continent of America, south of the river De la Plata; and how suitable to the genius, the constitution, and the manner of living of Englishmen, and consequently for an English colony.

The particular spot which I observe upon, is that part of the continent of America which lies on the shore of the North Seas, as they are called, though erroneously, for they are more properly the East Seas, being extended along the east shores of South America. The land lies on the same east side of America, extended north and south from Coasta Deserta, in 42° , to Port St. Julian, in $49\frac{1}{2}^{\circ}$, being almost five hundred miles in length, full of very good harbours, and some navigable rivers. The land is a plain for several scores of miles within the shore, with several little rising hills, but nowhere mountainous or stony; well adapted for enclosing, feeding, and grazing of cattle; also for corn, all sorts of which would certainly not only grow, but thrive very well here, especially wheat, rye, pease, and barley, things which would soon be improved by Englishmen, to the making the country rich and populous, the raising great quantities of grain of all sorts, and cattle in proportion. The trade which I propose for the consumption of all the produce, and the place whither to be carried, I refer to speak of by itself, in the farther progress of this work.

I return now to the pursuit of our voyage. We put to sea again the 10th of May, with fair weather and a fair wind; though a season of the year, it is true, when we might have reason to expect some storms, being what we might call the depth of their winter. However, the winds held northerly, which, there, are to be esteemed the warm winds, and bringing mild weather; and so they did, till we came into the latitude of 50° , when we had strong winds and squally weather, with much snow and cold, from the south-west and south-west by west, which, blowing very hard, we put back to Port St. Julian, where we were not able to stir for some time.

We weighed again the 29th, and stood south again past the mouth of the Straits of Magellan, a strait famous for many years, for being thought to be the only passage out of

the North Seas into the South Seas, and therefore I say famous some ages; not only in the discovery of it by Magellan, a Spanish captain, but of such significance, that, for many years, it was counted a great exploit to pass this strait, and few have ever done it of our nation, but that they have thought fit to tell the world of it as an extraordinary business, fit to be made public as an honour to their names. Nay, King Charles the Second thought it worth while to send Sir John Narborough, on purpose to pass and take an exact survey of this strait; and the map or plan of it has been published by Sir John himself, at the public expense, as a useful thing.

Such a mighty and valuable thing also was the passing this strait, that Sir Francis Drake's going through it gave birth to that famous old wives' saying, viz., that Sir Francis Drake shot the gulf; a saying that was current in England for many years after Sir Francis Drake was gone his long journey of all; as if there had been but one gulf in the world, and that passing it had been a wonder next to that of Hercules cleansing the Augean stable.

Of this famous place I could not but observe, on this occasion, that, as ignorance gave it its first fame and made it for so many ages the most eminent part of the globe, as it was the only passage by which the whole world could be surrounded, and that it was to every man's honour that had passed it; so now it is come to the full end or period of its fame, and will in all probability never have the honour to have any ship, vessel, or boat, go through it more, while the world remains, unless, which is very improbable, that part of the world should come to be fully inhabited.

I know some are of opinion, that, before the full period of the earth's existence, all the remotest and most barren parts of it shall be peopled; but I see no ground for such a notion, but many reasons which would make it appear to be impracticable, and indeed impossible; unless it should please God to alter the situation of the globe as it respects the sun, and place it in a direct, as it now moves in an oblique position; or that a new species of mankind should be produced, who might be as well qualified to live in the frozen zone as we are in the temperate, and upon whom the extremity of cold could have no power. I say, as there

are several parts of the globe where this would be impracticable, I shall say no more than this, that I think it is a groundless suggestion.

But to return to our voyage; we passed by the mouth of this famous Strait of Magellan, and those others which were passed through by Le Maire the Dutch sailor afterwards; and keeping an offing of six or seven leagues, went away south, till we came into the latitude of 58° , when we would, as we had tried three days before, have stretched away south-west, to have got into the South Seas, but a strong gale of wind took us at west-north-west, and though we could, lying near to it, stretch away to the southward, yet, as it overblowed, we could make no westward way; and though we had under us an excellent strong-built vessel, that, we may say, valued not the waves, and made very good work of it, yet we went away to leeward in spite of all we could do, and lost ground apace. We held it out, however, the weather being clear, but excessive cold, till we found ourselves in the latitude of 64° .

We called our council several times, to consider what we should do, for we did but drive to leeward the longer we strove with it; the gale held still on, and, to our apprehensions, it was set in; blowing like a kind of monsoon, or trade-wind, though in those latitudes I know there is no such thing properly called, as a trade-wind.

We tried, the wind abating, to beat up again to the north, and we did so; but it was by running a great way to the east; and once, I believe, we were in the longitude of St. Helena, though so far south, but it cost us infinite labour, and near six weeks' time. At length we made the coast, and arrived again at the Port of St. Julian the 20th of June, which, by the way, is the depth of their winter.

Here we resolved to lay up for the winter, and not attempt to go so far south again at that time of the year, but our eager desire of pursuing our voyage prevailed, and we put out to sea again, having taken in fresh provisions, such as are to be had there; that is to say, seals, penguins, and such like, and with this recruit we put to sea, I say, a second time.

We had this time worse luck than we had before; for, the wind setting in at south-west, blew a storm, and drove us with such force away to sea eastward, that we were

never able to make any way to the southward at all, but were carried away with a continued storm of wind, from the same corner, or near it. Our pilot, or master, as we called him, finding himself often obliged to go away before it, which kept us out long at sea, and drove us far to the north-east, eastward, that he advised us to stand away for the Cape of Good Hope; and accordingly we did so, and arrived there the last day of July.

We were now disheartened indeed, and I began to revive my proposal of going to the East Indies, as I at first proposed; and to answer the objection which they then made against it, as being against the nature of trade, and that we had nothing on board but European goods, which were not fitted for the East Indies, where money only was suitable to the market we were to make; I say, to answer this objection, I told them I would engage that I would sell our whole cargo at the Philippine Islands as well as on the coast of America; for that those islands being Spanish, our disguise of being French would serve us as well at the Philippines, as it would in New Spain; and with this particular advantage, that we should sell here for four times the value we should on the coast of Chili, or Peru; and that, when we had done, we could load our ship again there, or in other places in the Indies, with such goods as would come to a good market again in New Spain.

This I told them was indeed what had not been practised, nor at any other time would it be practicable: for as it was not usual for any ships to go from the East Indies to the Philippines, so neither was it usual for any European ships to trade with freedom in the South Seas, till, since the late war, when the French had the privilege; and I could not but be amazed that the French had never gone this way, where they might have made three or four voyages in one, and with much less hazard of meeting with the English or Dutch cruisers; and have made twice the profits which they made the other way, where they were frequently out three or four years upon one return; whereas here they might make no less than three returns, or perhaps four, in the same voyage and in much less time.

They were now a little surprised, for in all our first debates we had nothing of this matter brought in question; only they entertained a notion that I was going upon strange

projects to make discoveries, search for the South pole, plant new colonies, and I know not how many whims of their own, which were neither in my design, or in my instructions. The person, therefore, who was our supercargo, and the other captain, whose name I have not mentioned, together with the French Captain, Merlotte, and the rest, who had all opposed me before, came cheerfully into my proposal; only the supercargo told me, in the name of the rest, that he began to be more sensible of the advantages of the voyage I had proposed, than he was before; but that, as he was equally intrusted with me in the government of the trading part, he begged I would not take it ill, that he desired I would let him farther into that particular, and explain myself, at least as far as I thought proper.

This was so just a request, and so easy for me to do, and, above all, was made with so much good manners and courtesy, that I told him, if I had been otherwise determined, the courteous and good-humoured way with which he required it, would constrain me to it; but that, however, I was very ready to do it, as he was intrusted with the cargo jointly with me, and that it was a piece of justice to the owners, that whom they thought fit to trust I should trust also; upon this I told him my scheme, which was as follows:

First, I said, that, as the Philippine Islands received all their European goods from Acapulco, in America, by the king of Spain's ships, they were obliged to give what price was imposed upon them by the merchants, who brought those goods by so many stages to Acapulco. For example, the European goods, or suppose English goods in particular, with which they were loaden, went first from England to Cadiz, from Cadiz by the galleons to Porto Bello, from Porto Bello, to Panama, from Panama to Acapulco; in all which places the merchants had their several commissions and other profits upon the sale; besides the extravagant charges of so many several ways of carriage, some by water, some by land, and besides the king's customs in all those places; and that, after all this, they were brought by sea from Acapulco to the Philippine Islands, which was a prodigious voyage, and were then generally sold in the Philippine Islands at three hundred per cent. advance.

That, in the room of all this, our cargo being well bought and well sorted, would come to the Philippine Islands at

once, without any landing or re-landing, and without any of all the additions of charge to the first cost, as those by the way of New Spain had upon them; so that, if we were to sell them at the Philippine Islands a hundred per cent. cheaper than the Spaniards usually sold, yet we should get abundantly more than we could on the coast of Peru, though we had been allowed a free trade there.

That there were but two objections to this advantage, and these were, our liberty of trading, and whether the place would consume the quantity of goods we had; and to this I had much to answer. First, that it was well known at the Philippine Isles, that the kings of France and Spain were united firmly together; that the king of Spain had allowed the king of France's subjects a free trade in his American dominions, and consequently, that it would not be denied there; but, on the other hand, that, if it was denied by the governor, yet there would be room to find out a trade with the inhabitants, and especially with the Chinese and Japan merchants, who were always there, which trade the governor could not prevent; and thus we could not fear a market for all our cargo, if it was much greater than it was.

That as to the returns, we had the advantage either way: for, first, we should be sure to receive a great part of the price of our goods in Chinese or Japan gold and silver, or in pieces of eight; or, if we thought fit to trade another way, we might take on board such a quantity of China damasks, and other wrought silks, muslins and chintz, China ware, and Japan ware; all which, would be immediately sold in America; that we should carry a cargo of these goods to New Spain, infinitely to our advantage, being the same cargo which the four great Acapulco ships carry back with them every year: That when we had gone to the South Seas with this cargo, of which we knew we should make a good market, we had nothing to do but to come back, if we thought fit, to the East Indies again, where we might load for England or Flanders such goods as we thought proper; or, if we did not think fit to take so great a run, we might go away to the south, and round by Cape Horn into the Atlantic Ocean, and perfect those discoveries, which we made part of in the beginning of our voyage.

This was so clear a scheme of trade, that he seemed surprised with it, and fully satisfied in every part of it. But

the captain then objected against the length of the voyage to the South Seas from the Philippines, and raised several scruples about the latitude which we should keep in such a voyage; that we should not be able to carry any provisions which we could take on board in those hot countries, that would keep for so long a run, and several other difficulties; to all which I made answer, that when we had sold our cargo at the Philippines, and found our advantages there to answer our desires, I would not oppose our returning from thence directly to England if they found it needful; or, if they thought a farther adventure would not answer the risks we were to expect in it, we would never have any dispute about that.

This satisfied them fully, and they went immediately with the news to the men, as what they thought would please them wonderfully, seeing they were mighty uneasy but two or three days before, about their being to go back again to the south of America, and the latitude of 64° , where we had not only been twice driven back, as if heaven had forbidden us to pass that way, but had been driven so far to the south, that we had met with a most severe cold, and which pinched our men exceedingly, who being come, as we might say, a hot-weather voyage, were but ill furnished for the state of the air usual in the latitudes of 64° .

But we had a harder task to go through than we expected. upon this occasion; and it may stand here upon record, as a buoy or beacon to warn officers and commanders of ships, supercargoes, and such as are trusted in the conduct of the voyage, never to have any disputes among themselves, (I say not among themselves), about the course they shall take, or whither they shall go; for it never fails to come among the men after them, and if the debate is but named on the outside of the great cabin door, it becomes immediately a dispute among the officers upon the quarter-deck, the lieutenants, mates, purser, &c.; from thence it gets afore the mast, and into the cook room, and the whole ship is immediately divided into factions and parties; every foremast man is a captain, or a director to the captain; every boatswain, gunner, carpenter, coxswain, nay, and even the cook, sets up for a leader of the men; and if two of them join parties, it is ten to one but it comes to a mutiny, and perhaps to one of the two last extremities of all mutinies, viz., running

away from the ship, or, what is worse, running away with the ship.

Our case was exactly thus, and had issued accordingly, for aught I know, if we had not been in a port where we got immediate assistance, and that by a more than ordinary vigour in the management too.

I have mentioned the first time when we called a council about our voyage at the Canaries, and how it was carried against my opinion not to go to the East Indies, but to go to the South Seas, about by Cape Horn. As the debate of this was not at all concealed, the officers of the ship, viz., the two lieutenants and two mates, the purser, and others, came in, and went out, and not only heard all we said, but talked of it at liberty on the quarter-deck, and where they pleased, till it went among the whole ship's crew. It is true, there came nothing of all this at that time, because almost all the votes being against my opinion, as I have said already, the ship's company seemed to join in naturally with it, and the men were so talked into the great prospects of gain to themselves, by a voyage to the South Seas, that they looked upon me, who ought to have had the chief direction in the business, to be nobody, and to have only made a ridiculous proposal, tending to hurt them; and I perceived clearly after this, that they looked upon me with an evil eye, as one that was against their interest; nay, and treated me with a sort of contempt too, as one that had no power to hurt them, but as one, that if things were left to me, would carry them on a wildgoosechase they knew not whither.

I took no notice of this at first, knowing that, in the process of things, I should have opportunity enough to let them know I had power to oblige them many ways; as also, that I had authority sufficient to command the whole ship, and that the direction of the voyage was principally in me, though I being willing to do everything in a friendly way, had too easily, and, I may say, too weakly, put that to the vote, which I had a right to have commanded their compliance with. The ill consequences of which appeared not for some time, but broke out upon the occasion of our new measures, as will presently appear.

As soon as we had determined our voyage among ourselves in the great cabin, the supercargo and Captain Merlotte went out upon the quarter-deck, and began to talk of it

among the officers, midshipmen, &c. ; and, to give them their due, they talked of it very honestly ; not with any complaint of being over-ruled, or over-persuaded, but as a measure that was fully agreed to among us in the great cabin.

The boatswain, a blunt, surly, bold fellow, as soon as he heard of it, Very well, says he, so we are all come back into Captain Positive's blind proposal (for so he called me) ; why this is the same that everybody rejected at the Canaries ; and now, because we are driven hither by contrary winds, those winds must be a reason why we must undertake a preposterous, ridiculous voyage, that never any sailor would have proposed, and that man never went before. What, does the captain think that we cannot find our way to the coast of America again, and because we have met with cross winds, we must never meet with fair ones ? I warrant him, let us but go up the height of St. Helena, we will soon reach the Rio de la Plata and Port St. Julian again, and get into the South Seas too, as others have done before us.

The gunner took it from the boatswain, and he talks with one of the midshipmen in the same dialect. For my part, says he, I shipped myself for the South Seas when I first came aboard the ship, and in hopes of good booty ; and if we go thither, I know nothing can hinder us, wind and weather permitting : but this is such a voyage as no man ever attempted before ; and whatever the captain proposes, can have nothing in it for the men, but horrid fatigue, violent heats, sickness, and starving.

One of the mates takes it from him, and he says as openly, I wonder what a plague the rest of the gentlemen mean ; they were all against the captain when he started this whimsical voyage before, and now they come all into it of a sudden, without any consideration ; and so the project of one man must ruin the most promising voyage ever yet undertaken, and be the death of above two hundred as stout fellows as ever were together in one ship in this part of the world.

One of the midshipmen followed the mate, and said, We were all promised that another ship should be gotten, either purchased or taken, and that the first ship we took, should be manned and victualled out of this ship, where we were double manned, and crowded together enough to bring an infection among us, in such hot climates as we are going into ;

and if we were in the South Seas, we should easily buy a ship, or take a ship for our purpose, almost where we would; but in all this part of the world there is no such thing as a ship fit for an Englishman to set his foot in. We were promised, too, that when we got into such a ship, we that entered as midshipmen should be preferred to offices, as we were qualified, and as our merit should recommend us. What they are going to do with us now, I cannot imagine, unless it be to turn us afore the mast, when half the foremast men are dead, and thrown overboard.

The master, or pilot of the ship, heard all these things, and sent us word into the great cabin of all that passed, and, in short, assured us, that, if these things went a little farther, he was afraid they would come up to a mutiny; that there was great danger of it already, and that we ought to apply some immediate remedy to it, or else he thought it would be too late. He told me the particulars also, and how the whole weight of their resentment seemed to tend to quarrelling at my command, as believing that this project of going to the East Indies was wholly mine; and that the rest of the officers being a little influenced by the accident of our being driven so far out of our way, were only biassed in the rest by my opinion; and, as they were all against it before, would have been so still, if it had not been for me; and he feared, if they went on, they might enter into some fatal measures about me, and perhaps resolve to set me on shore in some barren uninhabited land or other, to give me my bellyful of new discoveries, as it seems some of them had hinted, and the second mate in particular.

I was far from being insensible of the danger I was in, and indeed of the danger the whole voyage, ship and all, was in; for I made no question, but that, if their brutish rage led them to one villanous action, they would soon go on to another; and the devil would take hold of that handle to represent the danger of their being punished for it when they came home; and so, as has been often the case, prompt them to mutiny against all command, and run away with the ship.

However, I had presence of mind enough to enter into prompt measures for our general safety, and to prevent the worse, in case of any attempt upon me. First, I represented the case to the rest of the gentlemen, and asked if they would

stand by me, and by the resolutions which we had taken for the voyage ; then I called into our assistance the chief mate, who was a kinsman of one of our owners. a bold resolute gentleman, and a purser, who we knew was faithful to us ; as also the surgeon and the carpenter. I engaged them all to give me first their opinions whether they were convinced of the reasonableness of my scheme for the voyage I had proposed ; and that they might judge for themselves, laid it all before them again, arguing every part of it so clearly to them, that they were convinced entirely of its being the most rational prospect of the voyage for us, of any we could go about.

When I had done this, I recommended it to them to expostulate with the men, and if possible, to keep them in temper, and keep them to their duty ; but at the same time, to stand all ready, and upon a signal which I gave them, to come all to the steerage, and defend the great cabin door with all the other hands, whom they could be sure of ; and in the mean time to be very watchful over the motions of the men, and see what they drove at.

At the same time I fortified myself with the French captain, and the supercargo, and the other captain ; and by the way, all the French captain's men were true to him, and he true to us, to a man. We then brought a sufficient store of ammunition and small arms into the great cabin, and secured the steerage, as also the roundhouse, so that we could not possibly be surprised.

There was nothing done that night, but the next morning I was informed, that the gunner and second mate were in a close cabal together, and one or two of the midshipmen, and that they had sworn to one another, not that they would not go the voyage as was proposed, for that might have ended in their running away, which I should not have been sorry for ; but, in short, their oath was, that the ship should not go the voyage ; by which I was presently to understand, that they had some measures to take to prevent my design of the voyage to the Philippines, and that, perhaps, this was to run away with the ship to Madagascar, which was not far off.

I had, however, this apparent encouragement, that as the contrivance was yet but two days' old, for it was but two days since they had any notice of our intentions to go, they would be some days caballing and forming an interest among the men, to make up a party strong enough to make any

attempt; and that, as I had a trusty set of men, who would be as diligent the other way, they would be contriving every method to get the men over to their opinion, so that at least it would be some time before they could make their party up.

The affair was rightly conjectured, and the three men who had made themselves the head of the mutineers, went on apace, and my men increased too, as much as could be desired for the time; but the Friday after, which was about five days from the first discovery, one of the midshipmen came, and desired to speak with me, and begged it might not, if possible, be known that he was with me. I asked him if he desired to be alone; he said no, I might appoint whom I thought convenient that I could trust, but that what he had to say was of the last importance to all our lives, and that therefore, he hoped I would be very sure of those in whom I confided.

Upon this, I told him, I would name the chief mate, the French captain, and the supercargo, and in the mean time, I bade him not be too much surprised, for that I had already some warning of the scheme which I believed he had to tell me of, and that I was preparing all things to disappoint it: that, however, I should not value his fidelity the less, and that he might speak freely his mind before those men, for they were all in the secret already, and he might be sure both of protection and reward.

Accordingly, I bade him go out upon the quarter-deck, and walk there, and that, when the chief mate went off into the roundhouse, he should go down between decks as if he was going into his cabin to sleep, and that, when he heard the chief mate call the cabin boy, a black of mine, whose name was Spartivento, he should take that for a signal that the steerage was clear, and he might come up, and should be let into the great cabin; all which was so managed, and in so short a time, that he was with us in the great cabin in a quarter of an hour after the first conference, and none of the men perceived it.

Here he let me into the whole secret, and a wicked scheme it was; viz., that the second mate, the gunner, three midshipmen, the cockswain, and about six-and-thirty of the men, had resolved to mutiny, and seize upon all us who were in the new project, as they called it; and to confine us first, then to set us on shore, either there where we were, or some-

where else, and so carry the ship away to the South Seas, and then to do as they found convenient ; that is to say, in a word, to seize upon me, the other eaptain, the French captain, the supercargo, the chief mate, doctor, and carpenter, with some others, and run away with the ship.

He told me, that they had not fully coneluded on all their measures, nor gained so many of the men as they intended ; that they were to sound some more of the men the next morning, and, as soon as they had made their number up fifty, they were resolved to make the attempt, which they did not question would be by Thursday, and this was Monday morning ; and that, if they were then ready, they would make the onset at changing the watch the same evening. He added, that, as they were to go on shore the next morning for fresh water, I should know the truth of it by this ; that the second mate would come to me, and tell me that they wanted more water, and to know if I pleased the boats should go on shore, and that, if I chose it, he would go with them, or any else whom I pleased to appoint ; and that, upon supposition that I would leave it to him, to take those he thought fit to go with him, he would then take occasion to choose the principal conspirators, that they might, when they were on shore, conclude upon the measures they intended to pursue.

I had all that day (Monday) to order my preparations, and upon this plain intelligenee, I determined to lose no time, nor was it long before I resolved what to do ; for as their design was desperate, so I had nothing but desperate remedies to provide. Having therefore settled my measures, I called for the cockswain, and bade him man the pinnaee, for that I was to go on shore, and I appointed only the supercargo, and the surgeon, and the French eaptain, to go with me.

There were no English ships in the road, but there were about five Dutch vessels homeward-bound, waiting for more, and three outward-bound. As I passed by one of the outward-bound East India ships, the French captain, as we had agreed before, pretended to know the ship, and that the commander was his old aequaintance, and asked me to give him leave to visit him, and told me he was sure he would make us all welcome. I seemed unwilling at first, telling

him I intended to go on shore and pay my respects to the governor, and, as was usual, to ask him leave to buy some provisions, and that the governor would take it very ill if I did not go. However, upon his alleging that we would not stay, and that the Dutch captain, upon his going on board, would, he was sure, give us a letter of recommendation to the governor, by which we should have everything granted that we could desire, I consented to his importunity, and we went on board.

Captain Merlotte, who spoke Dutch very well, hailed the ship, asked the captain's name, and then asked if he was on board; they answered, Yes; then he bade them tell him the captain of the English ship was come to visit him; upon which, immediately their chief mate bade them man the side, and stood at the side to receive us, and, before we could get up, the Dutch captain came upon the quarter-deck, and with great civility invited us into his cabin; and, while we were there, the chief mate, by the captain's order, entertained the boat's crew with like civility.

When we were in the cabin, Captain Merlotte told the Dutch captain that we came indeed to him in the form of a visit, but that our business was of the greatest importance, and desired we might speak to him of it in the hearing of none but such as he could trust. The captain told us with the greatest open-heartedness imaginable, that though we were strangers to him, yet we looked like honest men, and he would grant our request; we should speak it in the hearing of none but those we could trust, for there should be nobody by but ourselves.

We made him fully sensible that we knew how obliging that compliment was, but begged he would admit any whom he thought worthy to be trusted with a secret of the last importance. He then carried it as far the other way, and told us, that then he must call in the whole ship's company, for that there was not a man in the ship but he could trust his life in his hands. However, upon the whole, he sent everybody out of the cabin but us three and himself, and then desired we would speak our minds freely.

Captain Merlotte, who spoke Dutch, began, but the Dutch captain interrupted him, and asked if the English captain, meaning me, spoke Dutch; he said no; upon which he asked

Capain Merlotte if he spoke English, and he said yes, upon which he let me know that he understood English, and desired I would speak to him in English.

I was heartily glad of this, and began immediately with the story, for we had time little enough, I told him that he was particularly happy in having it in his power to say he could put his life in the hand of any man, the meanest in his ship; that my men were unhappily the reverse of his; and, then beginning at the first of the story, I gave him a full account of the whole, as related above.

He was extremely affected with it, and asked me what he could do to serve me, and assured me that he would not only do what in him lay, but would engage all the ships in the road to do the like, and the governor also on shore. I thanked him very sincerely, and told him what at present was the circumstance I thought lay before me, was this, viz., that the chief conspirators would be on shore on the morrow, with one, or perhaps two, of our boats, to fetch water and get some fresh provisions, and I should be very glad to have them seized upon by surprise, when they were on shore, and that then I thought I could master the rest on board well enough.

Leave that to me, says he, I will give the governor notice this evening, and as soon as they come on shore they shall be all seized; But, says he, if you think they may incline to make any resistance, I will write a line to the governor, and give it you now; then, when your men go on shore, order two of the principal rogues to go and wait on the governor with the letter from you, and when he receives it, he shall secure them there; so they will be divided, and taken with the more ease.

In the mean time, added he, while this is doing on shore, I will come on board your ship, with my long boat and pinnace, and as many men as you please, to repay you the compliment of this visit, and assist you in reducing the rest.

This was so kind, and so completely what I desired, that I could have asked nothing more; and I accepted his visit in his barge, which I thought would be enough, but was afraid that, if more came, our men might be alarmed, and take arms before I was ready; so we agreed upon that, and, if I desired more help, I should hang out a signal, viz., a red ancient, on the mizen top.

All things being thus consulted, I returned on board, pretending to our men that I had spent so much time on board the Dutch ship, that I could not go on shore; and indeed some of my men were so drunk, that they could scarce sit to their oars; and the coxswain was so very far gone, that I took occasion to ask publicly, to leave him on board till the next day, giving the Dutch captain also a hint that he was in the conspiracy, and I should be glad to leave him on that account.

The next day, about nine o'clock, the second mate came to me, and told me they wanted more water, and, if I pleased to order the boat on shore, he would go if I thought fit, and see if he could get any fresh provisions, the purser being indisposed.

I told him, yes, with all my heart; that the Dutch captain last night had given me a letter to the governor, to desire we might be furnished with whatever we had occasion for, and that I had thoughts of calling for him to go on shore and deliver it, and that, perhaps, the governor might make him some present in compliment to the English nation.

He seemed extremely pleased at this, and even elevated, and going out to give orders about the boat, ordered the long-boat and the shallop, and came in again, and asked me whom I pleased to have go along with him. I answered, smilingly to him, Pick and choose then yourself, only leave the pinnace's crew that went with me yesterday, because they must go on board again to carry the Dutch captain a little present of English beer that I am going to send him, and fetch aboard their drunken coxswain, who was so intoxicated that we were fain to leave him behind us.

This was just what he wanted; and we found he chose all the chief rogues of the conspiracy; such as the boatswain, the gunner, the midshipmen we spoke of, and such of the foremast men as he had secured in his design; and of the rest, we judged they were in the plot, because he took them with him; and thus having the long-boat and the shallop, with about six-and-thirty men with them, away they went to fill water.

When they came on shore, they had presently three Dutchmen, set by the Dutch captain, unperceived by them, to be spies upon them, and to mark exactly what they did; and at the same time found three boats of Dutchmen at the water-

ing-place, (for the captain had procured two boats to go on shore from two other ships,) full of men also, having acquainted them with the design. As soon as our boats came on shore, the men appeared to be all very much engaged in something more than ordinary, and, instead of separating, as it was expected they should, they went all into one boat, and there they were mighty busily engaged in discourse one with another.

The Dutch captain had given the charge of these things to a brisk bold fellow, his mate, and he took the hints the captain gave him so well, that nothing could have been better; for, finding the men thus in a kind of a cabal, he takes four of his men with muskets on their shoulders, like the governor's men, and goes with them to the Englishmen's boat, and asks for their officer, the second mate, who, upon this, appears. He tells them he comes from the governor, to know if they were Englishmen, and what their business was on shore there: the mate answered, they came from on board the English ship, that they were driven there by stress of weather, and hoped they might have leave to fill water and buy necessaries for their money.

He told them he supposed the governor would not refuse them when he knew who they were, but that it was but good manners to ask leave: the Englishman told him, that he had not yet filled any water or bought any provisions, and that he had a letter to the governor from the captain, which he supposed was to pay the usual civilities to him, and to give him the civility of taking leave, as was expected.

The Dutchman answered, that was hael weel; that he might go and carry it, if he pleased, then, and, if the governor gave them leave, all was right and as it should be; but that the men could not be admitted to come on shore till his return.

Upon this, away goes the second mate of our ship and three of the men with him, whereof the gunner was one; for he had asked the Dutchman how many he might carry with him, and he told him three or four: and those he took you may be sure, were of the particular men whom he had a confidence in, because of their conversing together by the way.

When they came to the governor, the mate sent in a message first, viz., that he was come from on board the English

ship in the road, and that he had a letter from the captain to his excellence.

The governor, who had notice given him of the business, sends out word, that the gentlemen should send in the letter, and the governor would give them an answer: in the mean time, there appeared a guard of soldiers at the governor's house, and the four Englishmen were let into the outer room, where the door was shut after them, and the soldiers stood without the door, and more soldiers in another room between them and the parlour which the governor sat in.

After some time, the mate was called in, and the governor told him that he had read the letter which he brought, and asked him if he knew the contents of it; he answered, No: the governor replied, he supposed not, for, if he had, he would scarce have brought it; at the same time told him, he was obliged to make him and all his men prisoners, at the request of their own captain, for a conspiracy to raise a mutiny and run away with the ship. Upon which, two great fat Dutchmen came up to him, and bid him deliver his sword, which he did with some reluctance; for he was a stout strong fellow; but he saw it all to no purpose to dispute or resist.

At the same time, the three men without were made prisoners also by the soldiers. When the governor had thus secured these men, he called them in, and inquired the particulars of the case, and expostulated with them very pathetically upon such a horrid, villanous design, and inquired of them what the occasion could be; and, hearing all they had to say in their defence, told them he could do nothing more in it till their captain came on shore, which would be in a day or two, and that, in the mean time, they must be content to remain in custody, which they did, separated from one another. They were very civilly treated, but strictly kept from speaking or sending any messages to one another, or to the boats.

When this was accomplished, the governor sent six files of musketeers down to the watering-place, with an order to secure all the Englishmen in the two boats, which was done. They seemed inclined to make some resistance at first, being all very well armed; but the seamen of the three Dutch long-boats, joining themselves to the soldiers, and notice being given the English seamen, that if they fired one gun, they should have no quarter; and especially their two prin-

cipa: men, the chief mate and the gunner, being absent, they submitted, and were all made prisoners also.

When this was done, of which the Dutch captain had notice by a signal from the shore, he came off in his shallop, with about sixteen seamen, and five or six gentlemen and officers, to pay his visit to me. I received him with all the appearance of ceremony imaginable, ordered an elegant dinner to be prepared for him, and caused his men to be all treated upon the deck, and made mighty preparations for the feast.

But in the middle of all this, Captain Merlotte, with all his Frenchmen, being thirty-two, appeared in arms on the quarter-deck; the Dutch captain's attendants stood to their arms on the main-deck, and I, with the supereargo, the doctor, and the other captain, leaving the Dutch captain and some men in the great cabin as a reserve, came to the steerage door, cleared the steerage behind me, and stood there with a cutlass in my hand, but said nothing; neither was there a word spoke anywhere all the while.

In this juncture, the chief mate, the faithful midshipmen, the carpenter, and the gunner's mate, with about twenty men whom they could trust, went fore and aft between decks, and secured all the particular men that we had the least suspicion of, being no less than thirty-five more. These they secured, bringing them up into the steerage, where their hands were tied behind them, and they were commanded not to speak a word to one another upon pain of present death.

When this was done, the chief mate came to me to the steerage door, and passing by, went forward with his men, entered the cook-room, and posted himself at the cook-room door. There might be still about eighty men upon the fore-castle and midships upon the open decks; and there they stood staring, and surprised at what was doing, but not being able to guess in the least what was meant, what was the cause of it, or what was intended to be done farther.

When I found all things ready, I moved forward a step or two, and beckoning to the mate to command silence, I told the men that I was not disposed to hurt any man, nor had I done what I now did, but by necessity, and that I expected they should all submit; that, if any one of them made the least resistance, he was a dead man; but that, if they would be easy and quiet, I should give a very good account to them

all, of every part of the voyage, or scheme of a voyage, which I had laid, and which had been so ill represented to them.

Then I caused my commissioner letter of mart to be read to them all, by which it appeared that I was really chief commander of the ship, and had a right to direct the voyage as I thought best; with a paper of written instructions, signed by the owners and adventurers, and directed to me, with another paper of instructions to all the officers, to be directed by me in all things; which, indeed, was all news to them, for they did not think I was the chief captain or commander of the ship and voyage.

When I had done this, I gave them a long and full account of the reasons why I thought it best, as our present circumstances were stated, not to go to the South Seas first, but to go away to the Philippine Islands, and what great prospect of advantage to the owners there was, as well as to the men; and that I wondered much that such measures were taken in the ship as I heard there were; and that I was not, they might see, unprovided of means to reduce every one of them to their duty by force, and to punish those that were guilty, as they deserved, but that I rather desired to win them with kindness; and that, therefore, I had resolved, that if any of them had any reason to dislike the voyage, they should be safely set on shore, and suffered to go to the second mate and his comrades: and farther, I told them what circumstances they were in and how effectually they were secured.

This astonished them, and surprised them exceedingly, and some of them inquired more particularly into the circumstances of the said second mate and his fellows: I told them they were safe enough, and should remain so; for, as I could prove they had all a villanous design to run away with the ship, and set me on shore, either here, or in a worse place, I thought that only upon account of my own safety, such men were not fit to go in the ship, being once capable to entertain such horrid mischievous thoughts, or that could be guilty of such a villany; and that, if any of them were of their minds, they were very welcome, if they thought fit, to go to them.

At this offer, some bold rogues upon the forecastle, which I did not discern, by reason of the number that stood there, cried out, *One and all*, which was a cry, at the same time, of

mutiny and rebellion, that was certain, and in its kind very dangerous.

However, to let them see I was not to be daunted with it, I called out to one of the men among them, whom I saw upon the fore-castle; You Jones, said I, tell me who they are, and come away from them, for I will make an example of them, whoever they are. Will Jones slunk in among the rest, and made me no answer, and immediately *One and all* was cried again, and a little huzza with it, and some of the men appeared to have fire-arms with them. There was a great many of them, and I presently foresaw, that, if I went to the extremity, I should spoil the voyage, though I conquered them; so I bridled my passion with all my power, and said calmly, Very well, gentlemen, let me know what you mean by *one and all*? I offered any of you that did not like to go the voyage to quit the ship; is that what you intend by *one and all*? If so, you are welcome, and pray take care to do it immediately; as for what chests or clothes you have in the ship, you shall have them all with you. Upon this I made the chief mate, who was now come to me again, advance a little with some more men, and get between the men upon the fore-castle and those who were upon the main deck; and, as if he had wanted room, when he had gotten between them, he said to them, Stand aft a little, gentlemen, and so crowded them towards me.

As they came nearer and nearer to where I stood, I had an opportunity to speak to them singly, which I did calmly and smilingly.

Why, how now, Tom, says I, to one of them; what are you among the mutineers?

Lord, sir, says Tom, not I, they are mad, I think; I have nothing to say to them; I care not where I go, not I; I will go round the globe with you, it's all one to me.

Well, Tom, says I, but what do you do among them then? come away into the steerage, and show yourself an honest man.

So Tom comes in, and after him another, and then two more. Upon my saying to Tom, What do you do among them? one of the fellows says to one of the officers that stood at a little distance from me, What does the captain mean by saying, among them? What, does he reckon us to be in the plot? He is quite wrong, we are all ignorant, and

surprised at it. He immediately tells me this, and I was glad, you may be sure, to hear it, and said aloud to the man that he spoke to, If they are honest men, and would not appear in this villany, let them go down between decks, and get out of the way, that they may have no share in the punishment, if they have none in the crime. With all my heart, says one; God bless you, captain, says another, and away they dropt one by one in at the steerage door, and down between decks, every one in his hammock or cabin, till there were not above five or six of them left.

By this time, our two boats appeared from the shore, being both manned with Dutchmen, viz. the Dutch captain's mate and about twenty of his men, all the water casks full, but not a man of mine with them, for they were left on shore in safe custody.

I waited till they came on board, and then turning to the men on the forecastle, I told them they should go on board the boats immediately, as soon as the butts of water were hoisted in. They still said, *One and all*, they were ready, desired they might go and fetch their clothes.

No, no, says I, not a man of you shall set your foot any more into the ship; but go get you into the boat, and what is your own shall be given you into the boat.

As I spoke this in an angry tone, and with a kind of passion, that bespoke resentment to a high degree, they began to see they had no opportunity to choose; and some of them slipt down the scuttle into the cook-room. I had ordered the officer who was there, who was one of the midshipmen, to wink at it, and let as many come down as offered it; and the honest man did more than that, for he went to the scuttle himself, and, as if he had whispered, so that I should not hear him, called them one by one by their names, and argued with them; Prithee, Jaek, says he to one of them, do not you be distracted, and ruin yourself to gratify a rash drunken humour; if you go into the boat you are undone; you will be seized as soon as you come on shore, as the rest are, and will be sent to England in irons, and there you will be infallibly hanged; why you are certainly all mad.

Jaek replies, he had no design to mutiny, but the second mate drew him in, and he did not know what to do, he wished he had not meddled; he knew he was undone; but now what could he do?

Do, says the midshipman, leave them for shame, and slip down here, and I will see and get you off if I can.

Accordingly he pulled him down, and after him so many got out of sight the same way, that there was not above seventeen or eighteen left upon the forecastle.

I seemed to take no notice of that, till at last one of the men that was left there, with his hat or cap in his hand, stepping just to the edge of the forecastle, which was next to me, said, in a very respectful manner, that I saw how many had slunk away and made their peace, or at least obtained pardon, and that I might, perhaps, know that they who were left were only such as had their duty there, being placed there of course before the mutiny began, and that they had no hand in it, but abhorred it with all their hearts, which he hoped I would consider, and not join them with those that had offended, merely because they came upon the forecastle, and mixed there with the men who had the watch.

I told him, if that was true, it would be in their favour, but I expected he would prove it to my satisfaction before I accepted that for an excuse. He told me, it might, perhaps, be hard to prove it, seeing the boatswain and his mate, and the second mate, were gone, but the rest of the ship's crew could all testify that they were a part of the men whose watch it was, and that they were upon the forecastle by the necessity of their duty, and no otherwise; and called several men who were upon duty with them to witness it, who did confirm it.

Upon this, I found myself under a necessity, in justice to the men, to approve it; but my own management was a bite upon myself in it; for, though I did allow the midshipman to wink at their slipping away, as before, yet I made no question but I should have some left to make examples of; but as I could not go back from the promise of mercy which I had allowed the midshipman to offer in my name, so I tricked myself by their mistake into a necessity of pardoning them all, which was very far from my design; but there was no remedy.

However, the men, when they were so happily escaped, desired the midshipman, who had been instrumental to their deliverance, to assure me, that as they were sensible that they had deserved very ill at my hands, and that yet I had

treated them thus kindly, they would not only reveal to me all the particulars of the conspiracy, and the names of those principally concerned in it, but that they would assure me they would never more dispute any of my measures, but were very ready to do their duty as seamen, to what part of the world soever I might think fit to go, or which way I thought fit to carry them, whether outward or homeward; and that they gave me the tender of their duty in this manner with the utmost sincerity and with thankfulness, for my having forgiven them that conduct which was the worst that a seamen could be guilty of.

I took this very kindly, and sent them word I did so, and that they should see they had taken the wiser course; that I had an entire confidence in their fidelity; and that they should never find I would reproach them with, or use them the worse for, what had past.

I must confess, I was very glad of this submission of the men; for though, by the measures I had taken, I was satisfied I should conquer them, and that I was safe from their attempts; yet, carrying it on by resentment, and doing justice upon the offenders, whatever advantage it had one way, had this disadvantage in the consequence; viz., that it would ruin the voyage, for at least half the men were in the plot.

Having thus conquered them by good usage, I thought my next work was to inquire into the mistakes which had been the foundation of all this: so, before I parted with the men who had returned to their duty, I told them, that as I had freely forgiven what was past, so I would keep my word, that I would never reproach them with it; but that I thought it was necessary their judgments should be convinced how much they were imposed upon, as well as their tempers be reduced by my kindness to them. That I was of the opinion that they had been abused in the account given them of what I had designed to do, and of the reasons I had to give for doing it; and I would desire them to let me know afterwards, whether they had been faithfully informed or not; and whether in their own judgment, now when they were freed from the prepossessions they were under, they could object anything against it or no.

This I did with respect to the other men whom I had made prisoners in the steerage, whom I had the same design

to be kind to as I had to these; but upon whom I resolved to work this way, because, after all, I might have this work to do over again, if I should meet with any disappointment or miscarriage in the voyage; or especially, if we should be put to any difficulties or distresses in the pursuing it.

In order to this I caused the voyage itself, and the reasons of it, the nature of the trade I was to carry on by it, the pursuit of it to the South Seas, and, in a word, everything just as we had argued and settled it in the great cabin, to be put into writing and read to them.

The fellows, every one of them, declared they were fully satisfied in the voyage itself, and that my reasons for it were perfectly good; and that they had received a quite different account of it; as that I would carry them into the island of the Moluccas, which was the most unhealthy part of the East Indies; that I would go away to the south for new discoveries; and that I would go away thence to the South Seas; which was a voyage of such a length, that no ship could victual for; that it was impossible to carry fresh water such a length; and, in a word, that it was a voyage that would destroy us all.

It was the chief mate and the midshipman who took them all down the scuttle, that brought me this account from them: so I made him take two of those penitent mutineers with him, and go to the men in the steerage, whom he had made prisoners at first, and see whether their delusions were of the same kind, and what kind of temper they were in; accordingly, he went to them directly, for this was not a business that admitted giving them time to club and cabal together, and form other societies or combinations which might have consequences fatal to us still.

When he came to them, he told them, the captain was willing to do all the justice possible to his men, and to use them, on all occasions, with equity and kindness; that I had ordered him to inquire calmly what it was had moved them to these disorders, and what it was which they had been made to believe was doing, that they could enter into measures so destructive to themselves, and to those who had intrusted them all with the ship and cargo; for that, in a voyage, every foremast-man, in his degree, is trusted with the safety of the whole ship.

They answered it was the second mate; that they had

never shown themselves discontented, much less disorderly, in the ship; that they had, on all occasions, done their duty through the whole voyage till now; and that they had no ill design upon any one, much less had they any design to destroy the voyage, or injure the captain; but that they were all told by the second mate, that the captain had imposed upon them, by proposing a mad voyage to the south pole, that would be the death of them all, and that they were to lay aside the trading and cruising voyages which they came out upon, and were now to spend the whole voyage in new discoveries; by which the men could propose nothing to themselves but hardships, and perhaps perishing with hunger and cold; whereas, had they gone to the South Seas as was intended, they might all have been made; and that the hazards, with that prospect, had some consolation in them; whereas, in this project, there was nothing but certain destruction.

The mate delivered them a copy of the scheme I had proposed, the reasons of it, the trade I had designed, the return I was to make, and everything, as I have already mentioned, and bade them take it and consider of it.

As I was justly provoked to see how I had been abused and misrepresented to the men, so they were astonished when they read my scheme, and saw what mischiefs they had been led into, for they knew not what, and without any reason or just consideration: and, after they had debated things awhile among themselves, they desired the chief mate might come to them again, which he did; then they told him, that as they had been thus grossly abused, and drawn into mischiefs which they never designed, by such plausible pretences, and by being told such a long story full of lies, and to carry on an infernal project of the second mate's, they hoped their being so much imposed upon would a little extenuate their fault; that they were convinced the captain had proposed nothing but what was very rational, and a voyage that might be very profitable to the owners and to every individual; and they entirely threw themselves upon the captain's mercy, and humbly begged pardon; that, if I pleased to forgive them, they would endeavour to merit such forgiveness by their future behaviour; and that, in the mean time, they submitted to what punishment I pleased to lay upon them: and, particularly, that, as they had forfeited, by

their conspiraey, all the claims they had upon the ship, and might justly have been turned on shore at the first land they came to, they were willing to sign a discharge for all their wages due to them, which was now near eight months a man, and to be considered for the rest of the voyage as they deserved: that they would all take a solemn oath of fidelity to me to do their duty, to go wherever I would earry them, and to behave with the greatest submission and diligence, in hopes to regain my favour by their future behaviour, and to show their gratitude for the pardon I should grant them.

This was, indeed, just as I would have it, for I wanted nothing more than to have something offered, which I might give them back again; for I ever thought, and have found it by experieene, to be the best way; and men were always secured in their duty by a generous kindness, better than by absolute dominion and severity: indeed, my opinion was justified in all the measures I took with these men; for as I found they were suffieiently humbled, and that I had brought them low enough, I let them know that it was not their punishment but their amendment I desired; that I scorned to make a prey of them, and take that forfeiture they had offered, by putting the wages due to them for their labour in my pocket. I then sent them word I was very glad to hear that they were sensible how much they had been imposed upon; that, as it was not my design to offer anything to them which they or any honest men ought to refuse, so it was not my desire to make any advantages of their follies but what might tend to bring them baek to their duty; that, as I had no prospect that was inconsistent with their safety and interest, so I scorned to make an advantage of their submission; that as to their wages, though they had forfeited them by their mutiny, yet God forbid I should convert them to my own profit; and since forgiving their offence was in my power, the erime being in one particular an offence against me, they should never be able to say I made a gain of their submission, and, like the Pope, should sell them my pardon; that, upon their solemnly engaging to me never to offer the least disturbance of any kind in the ship for the future, but to do their duty faithfully and cheerfully, I would forget all that was passed; only this I expected, that two of them, who were particuarly guilty of threatening the life of Captain Merlotte, should be punished as they deserved.

They could not deny but this was most just; and they did not so much as offer to intercede for those two; but, when one of the two moved the rest to petition for them, they answered they could not do it, for they had received favour enough for themselves, and they could not desire anything of the captain for their sakes, for they had all deserved punishment as well as they.

In a word, the two men were brought upon deck, and soundly whipped and pickled; and they all proved very honest ever after: and these, as I said at first, were two-and-thirty in all.

All this while Captain Merlotte with his Frenchmen were in arms, and had possession on the quarter-deck to the number of twenty-three stout men; I had possession of the main-deck with eighteen men and the sixteen Dutchmen, and my chief mate with the midshipman, had possession of the cook-room and quarter-deck; the Dutch captain, our supercargo, the surgeon, and the other captain, kept the great cabins with a guard of twelve musketeers without the door, and about eight more within, besides servants. Captain Merlotte's man also had a guard of eight men in the roundhouse. I had now nothing to do but with my men who were on shore; and of these, six were no way culpable, being men not embarked in the design, but carried on shore by the chief mate, with a design to engage them with him; so that, indeed, they fell into a punishment before they fell into the crime, and what to do with these men was a nice point to manage.

The first thing I did, was to dismiss my visitor, the Dutch captain, whom I had a great deal of reason to think myself exceedingly obliged to: and, first, I handsomely rewarded his men, to whom I gave four pieces of eight a man; and having waited on the captain to the ship's side, and seen him into his boat, I fired him twenty-one guns at his going off; for which he fired twenty-five when he came on board his ship.

The same afternoon I sent my pinnace on board him for my drunken cockswain, and with the pinnace I sent the captain three dozen bottles of English beer, and a quarter cask of Canary, which was the best present I had to make him; and sent every one of his other seamen a piece of eight per man; and, indeed, the assistance I had from the ship deserved

it; and to the mate, who acted so bravely with my men on shore, I sent fifty pieces of eight.

The next day I went on shore to pay my respects to the governor, when I had all the prisoners delivered up to me. Six men I caused to be immediately set at liberty, as having been innocent, and brought all the rest on board, tied hand and foot, as prisoners, and continued them so, a great while afterward, as the reader will find. As for the second mate, I tried him formally by a council of war, as I was empowered by my commission to do, and sentenced him to be hanged at the yard-arm: and though I suspended the execution from day to day, yet I kept him in expectation of the halter every hour; which, to some, would have been as grievous as the hanging itself.

Thus we conquered this desperate mutiny, all principally proceeding from suffering the private disputes among ourselves, which ought to have been the arcana of the whole voyage, and kept as secret as death itself could have kept it, I mean so as not to come among the seamen afore the mast.

We lay here twelve days, during which time we took in fresh water as much as we had casks for, and were able to stow. On the 13th day of August, we weighed and stood away to the east, designing to make no land any more till we came to Java Head, and the Straits of Sunda, for that way we intended to sail; but the wind sprung up at E. and E. S. E., and blew so fresh, that we were obliged, after two days' beating against it, to bear away afore it, and run back to the Cape of Good Hope.

While we were here, there came in two Dutch East Indiamen more, homeward-bound, to whom had happened a very odd accident.

They had been attacked by a large ship of forty-four guns, and a stout sloop of eight guns; the Dutch ships resolving to assist one another, stood up to the Frenchman, (for such it seems he was,) and fought him very warmly. The engagement lasted six or seven hours; in which the privateer had killed them some men; but in the heat of the fight, the sloop received a shot, which brought her mainmast by the board; and this caused the captain of the frigate to sheer off, fearing his sloop would be taken; but the sloop's men took care of themselves, for, hauling a little out of the fight, they got into their own boats, and a boat which the frigate sent to their

help, and abandoned the sloop; which the Dutchmen perceiving, they manned out their boats, and sent and took the sloop with all that was in her, and brought her away with them.

The Dutchmen came into the road at the Cape with this prize while our ship was there the second time; and we saw them bringing the sloop in tow, having no mast standing, but a little pole-mast set up for the present, and her mizen, which was also disabled, and of little use to her.

I no sooner saw her, but it came into my thoughts, that, if she was anything of a sea-boat, she would do our business to a tittle; and, as we had always resolved to get another ship, but had been disappointed, this would answer our end exactly; accordingly I went with my chief mate, in our shallop, on board my old acquaintance the Dutch captain, and inquiring there, was informed that it was a prize taken, and that in all probability the captain that took her would be glad to part with her; and the captain promised me to go on board the ship that brought her in, and inquire about it, and let me know.

Accordingly, the next morning the captain sent me word I might have her; that she carried eight guns, had good store of provisions on board, with ammunition sufficient, and I might have her and all that was in her for twelve hundred pieces of eight. In a word, I sent my chief mate back with the same messenger and the money, giving him commission to pay for her, and take possession of her, if he liked her; and the Dutch captain, my friend, lent him twelve men to bring her off to us, which they did the same day.

I was a little put to it for a mast for her, having not anything on board we could spare that was fit for a main-mast; but resolving at last to mast her not as a sloop, but as a brigantine, we made shift with what pieces we had, and a spare foretop-mast, which one of the Dutch ships helped me to; so we fitted her up very handsomely, made her carry twelve guns, and put sixty men on board. One of the best things we found on board her, were casks, which we greatly wanted, especially for barrelling up beef and other provisions, which we found very difficult; but our cooper eked them out with making some new ones out of her old ones.

After staying here sixteen days more, we sailed again. Indeed, I thought once we should never have gone away at

all; for it is certain above half the men in the ship had been made uneasy, and there remained still some misunderstanding of my design, and a supposition of all the frightful things the second mate had put in their heads; and, by his means, the boatswain and gunner.

As these three had the principal management of the conspiracy, and that I had pardoned all the rest, I had some thoughts of making an example of these; I took care to let them know it, too, in a manner that they had no room to think it was in jest, but I intended to have them all three hanged; and I kept them above three weeks in suspense about it: however, as I had no intention to put them to death, I thought it was a piece of cruelty, something worse than death, to keep them continually in expectation of it, and in a place too where they had but little more than room to breathe.

So, having been seventeen days gone from the Cape, I resolved to relieve them a little, and yet at the same time remove them out of the way of doing me any capital injury, if they should have any such design still in their heads. For this purpose, I caused them to be removed out of the ship into brigantine, and there I permitted them to have a little more liberty than they had on board the great ship; and where two of them entered into another conspiracy, as wild and foolish as ever I heard of, or as, perhaps, was ever heard of by any other; but of this I shall say more in its place.

We were now to sail in company, and we went away from the Cape, the 3rd of September, 1714. We found the brigantine was an excellent sea-boat, and could bear the weather to a miracle, and no bad sailer; she kept pace with us on all occasions, and in a storm we had at S. S. E., some days after, she shifted as well as we did in the great ship, which made us all well pleased with her.

This storm drove us away to the northward; and I once thought we should have been driven back to the Cape again; which, if it had happened, I believe we should never have gone on with the voyage; for the men began to murmur again, and say we were bewitched; that we were beaten off first from the south of America, that we could never get round there, and now driven back from the south of Africa; so that, in short, it looked as if fate had determined this voyage to be pursued no farther. The wind continued, and

blew exceeding hard : and, in short, we were driven so far to the north, that we made the south point of the island of Madagascar.

My pilot knew it to be Madagascar as soon as he had a clear view of the land ; and, having beaten so long against the sea to no purpose, and being in want of many things, we resolved to put in ; and accordingly made for Port St. Augustine, on the west side of the island, where we came to an anchor in eleven fathom water, and a very good road.

I could not be without a great many anxious thoughts upon our coming into this island ; for I knew very well that there was a gang of desperate rogues here, especially on the northern coast, who had been famous for their piracies ; and I did not know but that they might be either strong enough as pirates to take us, or rogues enough to entice a great many of my men to run away ; so I resolved neither to come near enough the shore to be surprised, nor to suffer any of my men to go on shore, such excepted as I could be very secure of.

But I was soon informed by a Dutchman, who came off to me with some of the natives in a kind of canvass boat, that there were no Europeans there but himself, and the pirates were on the north part of the island ; that they had no ship with them of any force, and that they would be glad to be fetched off by any Christian ship ; that they were not above two hundred in number, their chief leaders, with the only ships of force they had, being out a cruising on the coast of Arabia, and the Gulf of Persia.

After this, I went on shore myself with Captain Merlotte, and some of the men whom I could trust ; and we found it true as the Dutchman had related. The Dutchman gave us a long history of his adventures, and how he came to be left there by a ship he came in from Europe, which, he running up into the country for sport with three more of his comrades, went away without them, and left them among the natives, who, however, used them extremely well ; and that now he served them for an interpreter and a broker, to bargain for them with the European ships for provisions. Accordingly, he engaged to bring us what provisions we pleased, and proposed such trinkets in return as he knew the natives desired, and as were of value little enough to us ; but he desired a consideration for himself in money, which, though it

was of no use to him there, he said it might be hereafter ; and, as his demand was but twenty pieces of eight, we thought he very well deserved them.

Here we bought a great quantity of beef, which, having no casks to spare, we salted, and then cured it in the sun, by the Dutelman's direction, and it proved of excellent use to us through the whole voyage ; for we kept some of it till we came to England, but it was then so hard, that a good hatchet would hardly cut it.

While we lay here, it came into my thoughts, that now was a good time to execute justice upon my prisoners ; so I called up the officers to a kind of council of war, and proposed it to them in general terms, not letting them know my mind as to the manner of it. They all agreed it was necessary, and the second mate, boatswain, and gunner, had so much intelligence of it from the men, that they prepared for death as much as if I had signed a dead-warrant for their execution, and that they were to be hanged at the yard-arm.

But, in the midst of those resolves, I told the council of officers, my design was to the north part of the island, where a gang of pirates were said to be settled, and that I was persuaded I might get a good ship among them, and as many men as we desired, for that I was satisfied the greatest part of them were so wearied of their present situation, that they would be glad of an opportunity to come away, and especially such as had, either by force, or rash, hasty resolutions, been, as it were, surprised into that sort of life ; that I had been informed they were very far from being in such a formidable posture as they had been represented to us in Europe, or anything near so numerous ; but that, on the contrary, we should find them poor, divided, in distress, and willing to get away upon any terms they could.

Some of the officers of the ship differed from me in my opinion. They had received such ideas of the figure those people made in Madagasear, from the common report in England, that they had no notion of them, but as of a little commonwealth of robbers ; that they were immensely rich ; that Captain Avery was king of the Island ; that they were eight thousand men ; that they had a good squadron of stout ships, and that they were able to resist a whole fleet of men of war ; having a harbour so well fortified at the entrance into it, that there was no coming at them without a good army for land-service, to assist in the enterprise.

I convinced them how impossible this was to be true, and told them all the discourse I had with the Dutchman, at the place where I now was, who had received a full account of the particulars from several of them who had come down to St. Augustine's in little boats in order to make their escape from their comrades, and to get passage for Europe; that he had always assisted, and got them off, whenever any ship touched at that port; and that they all agreed in their relation of their state and condition, which was indeed miserable enough, saving that they wanted not for victuals.

In a word, I soon brought them to enter into the reason of it, and to be of my opinion; and, accordingly, I ordered to get ready, and in three days' time weighed anchor, and stood away for the north of the island, taking care not to communicate our debates and resolves to the men before the mast, as had been done before, we having had enough of that already.

While we were thus coasting the island to the north, and in the channel or sea between the island and the main of Africa, it came into my thoughts, that I might now make use of my traitors to my advantage and their own too, and that I might, if they were honest, gain my end, and get a full intelligence of the people I had my eye upon; and, if they were still traitors, they would desert and go over to the pirates, and I should be well rid of them, without the necessity of bringing them to the yard-arm; for I was very uneasy in my mind about hanging them, nor could I ever have been brought to do it, I believe, whatever risk I had run from their mutinous disposition.

I was now got in the latitude of fifteen degrees and a half south of the line, and began to think of standing in for the shore; when I ordered the second mate, who lay in irons in the brigantine, to be brought on board the great ship, and to be called up into the great cabin. He came in great concern, though he was of himself a very bold and resolute fellow, yet, as he made no doubt that he was sent for to execution, he appeared thoroughly softened, and quite another man than he was before.

When he was brought in, I caused him to be set down in a nook of the cabin where he could not stir to offer any violence to me, had he been so inclined, two large chests being just before him; and I ordered all my people to withdraw, except Captain Merlotte and the supercargo; and

then, turning myself to the criminal, I told him, as he knew his circumstances, I need not repeat them, and the fact for which he was brought into that condition ; that I had hitherto, from time to time, delayed his execution, contrary to the opinion of the rest of the chief officers, who in full council had unanimously condemned him ; that a sudden thought had come into my mind, which, if he knew how to merit mercy, and to retrieve his circumstances by his future fidelity, might once again put it into his power, not only to save his life, but to be trusted in the ship again, if he inclined to be honest ; that, however, if he had no inclination to merit by his service, I would put it to his choice, either to undertake with courage and fidelity what I had to propose to him, in which case he might expect to be very well treated, or, if not, I would pardon him as to the death he had reason to expect, and he with his two fellow-criminals should be set on shore to go whither they pleased.

He waited, without offering to speak a word, till I made a full stop, and then asked me if I gave him leave to answer.

I told him he might say whatever he thought proper.

Then he asked if I gave him leave to speak freely, and would not take offence at what he might say ? I replied, he should speak as freely as if he had never offended ; and that, as I had given him his life, I now would give him my word, nothing he could say should revoke the grant ; and that he should not only go freely on shore, (for I expected by his words that he had made that choice) but I would give him the lives of his two fellow-prisoners ; and would give them arms and ammunition, and anything else that was reasonable for them to ask, or necessary to their subsisting on shore in such a country.

He told me then, that had it been any other part of the world than at Madagascar, he would readily have chosen to have gone on shore ; nay, though the place had been really desolate and uninhabited ; that he did not object because my offer was not very generous and kind, and that it would be always with regret that he should look back upon the mercy he should have received, and how ill he had deserved it at my hands.

But that as it was at this place that I mentioned setting him at liberty, he told me, that though he had been mutinous and disorderly, for which he had acknowledged he had

deserved to die, yet he hoped I could not think so ill of him as to believe he could turn pirate; and begged that, rather than entertain such hard thoughts of him, I would execute the worst part of the sentence, and send him out of the world a penitent and an honest man, which he should esteem far better than to give him his life in a condition in which he could preserve it upon no other terms than those of being the worst of villains. He added, that if there was anything he could do to deserve so much mercy as I intended him, he begged me that I would give him room to behave himself as became him, and he would leave it wholly to me to use him as he should deserve, even to the recalling the pardon that I had granted him.

I was extremely satisfied with what he said, and more particularly with the manner of his speaking it; I told him I was glad to see that he had a principle of so much honesty at the bottom of a part so unhappy as he had acted; and I would be very far from prompting him to turn pirate, and much more from forcing him to do so, and that I would, according to his desire, put an opportunity into his hands to show himself a new man, and, by his fidelity, to wipe out all that was past. And then, without any more ceremony, I told him my whole design, which was, to send him, and four or five more men with him, on shore among the pirates as spies, to see what condition they were in, and to see whether there were any apprehensions of violence from them, or whether they were in the mean circumstances that I had reason to believe they were in; and, lastly, whether they had any ship or vessel which might be bought of them, and whether men might be had to increase our company; that is to say, such men as, being penitent for their rogueries and tired with their miseries, would be glad of the opportunity of turning honest men before they were brought to it by distress and the gallows.

He embraced the offer with the greatest readiness, and gave me all the assurances that I could desire of his fidelity. I then asked him whether he thought his two fellow-prisoners might be trusted upon the same conditions.

In reply, he asked me if I would take it for a piece of sincerity, if, after a trial, he should tell me his mind, and would not be displeased if he declined speaking his thoughts till he had talked with them.

I told him he should be at liberty to give his farther answer after he had proposed it to them; but I insisted upon his opinion first, because it was only his opinion that I asked now; whereas, if he reported it to them, then he had no more to do but to report their answer.

He then asked me if I would please to grant him one thing, that, whatever his opinion should be, what he should say should be no prejudice to them in their present condition.

I told him it was a reasonable caution in him, and I would assure him that, whatever he said should not do them any prejudice; and, to convince him of it, I gave him my word that I would not put them to death on any account whatsoever, merely for his sake.

He bowed, and thanked me very heartily for that grant, which, he said, obliged him to be the plainer with me on that head; and as, he said, he would not deceive me in anything whatever, so he would not in this, especially; and therefore told me it was his opinion, they would not serve me faithfully; and he referred me to the experience I should find of it; and added, that he would be so just to me in the beginning, as that, while he begged to be merciful to them, yet for my own sake he would also beg me not to trust them.

I took the hint, and said no more at that time, but ordered his irons to be taken off, with direction for him to have leave to go to his former cabin, and to have his chests and things restored to him; so that he was at full liberty in the ship, though not in any office, or appointed to any particular business.

A day or two after this we made land, which appeared to be the north-west part of the island, in the latitude of $13^{\circ} 30'$; and now I thought it was time to put our design into execution; for I knew very well that it could not be a great way from this part of the island where the pirates were to be heard of: so I ordered the boat on shore, with about sixteen men, to make discoveries, and with them my new-restored man.

I gave him no instruction for anything extraordinary at this time, our work now being only to find out where they were. The boat came on board again at night, (for we had now stood in within two leagues of the shore) and brought us an account, that there were no English or Europeans

on that part of the island, but that they were to be heard of a great way farther; so we stood away to the north all the night, and the next day, the wind being fair and the sea smooth, and by our reckoning we went in that time about forty leagues.

The next evening, the same company went on shore again, and were shown by some of the natives where the pirates inhabited; which, in short, was about five or six and twenty miles farther north still, in a river very commodious for shipping, where they had five or six European-built ships, and two or three sloops, but they were all laid up, except two sloops, with which they cruised sometimes a great distance off to the north, as far as the Arabian Gulf. The mate returned with this intelligence the same night; and by his direction we stood in as close under the shore as we could conveniently, about six leagues farther north; here we found a very good road under a little cape, which kept us perfectly undiscovered; and in the morning, before day, my man went on shore again with the boat, and keeping only four men with him, sent the boat on board again, agreeing on a signal for us to send the boat for him again when he should return.

There was a pretty high ledge of hills to the north of the place where he landed, and which, running west, made the little cape, under the lee of which our ship rode at anchor.

As soon as he came to the top of those hills, he plainly discovered the creek or harbour where the pirates' ships lay, and where they had formed their encampment on the shore. Our men took proper observations of the situation of the place they were in, upon the hill, that they might not fail to find their way back again, though it were in the night; and that, by agreeing in the account they should give of themselves, they might be all found in the same tale. They boldly went down the hill, and came to the edge of the creek, the pirates' camp being on the other shore.

Here they fired a gun, to raise a kind of alarm among them, and then, hanging out a white cloth on the top of a pole, a signal of peace, they hailed them in English, and asked them if they would send a boat and fetch them over.

The pirates were surprised at the noise of the piece, and came running to the shore with all speed; but they were much more surprised when they heard themselves hailed in

English. Upon the whole, they immediately sent a boat to fetch them over, and received them with a great deal of kindness.

Our men pretended to be overjoyed at finding them there, told them a long story, that they came on shore on the west side of the island, where, not far off, there were two English ships; but that the natives quarrelling with their men, upon some rudeness offered to their women, and they being separated from their fellows, were obliged to fly; that the natives had surrounded the rest, and, they believed, had killed them all; that they wandered up to the top of the hill, intending to make signals to their ship, to send them some help, when, seeing some ships, and believing some Europeans were there, they came down to take some shelter, and begged of them a boat to carry them round the cape to their comrades, unless they would give them leave to stay with them, and do as they did, which they were very willing to do.

This was all a made story; but, however, the tale told so well, that they believed it thoroughly, and received our men very kindly, led them up to their camp, and gave them some victuals.

Our men observed they had provisions enough, and very good, as well beef as mutton, that is to say, of goats' flesh, which was excellent; also pork and veal; and they were tolerable good cooks too; for they found they had built several furnaces and boilers, which they had taken out of their ships, and dressed a great quantity of meat at a time: but, observing they had no liquor, the mate pulled a large bottle of good cordial water out of his pocket, and gave it about as far as it would go, and so did two others of the men, which their new landlords took very kindly.

They spent good part of the first day in looking about them, seeing the manner of the pirates' living there, and their strength, and soon perceived that they were indeed in but a sorry condition every way, except that they had live cattle and flesh meat sufficient. They had a good platform of guns indeed, and a covered pallisadoe round where they lodged their ammunition: but as for fortifications to the landward, they had none, except a double pallisadoe round their camp, and a sort of a bank thrown up within to fire from, and stand covered from the enemies' lances, which was all they had to fear from the natives. They had no bread but

what they made of rice, and the store they had of that was very small: they told our men, indeed, that they had two ships abroad, which they expected back every day, with a quantity of rice, and what else they could get, especially some arrack, which they were to trade for with the Arabian merchants, or take it by force, which should first offer.

Our men pretended to like their way of living mighty well and talked of staying with them, if they would let them; and thus they passed their first day of meeting.

Our men had two tents or huts given them to lodge in, and hammocks hung in the huts very agreeably, being such, I suppose, as belonged to some of their company who were dead, or were out upon adventure; here they slept very securely, and in the morning walked about, as strangers might be suffered to do, to look about them. But my new manager's eye was chiefly here upon two things: first, to see if they had any shipping for our purpose; and, secondly, to see if he could pitch upon one man, more likely than the rest, to enter into some confidence with; and it was not long before he found an opportunity for both. The manner was thus:

He was walking by himself, having ordered his other men to straggle away, two and two, this way and that, as if they had not minded him, though always to keep him in sight; I say, he walked by himself towards that part of the creek where, as was said, three of their largest ships lay by the walls, and when he came to the shore right against them, he stood still, looking at them very earnestly.

While he was here, he observed a boat put off from one of them, with four oars and one sitter only, whom they set on shore just by him, and then put off again; the person whom they set on shore, was, it seems, one who had been with our men the evening before, but, having some particular office on board one of those ships, lay on board every night with about ten or twelve men, just to watch and guard the ship, and so came on shore in the morning, as is usual in men-of-war laid up.

As soon as he saw our man he knew him, and spoke very familiarly to him; and seeing he was looking so earnestly at the ship, he asked him if he would go on board; our man faintly declined it, as on purpose to be asked again, and upon just as much farther pressing as was sufficient to satisfy him that the gunner (for that was his office) was in earnest,

he yielded; so the gunner called back the boat, and they went on board.

Our man viewed the ship very particularly, and pretended to like everything he saw; but, after some conversation, asked him this home question, namely, Why they did not go to sea, and seek purchase, having so many good ships at their command?

He shook his head, and told him very frankly, that they were in no condition to undertake anything, for that they were a crew of unresolved, divided rogues; that they were never two days of a mind; that they had nobody to command, and therefore nobody to obey; that several things had been offered, but nothing concluded; that, in short, they thought of nothing but of shifting every one for himself as well as he could.

My mate replied, he thought it had been quite otherwise, and that made him tell them the night before that he had an inclination to stay with them.

I heard you say so, said the gunner, and it made me smile; I thought in myself that you would be of another mind when ye knew us a little better; for, in a word, said he, if our people should agree to lend you a boat to go back to your ship, they would fall together by the ears about who should go with you, for not a man of them that went with you would ever come back again hither, if your captain would take them on board, though the terms were, to be hanged when they came to England.

My mate knew that this was my opinion before; but he was really of another mind himself, till he saw things and till he talked with the gunner, and this put new thoughts in his head; so he entertained the gunner with a scheme of his own, and told him, if it was so as he related it, and that he had really a mind to come off from the gang, he believed that he could put him in a way how to do it to his advantage, and to take a set of his people with him, if he could pick out some of them that might be depended upon.

The gunner replied, I can pick out a set of very brave fellows, good seamen, and most of them such as, having been forced into the pirates' ships, were dragged into that wicked life they had lived, not only against their consciences, but by a mere necessity to save their lives, and that they would be glad at any price to go off.

The mate then asked him, Pray, gunner, how many such men can you answer for?

Why, says he, after a short pause, I am sure I can answer for above a hundred.

Upon this my mate told him the circumstances we were in, the voyage we were upon; that we were a letter of mart ship of such a force, but that we were over-manned and double-stored, in hopes of getting a good ship upon our cruise to man out of the other; that we had been disappointed, and had only got the sloop or brigantine which we bought at the Cape; that, if he could persuade the men to sell us one of their ships, we would pay them for it in ready money, and perhaps entertain a hundred of their men into the bargain.

The gunner told him he would propose it to them; and added, in positive terms, that he knew it would be readily accepted, and that he should take which of the three ships I pleased.

The mate then desired that he would lend him his shallop to go on board our ship, to acquaint me with it, and bring back sufficient orders to treat.

He told him, he would not only do that, but, before I could be ready to go, he would propose it to the chief men that he had his eye upon, and would have their consent, and that then he would go along with him on board to make a bargain.

This was as well as our mate could expect; and the gunner had either so much authority among them, or the men were so forward to shift their station in the world, that the gunner came again to our mate in less than two hours, with an order, signed by about sixteen of their officers, empowering him to sell us the ship which the gunner was on board of, and to allot so many guns, and such a proportion of ammunition to her, as was sufficient, and to give the work of all their carpenters for so many days as were necessary to repair her, calk, and grave her, and put her in condition to go to sea.

She was a Spanish-built ship; where they had her the gunner said he did not know; but she was a very strong, tight ship, and a pretty good sailer.

We made her carry two-and-thirty guns, though she had not been used to carry above twenty-four.

The gunner being thus empowered to treat with my mate,

came away in their shallop, and brought the said gunner and two more of their officers with him, and eight seamen. The gunner and I soon made a bargain for the ship, which I bought for five thousand pieces of eight, most of it in English goods such as they wanted; for they were many of them almost naked of clothes, and, as for other things, they had scarce a pair of stockings or shoes among them.

When our bargain was made, and the mate had related all the particulars of the conference he had had with the gunner, we came to talk of the people who were to go with us: the gunner told us that we might indeed have good reason to suspect a gang of men who had made themselves infamous all over the world by so many piracies and wicked actions; but, if I would put so much confidence in him, he would assure me, that, as he should have the power in his hands to pick and choose his men, so he would answer body for body for the fidelity of all the men he should choose; and that most, if not all of them, would be such as had been taken by force out of other ships, or wheedled away when they were drunk: and he added, there never was a ship load of such penitents went to sea together as he would bring us.

When he said this, he began to entreat me that I would please to give him the same post which he held in the ship, viz., of gunner, which I promised him; and then he desired I would permit him to speak with me in private; I was not at first very free to it, but he having consented to let the mate and Captain Merlotte be present, I yielded.

When all the rest were withdrawn, he told me, that having been five years in the pirates' service, as he might call it, and being obliged to do as they did, I might be sure he had some small share in the purchase; and however he had come into it against his will, yet, as he had been obliged to go with them, he had made some advantage; and that, being resolved to leave them, he had a good while ago packed up some of the best of what he had got, to make his escape, and begged I would let him deposit it with me as a security for his fidelity.

Upon this he ordered a chest to be taken out of the shallop, and brought into my great cabin; and, besides this, gave me out of his pocket, a bag, sealed up, the contents of which I shall speak of hereafter.

The shallop returned the next day, and I sent back the

mate with my long-boat and twenty-four men, to go and take possession of the ship; and appointed my carpenter to go and see to the repairs that were necessary to be done to her: and some days after, I sent Captain Merlotte with the supercargo, in our sloop, to go and secure the possession, and to cover the retreat of any of the men who might have a mind to come away, and might be opposed by the rest; and this was done at the request of the gunner who foresaw there might be some debate about it.

They spent six weeks and some odd days in fitting out this ship, occasioned by the want of a convenient place to lay her on shore in, which they were obliged to make with a great deal of labour; however, she was at last completely fitted up.

When she was equipped, they laid in a good store of provisions, though not so well cured as to last a great while. One of the best things we got a recruit of here was casks, which, as said before, we greatly wanted, and which their coopers assisted us to trim, season, and fit up.

As to bread, we had no help from them; for they had none but what they made of rice, and they had not sufficient store of that.

But we had more to do yet: for, when the ship was fitted up, and our men had the possession of her, they were surprised one morning, on a sudden, with a most horrible tumult among the pirates: and had not our brigantine been at hand to secure the possession, I believe they had taken the ship from our men again, and perhaps have come down with her and their two sloops, and have attacked us. The case was this:

The gunner, who was a punctual fellow to his word, resolved that none of the men should go in the ship but such as he had singled out; and they were such as were generally taken out of merchant ships by force: but when he came to talk to the men of who should go, and who should stay, truly they would all go, to a man, there was not a man of them would stay behind; and, in a word, they fell out about it to that degree that they came to blows, and the gunner was forced to fly for it, with about twenty-two men that stood to him, and six or seven were wounded in the fray, whereof two died.

The gunner being thus driven to his shifts, made down to

the shore to his boat, but the rogues were too nimble for him, and had got to his boat before him, and prepared to man her and two more, to go on board and secure the ship.

In this distress, the gunner, who had taken sanctuary in the woods at about a mile distance, but unhappily above the camp, so that the platform of guns was between him and the ship, had no remedy but to send one of his men, who swam very well, to take a compass round behind the pirates' camp and come to the water-side below the camp and platform, so to take the water and swim on board the ship, which lay near a league below their said camp, and give our men notice of what had happened; to warn them to suffer none of their men to come on board, unless the gunner was with them; and if possible, to send a boat on shore to fetch off the gunner and his men, who were following by the same way, and would be at the same place, and make a signal to them to come for him.

Our men had scarce received this notice, when they saw a boat full of men put off from the platform, and row down under shore towards them: but as they resolved not to suffer them to come on board, they called to them by a speaking-trumpet, and told them they might go back again, for they should not come on board, nor any other boat, unless the gunner was on board.

They rowed on for all that, when our men called to them again, and told them, if they offered to put off, in order to come on board, or, in short, to row down shore any farther than a little point which our men named, and which was just ahead of them, they would fire at them. They rowed on for all this, and even till they were past the point; which our men seeing, they immediately let fly a shot, but fired a little ahead of them, so as not to hit the boat, and this brought them to a stop; so they lay upon their oars awhile, as if they were considering what to do, when our men perceived two boats more come off from the platform, likewise full of men, and rowing after the first.

Upon this, they called again to the first boat with their speaking-trumpet, and told them, if they did not all go immediately on shore, they would sink the boat. They had no remedy, seeing our men resolved, and that they lay open to the shot of the ship; so they went on shore accordingly,

and then our men fired at the empty boat, till they split her in pieces, and made her useless to them.

Upon this firing, our brigantine, which lay about two leagues off in the mouth of a little creek, on the south of that river, weighed immediately, and stood away to the opening of the road where the ship lay; and the tide of flood being still running in, they drove up towards the ship, for her assistance, and came to an anchor about a cable's length ahead of her, but within pistol-shot of the shore; at the same time sending two-and-thirty of her men on board the great ship, to reinforce the men on board, who were but sixteen in number.

Just at this time, the gunner and his twenty-one men, who heard the firing, and had quickened their pace, though they had a great compass to fetch through woods and untrod paths, and some luggage to carry too, were come to the shore, and made the signal, which our men in the ship observing, gave notice to the officer of the brigantine to fetch them on board, which he did very safely. By the way, as the officer afterwards told us, most of their luggage consisted in money, with which, it seems, every man of them was very well furnished, having shared their wealth at their first coming on shore: as for clothes, they had very few, and those all in rags; and as for linen, they had scarce a shirt among them all, or linnen enough to have made a white flag for a truce, if they had occasion for it: in short, a crew so rich and so ragged, were hardly ever seen before.

The ship was now pretty well manned: for the brigantine carried the gunner and his twenty-one men on board her; and the tide by this time being spent, she immediately unmoored, and loosed her topsails, which, as it happened, had been bent to the yards two days before; so with the first of the ebb she weighed, and fell down about a league farther, by which she was quite out of reach of the platform, and rid in the open sea; and the brigantine did the same.

But by this means, they missed the occasion of the rest of the gunner's men, who, having got together to the number of between seventy and eighty, had followed him, and come down to the shore, and made the signals, but were not understood by our ship, which put the poor men to great difficulties; for they had broken away from the rest by force,

and had been pursued half a mile by the whole body, particularly at the entrance into a very thick woody place, and were so hard put to it, that they were obliged to make a desperate stand, and fire at their old friends, which had exasperated them to the last degree. But, as the ease of these men was desperate, they took an effectual method for their own security, of which I shall give a farther account presently.

The general body of the pirates were now up in arms, and the new ship was, as it were, in open war with them, or at least they had declared war against her: but as they had been disappointed in their attempt to force her, and found they were not strong enough at sea to attack her, they sent a flag of truce on board. Our men admitted them to come to the ship's side; but as my mate, who now had the command, knew them to be a gang of desperate rogues, that would attempt anything, though ever so rash, he ordered that none of them should come on board the ship, except the officer and two more, who gave an account that they were sent to treat with us; so we called them the ambassadors.

When they came on board, they expostulated very warmly with my new agent, the second mate, that our men came in the posture of friends, and of friends too in distress, and had received favours from them, but had abused the kindness which had been shown them; that they had bought a ship of them, and had had leave and assistance to fit her up and furnish her; but had not paid for her, or paid for what assistance and what provisions had been given to them: and that now, to complete all, their men had been partially and unfairly treated; and when a certain number of men had been granted us, an inferior fellow, a gunner, was set to call such and such men out, just whom he pleased, to go with us; whereas the whole body ought to have had the appointing whom they would or would not give leave to, to go in the ship: that, when they came in a peaceable manner to have demanded justice, and to have treated amicably of these things, our men had denied them admittance, had committed hostilities against them, had fired at their men, and staved their boat, and had afterward received their deserters on board, all contrary to the rules of friendship. And in all these cases they demanded satisfaction.

Our new commander was a ready man enough, and he

answered all their complaints with a great deal of gravity and calmness. He told them, that it was true we came to them as friends, and had received friendly usage from them, which we had not in the least dishonoured; but that as friends in distress, we had never pretended to be, and really were not; for that we were neither in danger of anything, or in want of anything; that as to provisions, we were strong enough if need were, to procure ourselves provisions in any part of the island, and had been several times supplied from the shore by the natives, for which we had always fully satisfied the people who furnished us; and that we scorned to be ungrateful for any favour we should have received, much less to abuse it, or them for it.

That we had paid the full price of all the provisions we had received, and for the work that had been done to the ship; that what we had bargained for, as the price of the ship, had been paid, as far as the agreement made it due, and that what remained, was ready to be paid as soon as the ship was finished, which was our contract.

That as to the people who were willing to take service with us, and enter themselves on board, it is true that the gunner and some other men offered themselves to us, and we had accepted of them, and we thought it was our part to accept or not to accept of such men as we thought fit. As for what was among themselves, that we had nothing to do with: that, if we had been publicly warned by them not to have entertained any of their men, but with consent of the whole body, then indeed we should have had reason to be cautious; otherwise, we were not in the least concerned about it. That it is true, we refused to let their boats come on board us, being assured that they came in a hostile manner, either to take away the men by force, which had been entered in our service, or perhaps even to seize the ship itself; and why else was the first boat followed by two more, full of men, armed and prepared to attack us? That we not only came in a friendly manner to them, but resolved to continue in friendship with them, if they thought fit to use us as friends; but that, considering what part of the world we were in, and what their circumstances were, they must allow us to be upon our guard, and not put ourselves in a condition to be used ill.

While he was talking thus with them in the cabin, he had

ordered a can of flip to be made, and given their men in the boat, and every one a dram, but would not suffer them to come on board; however, one or two of them got leave to get in at one of the ports, and got between decks among our men; here they made terrible complaints of their condition, and begged hard to be entertained in our service; they were full of money, and gave twenty or thirty pieces of eight among our men, and by this present prevailed on two men to speak to my mate, who appeared as captain, to take the boat's crew on board.

The mate very gravely told the two ambassadors of it, and added, that, seeing they were come with a flag of truce, he would not stop their men without their consent, but the men being so earnest, he thought they would do better not to oppose them. The ambassadors, as I call them, opposed it, however, vehemently, and at last desired to go and talk with the men, which was granted them readily.

When they came into their boat, their men told them plainly, that, one and all, they would enter themselves with their countrymen; that they had been forced already to turn pirates, and they thought they might very justly turn honest men again by force, if they could not get leave to do it peaceably; and that, in short, they would go on shore no more; that, if the ambassadors desired it, they would set them on shore with the boat, but as for themselves, they would go along with the new captain.

When the ambassadors saw this, they had no more to do but to be satisfied, and so were set on shore where they desired, and their men stayed on board.

During this transaction, my mate had sent a full account to me of all that had passed, and had desired me to come on board and give farther directions in all that was to follow; so I took our supercargo and Captain Merlotte along with me, and some more of our officers, and went to them. It was my lot to come on board just when the aforesaid ambassadors were talking with my mate, so I heard most of what they had to say, and heard the answer my mate gave them, as above, which was extremely to my satisfaction; nor did I interrupt him, or take upon me any authority, though he would very submissively have had me shown myself as captain, but I bade him go on, and sat down, as not concerned in the affair at all.

After the ambassadors were gone, the first thing I did, was, in the presenee of all the company, and, having before had the opinion of those I brought with me, to tell my second mate how well we were all satisfied with his conduct, and to declare him captain of the ship that he was in ; only demanding his solemn oath, to be under orders of the great ship, as admiral, and to carry on no separate intercests from us ; which he thankfully aaccepted, and, to give him his due, as faithfully performed, all the rest of our very long voyage, and through all our adventures.

It was upon my seeming intereession, that he gave consent to the boat's eward, who brought the ambassadors, to remain in our serviee, and set their statesmen on shore ; and in the end, I told him that as far as about one hundred and fifty, or two hundred men, he should entertain whom he thought fit. Thus having settled all things in the ship to our satisfaction, we went baek to our great ship the next day.

I had not been many hours on board, till I was surprised with the firing of three muskets from the shore ; we wondered what could be the meaning of it, knowing that it was an unusual thing in that place, where we knew the natives of the eountry had no fire-arms ; so we could not tell what to make of it, and therefore took no notiee, other than, as I say, to wonder at it. About half-an-hour after, we heard three muskets more, and still, not knowing anything of the matter, we made them no return to the signal. Some time after three muskets were fired again, but still we took no notice, for we knew nothing of what return was to be made to it.

When night come on, we observed two great fires upon two several hills, on that part of the shore opposite to us, and after that, three rockets were fired, such as they were, for they were badly constructed ; I suppose their gunner was ill provided for such things : but all signified nothing ; we would have made any return to them that had been to be understood, but we knew nothing of any agreed signal ; however, I resolved that I would send a boat on shore, well manned, to learn, if possible, what the meaning of all this was ; and, accordingly, in the morning, I sent our long-boat and shallop on shore, with two-and-thirty men in them both, to get intelligenee ; ordering them, if possible, to speak with somebody, before they went on shore, and know how things stood ; that then, if it was a party of the pirates, they should

by no means come near them, but parley at a distance, till they knew the meaning of their behaviour.

As soon as my men came near the shore, they saw plainly that it was a body of above a hundred of the pirates; but seeing them so strong, they stood off, and would not come nearer, nor near enough to parley with them; upon this, the men on shore got one of the islanders' canvass boats, or rather boats made of skins, which are but sorry ones at best, and put off, with two men to manage the sail, and one sitter, and two paddles for oars and away they came towards us, carrying a flag of truce, that is to say, an old white rag; how they came to save so much linen among them all, was very hard to guess.

Our men could do no less than receive their ambassador, and a flag of truce gave no shadow of apprehension, especially considering the figure they made, and that the men on shore had no other boats to surprise or attack us with; so they lay by upon their oars till they came up, when they soon understood who they were, viz.—that they were the gunner's selected men; that they came too late to have their signal perceived from the other ship, which was gone out of sight of the place they were directed to; that they had with great difficulty, and five days and nights' marching, got through a woody and almost impassable country to come at us; that they had fetched a circuit of near a hundred miles to avoid being attacked by their comrades, and that they were pursued by them with their whole body, and therefore they begged to be taken on board; they added, if they should be overtaken by their comrades, they should be all cut in pieces, for that they had broke away from them by force, and moreover had been obliged, at the first of their pursuit, to face about and fire among them, by which they had killed six or seven of them, and wounded others, and that they had sworn they would give them no quarter, if they could come fairly up with them.

Our men told them they must be contented to remain on shore, where they were, for some time, for that they could do nothing till they had been on board, and acquainted their captain with all the particulars; so they came back immediately to me for orders.

As to me, I was a little uneasy at the thoughts of taking them on board; I knew they were a gang of pirates at best,

and what they might do I knew not, but I sent them this message, that though all their tale might be very good for aught I knew, yet that I must take so much time as to send an express to the captain of the other ship, to be informed of the truth of it; and that if he brought a satisfactory answer, I would send for them all on board.

This was very uncomfortable news to them, for they expected to be surrounded every hour by their comrades, from whom they were to look for no merey; however, seeing no remedy, they resolved to march about twenty miles farther south, and lie by in a place near the sea, where we agreed to send to them; concluding that their comrades not finding them near the place where we lay, would not imagine they could be gone farther that way. As they guessed, so it proved, for the pirates came to the shore, where they saw tokens enough of their having been there, but seeing they could not be found, concluded they were all gone on board our ship.

The wind proving contrary, it was no less than four days before our boat came back, so that the poor men were held in great suspense: but when they returned, they brought the gunner with them who had selected those men from all the rest for our new ship; and who, when he came, gave me a long account of them, and what care he had taken to pick them out for our service, delivering me also a letter from my new captain to the same purpose: upon all which concurring circumstances, we concluded to take them on board; so we sent our boats for them, which, at twice, brought them all on board, and very stout young fellows they were.

When they had been on board some days and refreshed themselves, I concluded to send all on board the new ship; but, upon advice, I resolved to send sixty of my own men joined to forty of these, and keep thirty-four of them on board my ship; for their number was just seventy-four, which with the gunner and his twenty-one men, and the sixteen men who came with the worthy ambassadors, and would not go on shore again, made one hundred and twelve men; and, as we all thought, were enough for us, though we took in between forty and fifty more afterwards.

We were now ready to go to sea, and I caused the new ship and the brigantine to come away from the place where they lay, and join us; which they did, and then we unloaded

part of our provisions and ammunition; of which, as I observed at first, we had taken in double quantity; and, having furnished the new ship with a proportion of all things necessary, we prepared for our voyage.

I should here give a long account of a second infernal conspiracy, which my two remaining prisoners had formed among the men, which was to betray the new ship to the pirates; but it is too long a story to relate here; nor did I make it public among the ship's company: but as it was only, as it were, laid down in a scheme, and that they had no opportunity to put it in practice, I thought it was better to make as little noise about it as I could. So I ordered my new captain, for it was he who discovered it to me, to punish them in their own way, and, without taking notice of their new villanies, to set them on shore, and leave them to take their fate with a set of rogues whom they had intended to join with, and whose profession was likely, some time or other, to bring them to the gallows. And thus I was rid of two incorrigible mutineers; what became of them afterwards I never heard.

We were now a little fleet, viz., two large ships and a brigantine, well manned, and furnished with all sorts of necessaries for any voyage or any enterprise that was fit for men in our situation to undertake; and, particularly, here I made a full design of the whole voyage, to be again openly declared to the men, and had them asked, one by one, if they were willing and resolved to undertake it, which they all very cheerfully answered in the affirmative.

Here we had an opportunity to furnish ourselves with a plentiful stock of excellent beef, which, as I said before, we cured with little or no salt, by drying it in the sun; and, I believe, we laid in such a store, that, in all our three vessels, we had near a hundred and fifty tons of it; and it was of excellent use to us, and served us through the whole voyage. There was little else to be had in this place that was fit to be carried to sea; except that, as there was plenty of milk, some of our men, who were more dexterous than others, made several large cheeses; nor were they very far short of English cheese, only that we were but indifferent dairy folks. Our men made some butter also, and salted it to keep, but it grew rank and oily, and was of little use to us.

It was on the 15th of December that we left this place, a

country fruitful, populous, full of cattle, large and excellent good beef, and very fat; and the land able to produce all manner of good things; but the people wild, naked, black, barbarous, perfectly untractable, and insensible of any state of life being better than their own.

We stood away towards the shore of Arabia, till we passed the line, and came into the latitude of 18° north, and then stood away east, and east-by-north, for the English factories of Surat, and the coast of Malabar; not that we had any business there, or designed any, only that we had a mind to take on board a quantity of rice, if we could come at it; which at last, we effected by a Portuguese vessel, which we met with at sea, bound to Goa, from the Gulf of Persia. We chased her, and brought her too, indeed, as if we resolved to attack and take the ship; but, finding a quantity of rice on board, which was what we wanted, with a parcel of coffee, we took all the rice, but paid the supercargo, who was a Persian or Armenian merchant, very honestly for the whole parcel, his full price, and to his satisfaction; as for the coffee, we had no occasion for it. We put in at several ports on the Indian coast for fresh water and fresh provisions, but came near none of the factories, because we had no mind to discover ourselves; for though we were to sail through the very centre of the India trade, yet it was perfectly without any business among them. We met indeed on this coast with some pearl fishers, who had been in the mouth of the Arabian Gulf, and had a large quantity of pearl on board. I would have traded with them for goods, but they understood nothing but money, and I refused to part with it; upon which the fellows gave our supercargo some scornful language, which though he did not well understand what they said, yet he pretended to take it as a great affront, and threatened to make prize of their barks, and slaves of the men; upon which they grew very humble; and one of them, a Malabar Indian, who spoke a little English, spoke for them, that they would willingly trade with us for such goods as we had; whereupon I produced three bales of English cloth, which I showed them, and said they would be of good merchandise at Gombroon in the Gulf, for that the Persians made their long vests of such cloths.

In short, for this cloth, and some money, we bought a box of choice pearls, which the chief of them had picked out

from the rest for the Portuguese merchants at Goa; and which, when I came to London, was valued at two thousand two hundred pounds sterling.

We were near two months on our voyage from Madagascar to the coast of India, and from thence to Ceylon, where we put in on the south-west part of the island, to see what provisions we could get, and to take in a large supply of water.

The people here we found willing to supply us with provisions; but withal so sharp, imposing upon us their own rates for everything, and withal, so false, that we were often provoked to treat them very rudely. However, I gave strict orders that they should not be hurt upon any occasion, at least till we had filled all our water-casks and taken in what fresh provisions we could get, and especially rice, which we valued very much. But they provoked us at last beyond all patience; for they were such thieves when they were on board, and such treacherous rogues when we were on shore, that there was no bearing with them; and two accidents fell out upon this occasion which fully broke the peace between us; one was on board, and the other on shore, and both happened the same day.

The case on board was this. There came on board us a small boat, in which were eleven men and three boys, to sell us roots, yams, mangoes, and such other articles as was frequent for them to do every day; but this boat having more goods of that kind than usual, they were longer than ordinary in making their market. While they were thus chaffering on board, one of them having wandered about the ship, and pretending to admire everything he saw, and being gotten between decks, was taken stealing a pair of shoes which belonged to one of the seamen. The fellow being stopped for his theft, appeared angry, raised a hideous screaming noise to alarm his fellows; and, at the same time, having stolen a long pair of scissors, pulled them out, and stabbed the man who had laid hold of him into the shoulder, and was going to repeat his blow, when the poor fellow who had been wounded, having struck up his heels and fallen upon him, had killed him if I had not called to take him off, and bring the thief up to me.

Upon this order, they laid hold of the barbarian, and brought him up with the shoes and the seissors that he had

stolen, and as the fact was plain, and needed no witnesses, I caused all the rest of them to be brought up also ; and, as well as we could, made them understand what he had done.

They made pitiful signs of fear, lest they should all be punished for his crime, and particularly when they saw the man whom he had wounded brought in ; then they expected nothing but death, and they made a sad lamentation and howling, as if they were all to die immediately.

It was not without a great deal of difficulty that I found ways to satisfy them, that nobody was to be punished but the man that had committed the fact ; and then I caused him to be brought to the gears, with a halter about his neck, and be soundly whipped ; and indeed, our people did scourge him severely from head to foot ; and, I believe, if I had not run myself to put an end to it, they would have whipped him to death.

When this punishment was over, they put him into their boat, and let them all go on shore. But no sooner were they on shore, but they raised a terrible outcry in all the villages and towns near them, and they were not a few, the country being very populous ; and great numbers came down to the shore, staring at us, and making confused ugly noises, and abundance of arrows they shot at the ship, but we rode too far from the shore for them to do us any hurt.

While this was doing, another fray happened on shore, where two of our men, bargaining with an islander and his wife for some fowls, they took their money and gave them part of the fowls, and pretended the woman should go and fetch the rest. While the woman was gone, three or four fellows came to the man who was left ; when talking a while together, and seeing our men were but two, they began to take hold of the fowls which had been sold, and would take them away again ; when one of our men stepped up to the fellow who had taken them, and went to lay hold of him, but he was too nimble for him, and ran away, and carried off the fowls and the money too. The seamen were so enraged to be so served, that they took up their pieces, for they had both fire-arms with them, and fired immediately after him, and aimed their shot so well, that though the fellow flew like the wind, he shot him through the head, and he dropped down dead upon the spot.

The rest of them, though terribly frightened, yet, seeing

our men were but two, and the noise bringing twenty or thirty more immediately to them, attacked our men with their pikes, and bows and arrows; and in a moment there was a pitched battle of two men only against twenty or thirty, and their number increasing too.

In short, our men spent their shot freely among them as long as it lasted, and killed six or seven, besides wounding ten or eleven more, and this cooled their courage, and they seemed to give over the battle; and our men, whose ammunition was almost spent, began to think of retreating to their boat, which was near a mile off, for they were very unhappily gotten from their boat so far up the country.

They made their retreat pretty well for about half the way, when, on a sudden, they saw they were not pursued only, but surrounded, and that some of their enemies were before them. This made them double their pace, and, seeing no remedy, they resolved to break through those that were before them, who were about eleven or twelve. Accordingly, as soon as they came within pistol shot of them, one of our men having, for want of shot, put almost a handful of gravel and small stones into his piece, fired among them, and the gravel and stones scattering, wounded almost all of them; for they being naked from the waist upwards, the least grain of sand scratched and hurt them, and made them bleed if it only entered the skin.

Being thus completely seared, and indeed more afraid than hurt, they all ran away, except two, who were really wounded with the shot or stones, and lay upon the ground. Our men let them lie, and made the best of their way to their boat; where, at last, they got safe, but with a great number of the people at their heels. Our men did not stay to fire from the boat, but put off with all the speed they could, for fear of poisoned arrows, and the country people poured so many of their arrows into the boat after them, and aimed them also so truly, that two of our men were hurt with them; but, whether they were poisoned or not, our surgeons cured them both.

We had enough of Ceylon; and having no business to make such a kind of war as this must have been, in which we might have lost but could get nothing, we weighed, and stood away to the East. What became of the fellow that was lashed we knew not; but, as he had but little flesh left

on his back, which was not mangled and torn with our whipping him, and we supposed they were but indifferent surgeons, our people said the fellow could not live; and the reason they gave for it was, because they did not pickle him after it. Truly, they said, that they would not be so kind to him as to pickle him: for though pickling, that is to say, throwing salt and vinegar on the back after the whipping, is cruel enough as to the pain it is to the patient, yet it is certainly the way to prevent mortification, and causes it to heal again with more ease.

We stood over from Ceylon east-south-east cross the great Bay of Bengal, leaving all the coast of Coromandel, and standing directly for Achen, on the north point of the great island of Sumatra, and in the latitude of $6^{\circ} 31'$ north.

Here we spread our French colours, and, coming to an anchor, suffered none of our men to go on shore but Captain Merlotte and his Frenchmen; and, having nothing to do there, or anywhere else in the Indian seas, but to take in provisions and fresh water, we stayed but five days; in which time we supplied ourselves with what the place would afford; and, pretending to be bound for China, we went on to the south through the straits of Malacca, between the island of Sumatra and the main or isthmus of Malacca.

We had here a very difficult passage, though we took two pilots on board at Achen, who pretended to know the straits perfectly well; twice we were in very great danger of being lost, and once our Madagascar ship was so entangled among rocks and currents, that we gave her up for lost, and twice she struck upon the rocks, but she did but touch, and went clear.

We went several times on shore among the Malayans, as well on the shore of Malacca itself, as on the side of Sumatra. They are as fierce, cruel, treacherous, and merciless a crew of human devils as any I have met with on the face of the whole earth; and we had some skirmishes with them, but not of any consequence. We made no stay anywhere in this strait but just for fresh water, and what other fresh provisions we could get, such as roots, greens, hogs, and fowls, of which they have plenty and a great variety: but nothing to be had but for ready money; which our men took so unkindly, and especially their offering two or three times to cheat them, and once to murder them, that afterwards they

made no scruple to go on shore a hundred or more at a time, and plunder and burn what they could not carry off; till at last we began to be such a terror to them, that they fled from us wherever we came.

On the 5th of March we made the southernmost part of the Isthmus of Malacca, and the island and straits of Sineapora, famous for its being the great outlet into the Chinese sea, and lying in the latitude of $1^{\circ} 15'$ north latitude.

We had good weather through these straits, which was very much to our comfort; the different currents and number of little islands making it otherwise very dangerous, especially to strangers. We got, by very good luck, a Dutch pilot to carry us through this strait, who was a very useful, skilful fellow, but withal so impertinent and inquisitive, that we knew not what to say to him nor what to do with him; at last he grew sauey and insolent, and told our chief mate that he did not know but we might be pirates, or at least enemies to his countrymen the Dutch; and if we would not tell him who we were and whither we were bound, he would not pilot us any farther.

This I thought very insolent, to a degree beyond what was sufferable; and bade the boatswain put a halter about the fellow's neck, and tell him that, the moment he omitted to direct the steerage as a pilot, or the moment the ship came to any misfortune, or struck upon any rock, he should be hung up.

The boatswain, a rugged fellow, provided himself with a halter, and coming up to the pilot, asked him what it was he wanted to be satisfied in?

The pilot said he desired to have a true account whither we were going.

Why, says the boatswain, we are agoing to the devil, and I shall send you before to tell him we are coming; and with that he pulled the halter out of his pocket and put it over his head, and taking the other end in his hand, Come, says the boatswain, come along with me; do you think we can't go through the strait of Sineapora without your help? I warrant you, says he, we will do without you.

By this time it may be supposed the Dutchman was in a mortal fright, and half choked too with being dragged by the throat with the halter, and, full heartily he begged for his life: at length the boatswain, who had pulled him along a good way,

stopped and the Dutchman fell down on his knees ; but the boatswain said, he had the captain's orders to hang him, and hang him he would, unless the captain recalled his orders ; but that he would stay so long, if anybody would go up to the captain and tell him what the Dutchman said, and bring back an answer.

I had no design to hang the poor fellow, it is true, and the boatswain knew that well enough. However, I was resolved to humble him effectually, so I sent back two men to the boatswain, the first was to tell the boatswain aloud that the captain was resolved to have the fellow hanged, for having been so impudent to threaten to run the ship aground ; but then the second, who was to stay a little behind, was to call out, as if he came since the first from me, and that I had been prevailed with to pardon him, on his promises of better behaviour. This was all acted to admiration ; for the first messenger called aloud to the boatswain, that the captain said he would have the Dutchman hanged for a warning to all pilots, and to teach them not to insult men when they are in difficulties, as the midwives do whores in labour, and will not deliver them till they confess who is the father.

The boatswain had the end of the halter in his hand all the while ; I told you so, says he, before. Come, come along Mynheer, I shall quickly do your work, and put you out of your pain ; and then he dragged the poor fellow along to the main-mast. By this time the second messenger came in, and delivered his part of the errand, and so the poor Dutchman was put out of his fright, and they gave him a dram to restore him a little, and he did his business very honestly afterwards.

And now we were at liberty again, being in the open sea, which was what we were very impatient for before. We made a long run over that part which we call the sea of Borneo, and the upper part of the Indian Arches, called so from its being full of islands, like the Archipelago of the Levant. It was a long run, but, as we were to the north of the islands, we had the more sea-room ; so we steered east half a point, one way or other, for the Manillas, or Philippine Islands, which was the true design of our voyage ; and, perhaps, we were the first ship that ever came to those islands, freighted from Europe, since the Portuguese lost their footing there.

We put in on the north coast of Borneo for fresh water, and were civilly used by the inhabitants of the place, who brought us roots and fruits of several kinds, and some goats, which we were glad of: we paid them in trifles, such as knives, scissors, toys, and several sorts of wrought iron, hatchets, hammers, glass-work, looking-glasses, and drinking-glasses; and from hence we went away, as I said, for the Philippine Islands.

We saw several islands in our way, but made no stop, except once for water, and arrived at Manilla the 22nd of May, all our vessels in very good condition, our men healthy, and our ships sound; having met with very few contrary winds, and not one storm in the whole voyage from Madagascar. We had now been seventeen months and two days on our voyage from England.

When we arrived, we saluted the Spanish flag, and came to an anchor, carrying French colours. Captain Merlotte, who now acted as commander, sent his boat on shore the next day to the governor, with a respectful letter in French; telling him that, having the King of France's commission, and being come into those seas, he hoped that, for the friendship which was between their most Christian and catholic majesties, he should be allowed the freedom of commerce and the use of the port; the like having been granted to his most Christian majesty's subjects in all the ports of new Spain, as well in the southern as in the northern seas.

The Spanish governor returned a very civil and obliging answer, and immediately permitted us to buy what provisions we pleased for our supply, or anything else for our use; but added, that, as for allowing any exchange of merchandises, or giving leave for European goods to be brought on shore there, he was not empowered to grant.

We made it appear as if this answer was satisfactory; and the next morning Captain Merlotte sent his boat on shore with all French sailors and a French midshipman, with a handsome present to the governor, consisting of some bottles of French wines, some brandy, two pieces of fine Holland, two pieces of English black baize, one piece of fine French drugget, and five yards of scarlet woollen-cloth.

This was too considerable a present for a Spaniard to refuse; and yet these were all European goods, which he

seemed not to allow to come on shore. The governor let the captain know that he accepted his present; and the men who brought it were very handsomely entertained by the governor's order, and had every one a small piece of gold; and the officer who went at their head had five pieces of gold given him: what coin it was I could not tell, but I think it was a Japan coin, and the value something less than a pistole.

The next day the governor sent a gentleman with a large boat, and in it a present to our captain, consisting of two cows, ten sheep, or goats, for they were between both; a number of fowls of several sorts, and twelve great boxes of sweetmeats and conserves; all of which were indeed very acceptable; and invited the captain and any of his attendants on shore, offering to send hostages on board for our safe return; and concluding with his word of honour for our safety, and free going back to our ships.

The captain received the present with very great respect, and indeed it was a very noble present; for at the same time a boat was sent to both the other ships with provisions and sweetmeats, in proportion to the size of the vessels. Our captain caused the gentleman who came with this present, to have a fine piece of crimson English cloth given him, sufficient to make a waistcoat and breeches of their fashion, with a very good hat, two pair of silk stockings, and two pair of gloves: and all his people had a piece of drugget given them sufficient to make the like suit of clothes; the persons who went to the other ship, and to the brigantine, had presents in proportion.

This, in short, was neither more nor less than trading and bartering, though, from supereilious punctilio, we had in a manner been denied it.

The next day the captain went on shore to visit the governor, and with him several of our officers; and the captain of the Madagasear ship, formerly my second mate, and the captain of the brigantine. I did not go myself for that time, nor the supercargo, because, whatever might happen, I would be reserved on board; besides, I did not care to appear in this part of the business.

The captain went on shore like a captain, attended with his two trumpeters, and the ship firing eleven guns at his going off. The governor received him like himself, with prodigious state and formality; sending five gentlemen and

a guard of soldiers to receive him and his men at their landing, and to conduct them to his palace.

When they came there they were entertained with the utmost profusion and magnificence, after the Spanish manner; and they all had the honour to dine with his excellence; that is to say, all the officers. At the same time the men were entertained very handsomely in another house, and had very good cheer; but it was observed that they had but very little wine, except such as we had sent them, which the governor apologised for, by saying his store, which he had yearly from New Spain, was nearly spent. This deficiency we supplied the next day by sending him a quarter cask of very good Canary, and half a hogshead of Madeira; which was a present so acceptable, that, in short, after this, we might do just as we pleased with him and all his men.

While they were thus conversing together after dinner, Captain Merlotte was made to understand, that though the governor could not admit an open avowed trade, yet that the merchants would not be forbid coming on board our ship, and trading with us in such manner as we should be very well satisfied with; after which, we should be at no hazard of getting the goods we should sell put on shore; and we had an experiment of this made in a few days, as follows:

When Captain Merlotte took his leave of the governor, he invited his excellence to come on board our ship, with such of his attendants as he pleased to bring with him, and in like manner offered hostages for his return. The governor accepted the invitation, and with the same generosity, said he would take his parole of honour given, as he was the King of France's captain, and would come on board.

The governor did not come to the shore side with our people; but stood in the window of the palace, and gave them the compliment of his hat and leg at their going into their boats, and made a signal to the platform, to fire eleven guns at their boats putting off.

These were unusual and unexpected honours to us, who, but for this stratagem of the French commission, had been declared enemies. It was suggested to me here, that I might with great ease surprise the whole island, nay, all the islands, the governor putting such confidence in us, that we might go on shore in the very fort unsuspected. But though this was true, and that we did play them a trick at the Rio de la Plata,

I could not bear the thoughts of it here; besides, I had quite another game to play, which would turn out more advantageous to us and to our voyage, than an enterprise of so much treachery could be to England, which also we might not be able to support from thence, before the Spaniards might beat us out again from Acapulco, and then we might pass our time ill enough.

Upon the whole, I resolved to keep every punctilio with the governor very justly, and we found our account in it presently.

About three days afterwards we had notice that the governor would pay us a visit, and we prepared to entertain his excellence with as much state as possible. By the way, we had private notice that the governor would bring with him some merchants, who, perhaps, might lay out some money, and buy some of our cargo; nor was it without a secret intimation that even the governor himself was concerned in the market that should be made.

Upon this intelligence, our supercargo caused several bales of English and French goods to be brought up and opened, and laid so in the steerage and upon the quarter-deck of the ship, that the governor and his attendants should see them of course as they passed by.

When the boats came off from the shore, which we knew by their fort firing eleven guns, our ship appeared as fine as we could make her, having the French flag at the main-top, as admiral, and streamers and pendants at the yard-arms, waste cloths out, and a very fine awning over the quarter-deck. When his excellency entered the ship, we fired one-and-twenty guns, the Madagascar ship fired the like number, and the brigantine fifteen, having loaded her guns nimbly enough to fire twice.

As the governor's entertainment to us was more meat than liquor, so we gave him more liquor than meat; for, as we had several sorts of very good wines on board, we spared nothing to let him see he was very welcome. After dinner we brought a large bowl of punch upon the table, a liquor he was a stranger to: however, to do him justice, he drank very moderately, and so did most of those that were with him. As to the men that belonged to his retinue, I mean servants and attendants, and the crews of the boats, we made some of them drunk enough.

While this was doing, two gentlemen of the governor's company took occasion to leave the rest and walk about the ship; and, in so doing, they seemed, as it were by chance, to cast their eyes upon our bales of cloth and stuffs, baize, linen, silks, &c., and our supercargo and they began to make bargains apace, for he found they had not only money enough, but had abundance of other things which we were as willing to take as money, and of which they had brought specimens with them; as particularly spices, such as cloves and nutmegs; also China ware, tea, japanned ware, wrought silks, raw silk, and the like.

However, our supercargo dealt with them at present for nothing but ready money, and they paid all in gold: the price he made here, was to us indeed extravagant, though to them moderate, seeing they had been used to buy these goods from the Acapulco ships, which came in yearly, from whom to be sure they bought them dear enough. They bought as many goods at this time as they paid the value of fifteen thousand pieces of eight for, but all in gold by weight.

As for carrying our goods on shore, the governor, being present, no officer had anything to say to them; so they were carried on shore as presents, made by us to the governor and his retinue.

The next day three Spanish merchants came on board us, early in the morning, before it was light, and desired to see the supercargo. They brought with them a box of diamonds and some pearl, and a great quantity of gold, and to work they went with our cargo, and I thought once they would have bought the whole ship's loading; but they contented themselves to buy about the value of two-and-twenty thousand pieces of eight, which did not cost, in England, one-sixth part of the money.

We had some difficulty about the diamonds, because we did not understand the worth of them, but our supercargo ventured upon them at ten thousand pieces of eight, and took the rest in gold. They desired to stay on board till the next night, when, soon after it was dark, a small sloop came on board and took in all their goods, and, as we were told, carried them away to some other island.

The same day, and before these merchants were gone, came a large shallop on board with a square sail, towing after her a great heavy boat, which had a deck, but

seemed to have been a large ship's long-boat, built into a kind of yacht, but ill masted, and sailed heavily. In these two boats they brought seven tons of cloves in mats, some chests of China ware, some pieces of China silks, of several sorts, and a great sum of money also.

In short, the merchants sold so cheap and bought so dear, that our supercargo declared he would sell the whole cargo for goods, if they would bring them, for, by his calculation, he had disposed of as many goods as he received the value of one hundred thousand pieces of eight for, all which, by his accounts, did not amount to, first cost, above three thousand pounds sterling in England.

Our ship was now an open fair; for, two or three days after, came the vessel back which went away in the night, and with them a Chinese junk, and seven or eight Chinese or Japanners; strange, ugly, ill-looking fellows they were, but brought a Spaniard to be their interpreter, and they came to trade also, bringing with them seventy great chests of China ware exceeding fine, twelve chests of China silks of several sorts, and some lackered cabinets, very fine. We dealt with them for all those, for our supercargo left nothing, he took everything they brought. Our traders were more difficult to please than we: for as for baize and druggets, and such goods, they would not meddle with them; but our fine cloths and some bales of linen they bought very freely. So we unloaded their vessel and put our goods on board. We took a good sum of money of them besides; but whither they went we knew not, for they both came and went in the night too, as the other did.

This trade held a good while, and we found that our customers came more from other islands than from the island where the governor resided; the reason of which, as we understood afterwards, was, because, as the governor had not openly granted a freedom of commerce, but privately winked at it, so they were not willing to carry it on openly before his face, or, as we say, under his nose; whereas, in other islands, they could convey their goods on shore with very little hazard, agreeing with the custom-house officer for a small matter.

These boats came and went thus several times, till, in short, we had disposed almost of the whole cargo; and now our men began to be convinced that we had laid out our

voyage very right, for never was cargo better sold; and, as we resolved to pursue our voyage for New Spain, we had taken in a cargo very proper to sell there, and so, perhaps, to double the advantage we had already made.

In the mean time, all our hands were at work to store ourselves anew, with such provisions as could be had here for so long a run as we knew we were to have next; namely, over the vast Pacific Ocean, or South Sea, a voyage where we might expect to see no land for four months, except we touched at the Ladrões, as it might happen; and our greatest anxiety was for want of water, which our whole ship could scarce be able to stow sufficient for our use; and our want of casks was still as bad as the want of water, for we really knew not what to put water in when we had it.

The Spaniards had helped us to some casks, but not many; those that they could spare were but small, and at last we were obliged to make use of about two hundred large earthen jars, which were of singular use to us. We got a large quantity of good rice here, which we bought of a Chinese merchant, who came in here with a large China vessel to trade, who bought of us also several of our European goods.

Just as we were ready to sail, a boat came from the town of Manilla, and brought a new merchant, who wanted more English goods, but we had but few left; he brought with him thirty chests of calicoes, muslins, wrought silks, some of them admirably fine indeed, with fifteen bales of romals, and twelve tons of nutmegs. We sold him what goods we had left, and gave him money for the rest, but had them at a price so cheap, as was sufficient to let us know that it was always well worth while for ships to trade from Europe to the East Indies; from whence they are sure to make five or six of one. Had more of these merchants come on board, we were resolved to have laid out all the gold and silver we had, which was a very considerable quantity.

The last merchant who came on board us was a Spaniard; but I found that he spoke very good French, and some English; that he had been in England some years before, and understood English woollen manufactures very well. He told me he had all his present goods from Acapulco, but that they were then excessively dear. He had considerable dealings with the Chinese, and some with the coast of Coro-

mandel and Bengal, and kept a vessel or two of his own to go to Bengal, which generally went twice in a year.

I found he had great business with New Spain, and that he generally had one of the Acapulco ships chiefly consigned to him; so that he was full of all such goods as those ships generally carried away from the Manillas, and, had we traded with him sooner, we should have had more calicoes and muslins than we now had; however, we were exceedingly well stored with goods of all sorts, suitable for a market in Peru, whither I resolved to go.

We continued chaffering after this manner about nine weeks, during which time we careened our ships, cleaned their bottoms, rummaged our gold, and repacked some of our provisions; endeavouring, as much as possible, to keep all our men as fully employed as we could, to preserve them in health, and yet not to overwork them, considering the heat of the climate.

Some time before we were ready to sail, I called all the warrant officers together, and told them, that as we were come to a country where abundance of small things were to be bought, and going to a country where we might possibly have an opportunity to sell them again to advantage, I would advance to every officer a hundred dollars, upon account of their pay, that they might lay it out here, and dispose of it again on the coast of New Spain to advantage. This was very acceptable to them, and they acknowledged it; and here, besides this, by the consent of all our superior officers, I gave a largess or bounty of five dollars a man, to all our foremast men; most of which I believe they laid out in arrack and sugar, to cheer them up in the rest of the voyage, which they all knew would be long enough.

We went away from Manilla, in the island of Luconia, the 15th of August, 1714; and, sailing awhile to the southward, passed the Straits between that island and Mindora, another of the Philippines, where we met with little extraordinary, except extraordinary lightning and thunders, such as we never heard or saw before, though, it seems, it is very familiar in that climate; till, after sixteen days' sailing, we saw the isle of Guam, one of the Ladrões, or Islands of Thieves, for so much the word imports; here we came to an anchor, Sept. 3, under the lee of a steep shore, on the north side of the isle of Guam; but, as we wanted no trade here,

we did not at first inquire after the chief port, or Spanish governor, or anything of that kind; but we changed our situation the next day, and went through the passage to the east side of the island, and came to an anchor near the town.

The people came off, and brought us hogs and fowls, and several sorts of roots and greens, articles which we were very glad of, and which we bought the more of because we always found that such things were good to keep the men from the scurvy, and even to cure them of it if they had it. We took in fresh water here also, though it was with some difficulty, the water lying half a mile from the shore.

When I parted from Manilla, and was getting through the Strait between the island of Luconia and that of Mindora, I had some thoughts of steering away north, to try what land we might meet with to the north-east of the Philippines; and with intent to have endeavoured to make up into the latitude of 50 or 60°, and have come about again to the south, between the island of California and the mainland of America; in which course, I did not question meeting with extraordinary new discoveries, and, perhaps, such as the age might not expect to hear of, relating to the northern world, and the possibility of a passage out of those seas, either east or west, both which, I doubt not, would be found, if they were searched after this way; and which, for aught I know, remain undiscovered for want only of an attempt being made by those seas, where it would be easy to find whether the Tartarian seas are navigable or not; and whether Nova Zembla be an island or joined to the main; whether the inlets of Hudson's Bay have any opening into the West Sea; and whether the vast lakes, from whence the great river of Canada is said to flow, have any communication this way or not.

But though these were valuable discoveries, yet, when I began to cast up the account in a more serious manner, they appeared to have no relation to, or coherence with, our intended voyage, or with the design of our employers, which we were to consider in the first place, for though it is true that we were encouraged to make all such kinds of useful discoveries as might tend to the advantage of trade, and the improvement of geographical knowledge and experience, yet it was all to be so directed as to be subservient to the profits and advantages of a trading and cruising voyage.

It is true that these northern discoveries might be infinitely great, and most glorious to the British nation, by opening new sources of wealth and commerce in general: yet, as I have said, it was evident that they tended directly to destroy the voyage, either as to trading or to cruising, and might perhaps end in our own destruction also. For example, first of all, if adventuring into those northern seas, we should, by our industry, make out the discovery, and find a passage, either east or west, we must follow the discovery so as to venture quite through, or else we could not be sure that it was really a discovery; for these passages would not be like doubling Cape de Bon Esperance, on the point of Africa, or going round Cape Horn, the southernmost point of America, either of which were compassed in a few days, and then immediately gave an opening into the Indian or Southern Oceans, where good weather and certain refreshment were to be had.

Whereas, for the discovery in the north, after having passed the northernmost land of Grand Tartary, in the latitude of 74° even to 80° , and perhaps to the very north pole, there must be a run west, beyond the most northerly point of Nova Zembla, and on again west-south-west, about the North Kyn and North Cape, about six hundred leagues, before we could come to have any relief of the climate; after that, one hundred and sixty leagues more, and even to Shetland and the north of Scotland, before we could meet with any relief of provisions, which, after the length we must have run, from the latitude of $3\frac{1}{2}^{\circ}$, where we now were at the Philippine Islands, to 74° north, being near five thousand miles, would be impossible to be done, unless we were sure to victual, and furnish ourselves again with provisions and water by the way, and that in several places.

As to the other passage east, towards the continent of America, we had this uncertainty also; namely, that it was not yet discovered whether the land of California was an island or a continent, and if it should prove the latter, so as that we should be obliged to come back to the west, and not be able to find an opening between California and the land of north America, so as to come away to the coast of Mexico, to Acapulco, and so into the South Sea, and at the same time should not find a passage through Hudson's Bay, &c., into the North Sea, and so to Europe, we should not only

spoil the voyage that way also, but should infallibly perish by the severity of the season and want of provisions.

All these things argued against any attempt that way; whereas, on the other hand, for southern discoveries, we had this particular encouragement; that whatever disappointment we might meet with, in the search after unknown countries, yet we were sure of an open sea behind us; and that whenever we thought fit to run south beyond the tropic, we should find innumerable islands where we might get water, and some sort of provisions, or come back into a favourable climate, and have the benefit of the trade winds, to carry us either backward or forward, as the season should happen to guide us.

Last of all, we had this assurance, that, the dangers of the seas excepted, we were sure of an outlet before us, if we went forward, or behind us, if we were forced back; and, having a rich cargo, if we were to do nothing but go home, we should be able to give our employers such an account of ourselves, as that they would be very far from being losers by the voyage; but that, if we reached safe the coast of New Spain, and met with an open commerce there, as we expected, we should perhaps make the most prosperous voyage that was ever made round the globe before.

These considerations put an end to all my thoughts of going northward; some of our secret council, (for, by the way, we consulted our foremast men no more, but had a secret council among ourselves, the resolutions of which we solemnly engaged not to disclose); some of these, I say, were for steering the usual course, from the Philippines to New Spain, viz., keeping in the latitudes of 11 or 13° north the line, and so making directly for California; in which latitude they proposed that we might, perhaps, by cruising thereabout, meet with the Manilla ships, going from New Spain to Manilla, which we might take as prizes, and then stand directly for the coast of Peru. But I opposed this, principally because it would effectually overthrow all my meditated discoveries to the southward; and, secondly, because I had observed, that, on the north of the line, there are no islands to be met with, in all the long run of near two thousand leagues, from Guam, one of the Ladrões, to the land of California; and that we did not find we were able to subsist during so long a run, especially for want of water:

whereas, on the south of the line, as well within the tropic as without, we were sure to meet with islands innumerable, and that even all the way; so that we were sure of frequent relief of fresh water, of plants, fowl, and fish, if not of bread and flesh, almost all the way.

This was a main consideration to our men, and so we soon resolved to take the southern course; yet, as I said, we stood away for the Ladrões first. These are a cluster of islands, which lie in about 11 to 13° north latitude, north-east from the Moluccas, or Spice Islands, and east and by north from that part of the Philippines where we were, and at the distance of about four hundred leagues, and all the ships which go or come between the Philippines and New Spain touch at them, for the convenience of provisions, water, &c.; those that go to Spain put in there, in order to recruit and furnish for, and those that come from Spain, to relieve themselves after so long a run as that of six thousand miles, for so much it is at least from Guam to Acapulco; on these accounts, and with these reasonings, we came to the isles of the Ladrões.

During our run between the Philippine and Ladrone islands, we lived wholly upon our fresh provisions, of which we laid in a great stock at Manilla, such as hogs, fowls, calves, and six or seven cows, all alive, so that our English beef and pork, which lay well stored, was not touched for a long time.

At the Ladrões we recruited, and particularly took on board, as well alive as pickled up, near two hundred hogs, with a vast store of roots, and such things as are their usual food in that country. We took in also above three thousand cocoa-nuts and cabbages; yams, potatoes, and other roots, for our own use; and, in particular, we got a large quantity of maize, or Indian wheat, for bread, and some rice.

We stored ourselves likewise with oranges and lemons; and, buying a great quantity of very good limes, we made three or four hogsheads of lime-juice, which was a great relief to our men in the hot season, to mix with their water; as for making punch, we had some arrack and some sugar, but neither of them in such quantity as to have much punch made afore the mast.

We were eighteen days on our passage from the Strait of Mindora to Guam, and stayed six days at the latter, fur-

nishing ourselves with provisions, appearing all this while with French colours, and Captain Merlotte as commander. However we made no great ceremony here with the Spanish governor, as I have said already, only that Captain Merlotte, after we had been here two days, sent a letter to him by a French officer, who, showing his commission from the king of France, the governor presently gave us product, as we call it, and leave to buy what provisions we wanted.

In compliment for this civility, we sent the governor a small present of fine scarlet camlet and two pieces of baize; and he made a very handsome return, in such refreshments as he thought we most wanted.

There was another reason for our keeping in this latitude till we came to the Ladrones; namely, that all the southern side of that part of the way, between the Philippines and the Ladrones, is so full of islands, that, unless we had been provided with very good pilots, it would have been extremely hazardous; and, add to this, that, beyond these islands south, is no passage; the land, which they call Nova Guinea, lying away east and east-south-east, farther than has yet been discovered; so that it is not yet known whether that country be an island or the continent.

Having for all these reasons gone to the Ladrones, and being sufficiently satisfied in our reasons for going away from thence to the southward, and having stored ourselves, as above, with whatever those islands produced, we left the Ladrones the 10th day of September in the evening, and stood away east-south-east, with the wind north-north-west, a fresh gale; after this, I think it was about five days, when, having stretched, by our account, about a hundred and fifty leagues, we steered away more to the southward, our course south-east-by-south.

And now, if ever, I expected to do something by way of discovery. I knew very well there were few, if any, had ever steered that course; or that, if they had, they had given very little account of their travels. The only persons who leave anything worth notice being Cornelius Vanshouten and Francis Le Mare, who, though they sailed very much to the south, yet say little to the purpose, as I shall presently show.

The sixteenth day after we parted from the Ladrones, being, by observation, in the latitude of 17° south of the line,

one of our men cried, A sail! a sail! which put us into some fit of wonder, knowing nothing of a ship of any bulk could be met with in those seas; but our fit of wonder was soon turned to a fit of laughter, when one of our men from the foretop, cried out, Land! which, indeed, was the case; and the first sailor was sufficiently laughed at for his mistake, though, giving him his due, it looked at first as like a sail as ever any land at a distance could look.

Towards evening we made the land very plain, distance about seven leagues south-by-east, and found that it was not an island, but a vast tract of land, extended, as we had reason to believe, from the side of Gilolo, and the Spice Islands, or that which we call Nova Guinea, and never yet fully discovered. The land lying away from the west-north-west to the south-east-by-south, still southerly.

I, that was for making all possible discovery, was willing, besides the convenience of water, and perhaps fresh provisions, to put in here, and see what kind of country it was; so I ordered the brigantine to stand in for the shore. They sounded, but found no ground within half a league of the shore; so they hoisted out their boat, and went close in with the shore, where they found good anchor-hold in about thirty-six fathom, and a large creek, or mouth of a river; here they found eleven to thirteen fathom soft oozy sand, and the water half fresh at the mouth of the creek.

Upon notice of this, we stood in, and came all to an anchor in the very creek; and, sending our boats up the creek, found the water perfectly fresh and very good upon the cbb, about a league up the river.

Among all the islands in this part of the world, that is to say, from the Philippines eastward, of which there are an infinite number, we never came near any but we found ourselves surrounded with canoes and a variety of boats, bringing off to us cocoa-nuts, plantains, roots, and greens, to traffic for such things as they could get; and that in such numbers, we were tired with them, and sometimes alarmed, and obliged to fire at them. But here, though we saw great numbers of people at a distance from the shore, yet we saw not one boat or bark, nor anything else upon the water.

We stayed two or three days taking in fresh water, but it was impossible to restrain our men from going on shore, to see what sort of a country it was; and I was very willing

they should do so. Accordingly, two of our boats, with about thirty men in both of them, went on shore on the east side of the creek or harbour where our ship lay.

They found the country looked wild and savage; but, though they could find no houses, or speak with the inhabitants, they saw their footsteps and their seats where they had sat down under some trees; and after wandering about a little, they saw people, both men and women, at a distance; but they ran away from our men, at first sight, like frightened deer; nor could they make any signal to them to be understood; for when our men hallooed and called after them, they ran again as if they had been bewitched.

Our men gathered a great variety of green stuff, though they knew not of what kind, and brought it all on board, and we eat a great deal of it; some we boiled and made broth of, and some of our men, who had the scurvy, found it did them a great deal of good; for the herbs were of a spicy kind, and had a most pleasant agreeable taste: but none of us could tell what to call them, though we had several men on board who had been among the Spice Islands before in Dutch ships.

We were very uneasy that we could get nothing here but a little grass and potherbs, as our men called it, and the men importuned me to let them have two boats, and go up the river as high as the tide would carry them; this I consented to, being as willing to make the discovery as they; so I ordered the captain of the Madagascar ship, who had, as I have said, been formerly my second mate, to go along with them.

But in the morning, a little before the flood was made, I was called out of my cabin to see an army, as they told me, coming to attack us. I turned out hastily enough, as may be easily conjectured, and such an army appeared as no ship was ever attacked with; for we spied three or four hundred black creatures, come playing and tumbling down the stream towards us, like so many porpoises in the water. I was not satisfied at first that they were human creatures, but would have persuaded our men, that they were sea-monsters, or fishes of some strange kind.

But they quickly undeceived us, for they came swimming about our ships, staring and wondering and calling to one another, but said not one word to us, at least, if they did, we could not understand them.

Some of them came very near our ships, and we made signs to them to come on board, but they would not venture. We tossed one of them a rope, and he took hold of it boldly; but as soon as we offered to pull, he let go, and laughed at us; another of them did the like, and when he let go, turned up his black buttocks, as in sport at us; the language of which, in our country, we all knew, but whether it had the same meaning here, we were at a loss to know.

However, this dumb manner of conversing with them we did not like, neither was it to any purpose to us; and I was resolved, if possible, to know something more of them than we could get thus; so I ordered out our pinnace with six oars, and as many other men well armed, to row among them; and, if possible, to take some of them and bring them on board. They went off, but the six-oar pinnace, though a very nimble boat, could not row so fast as they could swim; for, if pulling with all their might, they came near one of them, immediately, like dog and duck, they would dive, and come up again thirty or forty yards off; so that our men did not know which way to row after them; however, at last getting among the thickest of them, they got hold of two, and with some difficulty dragged them in; but think of our surprise, to find they were not men, but both young women. However, they were brought on board naked as they were.

When they came on board, I ordered they should have two pieces of linen wrapped round their waists to cover them, which they seemed well pleased with. We gave them also several strings of beads, and our men tied them about their necks, and about their arms like bracelets, and they were wonderfully delighted with their ornaments. Others of our men gave each of them a pair of scissors, with needles and some thread, and threading the needles, showed them how to sew with them; we also gave them food, and each of them a dram of arrack, and made signs to know of them where they lived; they pointed up to the river, but we could by no means understand them.

When we had dressed them up thus with necklaces, and bracelets, and linen, we brought them up upon the deck, and made them call to their country folk, and let them see how well they were used, and the girls beckoned them to come on board, but they would not venture.

However, as I thought the discovery we were to make,

would be something the easier on account of the usage of these two young women; for they were not, as we guessed, above twenty or two-and-twenty years of age; we resolved that the boat should go on, as we intended, up the river; and that, as the two women pointed that way, we should carry them along with us.

Accordingly we sent two shallops, or large boats, which carried together sixty men, all well armed. We gave them store of beads and knives and scissors, and such baubles with them, with hatchets and nails, and hooks, looking-glasses, and the like; and we built up the sides and sterns of the boats, and covered them with boards, to keep off arrows and darts, if they should find occasion, so that they looked like London barges. In this posture, as soon as the tide or flood was made up, our men went away, carrying a drum and a trumpet in each boat; and each boat had also two patereroes, or small cannon, fixed on the gunnel near the bow.

Thus furnished, they went off about eleven o'clock in the forenoon, and to my very great uneasiness, I heard no more of them for four days. The whole ship's company were indeed surprised at their stay, and the captain of the sloop would fain have had me let him have sailed up the river with the sloop, as far as the channel would serve; which really we found was deep enough. Indeed, as I was unwilling to run any more risks, I could not persuade myself, but that the force I had already sent was sufficient to fight five thousand naked creatures, such as the natives seemed to be, and therefore, I was very unwilling to send. However, I consented at last to have our long-boat and two smaller boats manned with fifty-four men more, very well armed, and covered from arrows and darts as the other had been, to go up the river, upon their solemn promise, and with express order, to return the next day, at farthest; ordering them to fire guns as they went up the river, to give notice to their fellows, if they could be heard, that they were coming; and that, in the mean time, if I fired three guns they should immediately return.

They went away with the tide of flood, a little before noon, and went up the river about five leagues, the tide running but slowly, and a strong fresh of land-water that checked the current coming down; so that when the tide was spent they came to an anchor. They found the river,

contrary to their expectation, continued both deep enough, and was wider in breadth than where the ships were at anchor; and that it had another mouth or outlet into the sea some leagues farther east, so that the land to the east of us, where our men went on shore, was but an island, and had not many inhabitants, if any; the people they had seen there having possibly swam over the other arm or branch of the river, to observe our ships the nearer. As our men found they could go no farther for want of the tide, they resolved to come to an anchor; but, just as they were sounding, to see what ground they had, and what depth, a small breeze at north-east sprang up, by which they stemmed the current and reached up about two leagues farther, when they hove over their grappling in five fathom water, soft ground; so that all this way, and much farther, every one of our ships might have gone up the channel, being as broad as the Thames is about Vauxhall.

It must be observed, that all along this river they found the land, after they came past the place where the other branch of the river broke off, eastward, was full of inhabitants on both sides, who frequently came down to the water-side in haste to look at our boats; but always when our men called to them, as if they thought our men inquired after their fellows, they pointed up the river, which was as much as to say, they were gone farther that way.

However, our men not being able to go any farther against the tide, took no notice of that; but, after a little while some of them, in one of the smaller boats, rowed towards the shore, holding up a white flag to the people in token of friendship; but it was all one, and would have been all one for aught we knew, if they had held up a red flag, for they all ran away, men, women, and children; nor could our men by any persuasions, by gestures and signs of any kind, prevail on them to stay, or hardly so much as to look at them.

The night coming on, our men knew not well what course to take; they saw several of the Indians' dwellings and habitations, but they were all at a distance from the river, occasioned, as our men supposed, by the river's overflowing the flat grounds near its banks, so as to render those lands not habitable.

Our men had a great inclination to have gone up to one of the towns they saw, but he that commanded would not

permit it; but told them, if they could find a good landing-place, that they might all go on shore, except a few to keep the boats, if they chose to venture; upon which the smallest boat rowed up about a mile, and found a small river running into the greater, and here they all resolved to land; but first they fired two muskets, to give notice, if possible, to their comrades, that they were at hand; however, they heard nothing of them.

What impression the noise of the two muskets made among the Indians they could not tell, for they were all run away before.

They were no sooner on shore, but, considering they had not above two hours' day, and that the Indian villages were at least two miles off, they called a council, and resolved not to march so far into a country they knew so little of, and be left to come back in the dark; so they went on board again, and waited till morning. However, they viewed the country, found it was a fertile soil, and a great herbage on the ground; there were few trees near the river; but farther up where the Indian dwellings were, the little hills seemed to be covered with woods, but of what kind they knew not.

In the morning, before break of day, some of our men fancied they heard a gun fired up the river; upon which the officer ordered two muskets to be fired again, as had been done the evening before; and in about a quarter of an hour they were answered by the like firing, by which our men knew that their comrades heard them; so, without pursuing their intended landing, the tide being then running upwards, they weighed, and set to their oars, having little or no wind, and that which they had blowing down the stream.

After they had gone about a league, they heard a confused noise at a great distance, which surprised them a little at first; but, as they perceived it drew nearer and nearer, they waited awhile, when they discovered first here and there some people, then more, and then about two or three hundred men and women together, running, and every one carrying something.

Where it was they were going to, or what it was they carried, our men could not tell till they came nearer, when they found that they were all loaded with provisions, coeca-nuts, roots, cabbages, and a great variety of things which the men knew little of; and all these were carrying

down to our ships, as we understood afterwards, in gratitude for our kind usage of the two young women.

When these people saw our men and their three boats, they were at a full stop, and once or twice they were ready to lay down all their loads, and run for it; but ours made signs of peace, and held up a white flag to them.

Some of them, it seems, having, as we found, conversed with our men, had a little more courage than the rest, and came to the shore side, and looked at the boats. One of our men thought of a stratagem to make known our desire of peace with them. Taking a string of beads and some toys, he held them up at the end of the boat-hook staff, and showed them to the Indians, pointing to them with his hand, and then pointing with the other hand to what the Indians carried, and to his mouth, intimating that we wanted such things to eat, and would give him the beads for them.

One of the Indians presently understood him, and threw himself into the water, holding a bundle of plants, such as he had trussed up together, upon his head, and swimming with the other hand, came so near the boat, where our men held out the staff, as to reach the end of the staff, take off the string of beads and toys, and hang his bunch of trash, for it was not better, upon the hook, and then went back again, for he would come no nearer.

When he was gotten on shore again, all his comrades came about him to see what he had got; he hung the string of beads round his neck, and ran dancing about with the other things in his hand, as if he had been mad.

What our men got was a trifle of less worth than a good bunch of carrots in England, but yet it was useful, as it brought the people to converse with us; for after this they brought us roots and fruits innumerable, and began to be very well acquainted with us.

By that time our men had chattered thus four or five times they first heard, and in a little while after saw, their two great boats, with their fellows, coming down the river, at about two miles' distance, with their drums and trumpets, and making noise enough.

They had been, it seems, about three leagues higher up, where they had been on shore among the Indians, and had set at liberty the two maidens, for such they understood they were; who, letting their friends see how fine they

were dressed, and how well they were used, the Indians were so exceedingly obliged, and showed themselves so grateful, that they thought nothing too much for them, but brought out all the sorts of provisions which their country produced, which, it seem, amounted to nothing but fruits, such as plantains, cocoa-nuts, oranges and lemons, and such things, and roots, which we could give no name to ; but that which was most for our use, was a very good sort of maize, or Indian corn, which made us excellent bread.

They had, it seems, some hogs and some goats ; but our men got only six of the latter, which were at hand, and were very good. But that which was most remarkable was, that whereas in all the islands within the tropics the people are thievish, treacherous, fierce, and mischievous, and are armed with lances, or darts, or bows and arrows ; these appeared to be a peaceable, quiet, inoffensive people ; nor did our men see any weapon among them except a long staff, which most of the men carried in their hands, being made of a cane, about eight foot long, and an inch and a half in diameter, much like a quarter-staff, with which they would leap over small brooks of water with admirable dexterity.

The people were black, or rather of a tawny dark brown ; their hair long, but curling in very handsome ringlets : they went generally quite naked, both men and women ; except that in two places, our men said, they found some of the women covered from the middle downward. They seemed to have been strangers to the sea ; nor did we find so much as any one boat among them : nor did any of the inhabitants dwell near the sea ; but cultivated their lands very well, in their way ; having abundance of greens and fruits growing about their houses ; and upon which we found they chiefly lived. The climate seemed to be very hot, and yet the country very fruitful.

These people, by all we could perceive, had never had any converse with the rest of the world by sea ; what they might have by land we know not ; but, as they lie quite out of the way of all commerce, so it might be probable they never had seen a ship or boat, whether any European ship, or so much as a periagua of the islands. We have mentioned their nearest distance to the Ladrões, being at least four hundred leagues ; and from the Spice Islands, and the country of New Guinea, much more ; but as to the European ship-

ping, I never heard of any that ever went that way, nor do I believe any ever did.

I take the more notice of these people's not having conversed, as I say, with the world, because of the innocence of their behaviour, their peaceable disposition, and their way of living upon the fruits and produce of the earth; also their cultivation, and the manner of their habitations; no signs of rapine or violence appearing among them. Our stay here was so little, that we could make no inquiry into their religion, manner of government, and other customs; nor have I room to crowd many of these things into this account. They went, indeed, as I have said, naked, some of them stark naked, both men and women, but I thought they differed in their countenances from all the wild people I ever saw; that they had something singularly honest and sincere in their faces, nor did we find anything of falsehood or treachery among them.

The gratitude they expressed for our kindly using the two young women I have mentioned, was a token of generous principles; and our men told us, that they would have given them whatever they could have asked, that was in their power to bestow.

In a word, it was on their account they sent that little army of people to us loaden with provisions, which our men met before the two shallows came down. But all the provisions they had consisted chiefly in fruits of the earth, coconuts, plantains, oranges, lemons, &c., and maize, or Indian corn. We were not a sufficient time with them to inquire after what traffick they had, or whether anything fit for us. They had several fragrant plants, and some spices, particularly cinnamon, which we found, but what else the country produced we knew not.

We came away from hence after seven days' stay, having observed little of the country, more than that it seemed to be very pleasant, but very hot; the woods were all flourishing and green and the soil rich, but containing little that could be the subject of trade; but an excellent place to be a bait-land, or port of refreshment, in any voyage that might afterwards be undertaken that way.

We set sail, I say, from hence in seven days, and, finding the coast lie fairly on our starboard side, kept the land on board all the way, distance about three leagues; and it held us thus, about a hundred and twenty leagues due east, when

on a sudden we lost sight of the land; whether it broke off, or whether it only drew off farther south, we could not tell.

We went on two or three days more, our course south-east, when we made land again; but found it only to be two small islands, lying south and by east, distance nine leagues. We stood on to them, and two of our boats went on shore, but found nothing for our purpose; no inhabitants, nor any living creatures, except sea fowls, and some large snakes; neither was there any fresh water. So we called that land Cape Dismal.

The same evening we stood away full south, to see if we could find out the continuance of the former land; but as we found no land, so a great sea coming from the south we concluded we should find no land that way. And, varying our course easterly, we ran with a fair fresh gale at north-west and by west, for seven days more; in all which time, we saw nothing but the open sea every way; and making an observation found we had passed the southern tropic; and that we were in the latitude of $26^{\circ} 13'$, after which we continued our course still southerly for several days more, until we found, by another observation, that we were in $32^{\circ} 20'$.

This evening we made land over our starboard bow, distance six leagues, and stood away south and by east: but the wind slackening we lay by in the night; and in the morning found the land bearing east and by south, distance one league and a half; a good shore, and on sounding, about five-and-thirty fathom, stony ground. We now hoisted our boat out, and sent it on shore for discoveries, to sound the depth of the water, and see for a good harbour to put in at.

Our people went quite in with the shore, where they found several men and women crowded together to look at us. When our men came close to the land they hung out a white flag, but the wild people understood nothing of the meaning of it, but stood looking and amazed, and we have great reason to believe that they never had seen any ship or bark of any nation before. We found on our landing, no boats or sails, or anything they had to make use of on the water; but some days after we saw several small canoes, with three or four men in each.

Our men not being able to speak a word for them to understand, or to know what was said to them, the first thing

they did, was to make signs to them for something to eat; upon which three of them seemed to go away, and coming again in a few minutes, brought with them several bundles or bunches of roots, some plantains, and some green lemons, or limes, and laid down all upon the coast. Our men took courage then to go on shore, and, taking up what they brought, set up a stick, and upon the end of it hung five bunches or strings of blue and white beads, and went on board again.

Never was such joy among a wild people discovered, as these natives showed, when they took the beads off the stick; they danced and capered, and made a thousand antic gestures, and, inviting our men on shore, laid their hands upon their breasts across, and then looked up, intimating a solemn oath not to hurt us.

Our men made signs, by which they made them understand, that they would come again next morning, and also that they should bring us more eatables; accordingly, we sent three boats the next morning, and our men carried knives, scissors, beads, looking-glasses, combs, and any toys they had, not forgetting glass beads and glass ear-rings in abundance.

The Indians were very ready to meet us, and brought us fruits and herbs as before; but three of them, who stood at a distance, held each of them a creature exactly like a goat, but without horns or beard; and these were brought to traffick with us.

We brought out our goods, and offered every one something; but the variety was surprising to them who had never seen such things before. But that which was most valuable of all our things, was a hatchet, which one of their principal men took up and looked at it, felt the edge, and laid it down; then took it up again, and wanted to know the use of it: upon which one of our men took it, and stepping to a tree that stood near, cut off a small bough of it at one blow. The man was surprised, and ran to the tree with it, to see if he could do the same, and finding he could, he laid it down, ran with all his might into the country, and by-and-by returning, came with two men more with him, to show them this wonderful thing, a hatchet.

But if they were surprised with the novelty of a hatchet, our men were as much surprised to see hanging round the ears of both the men that he brought with him, large flat

pieces of pure gold. The thread which they hung by was made of the hair of the goats, twisted very prettily together and very strong.

Our men offering to handle them, to see if they were gold, one of the men took off his two gold bobs, and offered them to our men for the hatchet. Our men seemed to make much difficulty of it, as if the hatchet was of much greater value than those trifles; upon which he, being as we found, superior, made the other, who came with him, pull off his two ear-jewels also; and so our unreasonable people took them all four, being of pure gold, and weighing together some grains above two ounces, in exchange for an old rusty hatchet. However unreasonable the price was, the purchaser did not think it so; and so over-fond was he of the hatchet, that as soon as he had it for his own, he ran to the tree, and in a few minutes had so laid about him with the hatchet, that there was not a twig left on it that was within his reach.

This exchange was a particualar hint to me; and I presently directly my chief mate, and Captain Merlotte, to go on shore the next day, and acquaint themselves as much as they could with the natives, and, if possible, to find out where they had this gold, and if any quantity was to be found.

Captain Merlotte and my chief mate bestowed their time so well, and obliged the natives so much, by the toys and trifles they gave them, that they presently told them that the gold, which they called Aarah, was picked up in the rivers that came down from a mountain which they pointed to, a great way off. Our men prevailed with three of them, to go with them to one of these rivers, and gave them beads and such things to encourage them, but no hatchet; that was kept up at a high rate, and as a rarity fit only for a king, or some great man who wore Aarah on his ears.

In a word, they came to the river where they said they found this Aarah; and the first thing our men observed there, was an Indian sitting on the ground, and beating something upon a great stone, with another stone in his hand for his hammer: they went to see what he was doing, and found he had got a lump of gold from the sand, as big as a swan-shot, of no regular shape, but full of corners, neither round nor square; and the man was beating it flat as well as he could.

One of our men, who had a hatchet in his hand, made signs to him to let him flatten it for him; and so turning the back part of the hatchet, which served the purpose of a hammer, he beat the piece of gold flat in an instant; and then turning it upon the edge, beat it that way until he brought it to be round also.

This was so surprising to the man who had been beating, that he stood looking on with all the tokens of joy and amazement; and, desiring to see the hatchet, looked this way and that way, upon those of his countrymen who came with us, as if asking them if ever they saw the like.

When our man had done, he made signs to know if he had any more Aarah; the man said nothing, but went down to the brink of the river, and, putting his hand into a hole, he brought out three little lumps of gold, and a great many smaller, some of them about as big as a large pin's head; all which he had laid up there, in the hollow of a stone. Our man thought it was too much, to take all that for the hatchet; and therefore pulled out some beads, and pieces of glass, and such toys; and, in short, bought all this cargo of gold, which in the whole weighed near five ounces, for about the value of two shillings.

Though these bargains were very agreeable to us, yet the discovery of such a place, and of such a fund of treasure, in a part of the world, which it is very probable, was never before seen by any European eyes, nor so much as inquired after, was the greatest satisfaction imaginable to me; knowing the adventurous temper of the gentleman who was our principal employer. Upon this account, while my men busied themselves in their daily search after gold, and in finding out the rivers from whence it came, or rather where it was found, I employed myself to be fully informed where this place was; whether it was an island or a continent; and having found a tolerable good road for our ships to ride in, I caused my two shallops, well manned, to run along the coast, both east and west, to find which way it lay, and whether they could find any end of it; as also to see what rivers, what people, and what provisions they could meet with.

By my observation, I found that we were in the latitude of $27^{\circ} 13'$ south meridian; distance from the Ladrões about 16° east. While my shallops were gone, I went on shore, and some of my men set up tents, as well for the convenience

of their traffick, as for their resting on shore all night; keeping, however, a good guard, and having two of our ship's dogs with them, who never failed giving them notice, whenever any of the natives came near them; for what ailed the dogs I know not, but neither of them could bear the sight of the Indians, and we had much to do to keep them from flying at them.

While we rode here, we had the most violent storm of wind with rain, and with great claps of thunder, that we had yet sustained since we came out of England. It was our comfort that the wind came off shore, for it blew at south, and shifting between the south, south-east, and south-west, with such excessive gusts, and so furious, and withal, not only by squalls and sudden flaws, but a settled terrible tempest, that had it been from off sea, as it was off shore, we must have perished, there had been no remedy, and even as it was, we rode in great danger. My boatswain called out twice to me to cut my masts by the board, protesting we should either bring our anchors home, or founder as we rode; and indeed the sea broke over us many times in a terrible manner. As I said before, we had an indifferent good road, and so we had, but not a very good one, for the land was low; and on the east we lay a little open. However, our ground-tackle was good, and our ship very tight, and I told the boatswain I would rather slip the cable and go off to sea than cut the masts. However, in about four hours' time more we found the wind abate, though it blew very hard for three days after.

I was in great pain for my two shallops in this tempest, but they had both the good luck to lie close under the shore; and one indeed had hauled quite upon the land, where the men lay on shore under their sail, so that they got no damage; and about three days after, one of them returned, and brought me word they had been to the west, where they had made very little discovery, as to the situation of the country, or whether it was an island or a continent, but they had conversed with the natives very often, and found several who had pieces of gold hanging, some in their hair, some about their necks; and they made a shift to bring as many with them as weighed, all put together, seventeen or eighteen ounces, for which they had bartered toys and trifles, as we did; but they found no rivers, where they could discover any gold in

the sands, as we had done, so that they believed it all came from the side where we were.

But our other shallop had much better luck; she went away to the east, and by the time she had gone about sixteen leagues she found the shore break off a little, and soon after a little more, until at length they came as it were to the land's end; when, the shore running due south, they followed, according to their account, near thirteen leagues more.

In this interval they went several times on shore, entered three rivers, indifferently large, and one of them very large at the mouth, but grew narrow again in three or four leagues; but a deep channel, with two-and-twenty to eight-and-twenty fathom water in it all the way, as far as they went.

Here they went on shore and trafficked with the natives, whom they found rude and unpolished, but a very mild inoffensive people; nor did they find them anything thievish, much less treacherous, as in some countries is the case. They had the good luck to find out the place where, as they supposed, the king of the country resided; which was a kind of a city, encompassed all round, the river making a kind of double horse-shoe. The manner of their living is too long to describe; neither could our men give any account of their government, or of the customs of the place; but what they sought for was gold and provisions, and of those they got pretty considerable quantities.

They found the Indians terribly surprised at the first sight of them; but after some time they found means to let them know they desired a truce, and to make them understand what they meant by it.

At length a truce being established, the king came, and with him near three hundred men; and soon after the queen, with half as many women. They were not stark naked, neither men nor women, but wearing a loose piece of cloth about their middles; what it was made of we could not imagine, for it was neither linen or woollen, cotton or silk; nor was it woven, but twisted and braided by hand, as our women make bone lace with bobbins. It seems it was the stalk of an herb, which this was made with; and was so strong that I doubt not it would have made cables for our ships, if we had wanted to make such an experiment.

When the king first came to our men they were a little shy of his company, he had so many with him, and they

began to retire ; which the king perceiving, he caused all his men to stop, and keep at a distance ; and advanced himself with about ten or twelve of his men, and no more.

When he was come quite up, our men, to show their breeding, pulled off their hats, but that he did not understand, for his men had no hats on. But the officer making a bow to him, he understood that presently, and bowed again ; at which all his men fell down flat upon their faces, as flat to the ground as if they had been shot to death with a volley of our shot ; and they did not fall so quick but they were up again as nimbly, and then down flat on the ground again ; and this they did three times, their king bowing himself to our men at the same time.

This ceremony being over, our men made signs to them that they wanted victuals to eat, and something to drink : and pulled out several things, to let the people see they would give something for what they might bring them.

The king understood them presently, and turning to some of his men he talked awhile to them ; and our men observed, that while he spoke they seemed to be terrified, as if he had been threatening them with death. However, as soon as he had done, three of them went away, and our men supposed they went to fetch something that the king would give them ; upon which, that they might be beforehand with them, our men presented his majesty with two pair of bracelets of fine glass beads of several colours, and put them upon his arms, which he took most kindly ; and then they gave him a knife, with a good plain ivory handle, and some other odd things. Upon receiving these *noble* presents, he sends away another of his men, and a little after two more.

Our men observed that two of the men went a great way off toward the hill, but the other man that he sent away first went to his queen, who, with her retinue of tawny ladies, stood but a little way off, and soon after her majesty came with four women only attending her.

The officer who commanded our men, finding he should have another kind of compliment to pay the ladies, retired a little ; and, being an ingenious handy sort of a man, in less than half-an-hour, he and another of his men made a nice garland, or rather a coronet, of sundry strings of beads, and with glass bobs and pendants, all hanging about it, most wonderful gay ; and when the queen was come, he went up

to the king, and showing it to him, made signs that he would give it to the queen.

The king took it, and was so pleased with the present, that truly he desired our officer to put it upon his own head, which he did; but, when he had got it so placed, he let our men see he was king over his wife, as well as over the rest of the country, and that he would wear it himself.

Our men then pulled out a little pocket looking-glass, and, holding it up, let his majesty see his own face, which we might reasonably suppose he had never seen before, especially with a crown on his head too. Before he saw his own face in the glass he was grave and majestic, and carried it something like a king; but he was so delighted with the novelty that he was quite beside himself, and jumped and capered and danced about like a madman.

All this while our men saw nothing coming, but that all was given on their side; whereupon they made signs again, that they wanted provisions.

The king then made signs, pointing to a hill a good way off, as if it would come from thence very quickly; and then looked to see if his people were coming, as if he was impatient till they came, as well as our men.

During this time, one of our men observed that the queen had several pieces of gold, as they thought them to be, hanging about her, particularly in her hair, and large flat plates of gold upon the hinder part of her head, something in the place of a roll, such as our women wear; that her hair was wound about it in rolls, braided together very curiously; and having informed our officer, he made signs to the king for leave to give the queen something, which he consented to. So he went to her majesty, making a bow as before; but this complaisance surprised her, for, upon his bowing, on a sudden falls the queen and all her four ladies flat on the ground, but were up again in a moment; and our people wondered how they could throw themselves so flat on their faces, and not hurt themselves; nor was it less to be wondered at, how they could so suddenly jump up again, for they did not rise up gradually as we must do, with the help of our hands and knees, if we were extended so flat on our faces, but they, with a spring, whether with their hands or their whole bodies, we knew not, sprang up at once, and were upon their feet immediately.

This compliment over, our officer stepped up to the queen, and tied about her neck a most delicate necklace of pearl; that is to say, of large handsome white glass beads, which might in England cost about fourpence halfpenny, and to every one of her ladies he gave another of smaller beads, differing in colour from those which he gave the queen. Then he presented her majesty with a long string of glass beads, which, being put over her head, reached down to her waist before, and joined in a kind of tassel, with a little knot of blue riband, which she was also extremely pleased with; and very fine she was.

The queen made, it seems, the first return; for, stepping to one of her women, our men observed that her attendant took something out of her hair, and then the queen let her tie her hair up again; after which her majesty brought it and gave it to our officer, making signs to know if it was acceptable. It was a piece of gold that weighed about two ounces and a half; it had been beaten as flat as they knew how to beat it. But the metal was of much more beauty to our men than the shape.

Our officer soon let the queen and people see that he accepted the present, by laying it to his mouth and to his breast, which he found was the way when they liked anything. In short, our officer went to work again, and in a little while he made a little coronet for the queen, as he had done before for the king, though less; and, without asking leave of his majesty, went up to her and put it upon her head; and then gave her a little looking-glass, as he had done to the king, that she might view her face in it.

She was so surprised at the sight, that she knew not how to contain herself; but, to show her gratitude, she pulled out another plate of gold out of her own hair, and gave it to our officer; and, not content with that, she sent one of her women to the crowd of females who first attended her, and whether she stripped them of all the gold they had, or only a part, she brought so many pieces, that, when together, they weighed almost two pounds.

When she was thus dressed she stepped forward very nimbly and gracefully towards the king, to show him what she had got; and, finding he was dressed as fine as herself, they had work enough for near two hours to look at one another, and admire their new ornaments.

Our men reported, that the king was a tall, well-shaped man, of a very majestic deportment, only that when he laughed he showed his teeth too much, which, however, were as white as ivory: as for the queen, saving that her skin was of a tawny colour, she was a very pretty woman; very tall, a sweet countenance, admirable features, and, in a word, a complete handsome lady.

She was very oddly dressed; she was quite naked from her head to below her breasts; her breasts were plump and round, not flaggy and hanging down, as it generally is with the Indian women, some of whose breasts hang as low as their bellies, but projecting as beautifully as if they had been laced up with stays round her body; and below her breast she had a broad piece of a skin of some curious creature, spotted like a leopard, probably of some fine spotted deer. This was wrapped round her very tight, like a body-girt to a horse; and under this she had a kind of petticoat, as before described, hanging down to her ankles. As for shoes or stockings, they were only such as nature had furnished. Her hair was black, and, as supposed, very long, being wreathed up and twisted in long locks about the plate of gold she wore; for when she pulled off the plate above mentioned, it hung down her back and upon her shoulders very gracefully; but it seems she did not think so, for, as soon as she found it so fallen down, she caused one of her women to roll it up, and tie it in a great knot which hung down in her neck, and did not look so well as when it was loose.

While the king and the queen were conversing together about their fine things, as above, our men went back to the boat, where they left the purchase they had got, and furnished themselves with other things fit to traffick with as they saw occasion; and they were not quite come up to the king again, when they perceived that the men the king had sent up into the country were returned, and that they brought with them a great quantity of such provisions as they had, which chiefly consisted of roots and maize, or Indian corn, and several fruits which we had never seen before. Some of them resembled the large European figs, but were not really figs; with some great jars of water, having herbs steeped in it, and roots, that made it look as white as milk, and drank like milk sweetened with sugar, but more delicious, and exceeding cool and refreshing. They brought also a

great quantity of oranges, but they were neither sweet nor sour, and our men believed they were not ripe; but when they were dressed after the manner of the country, which they showed our men, and which was to roast them before the fire, they had an admirable flavour, and our men brought a great many away to us, and when we roasted them they exceeded anything of the kind I had ever tasted.

After our men had received what was brought, and shown that the whole was very acceptable, the king made signs that he would be gone, but would come again to them the next morning; and, pointing to the queen's head, where the plate of gold had been that she had given to our men, intimated that he would bring some of the same with him the next day. But while he was making these signs, one of his other messengers came back, and gave the king something into his hand wrapped up, which our men could not see. As soon as the king had it, as if he had been proud to show our men that he could make himself and his queen as fine as they could make him, he undid the parcel, and decked out his queen with a short thing like a robe, which reached from her neck down to the spotted skin which she wore before, and so it covered her shoulders and breast. It was made of an infinite number and variety of feathers, oddly, and yet very curiously put together; and was spangled all over with little drops or lumps of gold; some no bigger than a pin's head, which had holes made through them, and were strung six or seven together, and so tied on to the feathers; some as big as a large pea, hanging single, some as big as a horse-bean, and beaten flat, and all hanging promiscuously among the feathers, without any order or shape, which, notwithstanding, were very beautiful in the whole, and made the thing look rich and handsome enough.

As soon as he had thus equipped his queen, he put another upon himself, which was larger, and had this particular in its shape, that it covered his arms almost to his elbows, and was so made that it came round under the arm, and being fastened there with a string, made a kind of sleeve.

As the king's robe, or whatever it may be called, was longer, for it came down to his waist, so it had a great deal more gold about it, and larger pieces than that the queen wore. When their majesties had thus put on their robes, it

may be guessed how glorious they looked, but especially the queen, who being a most charming beautiful creature, as said before, was much more so when glistening thus with gold. Our men looked very narrowly to observe whether there were any diamonds or pearls among their finery, but they could not perceive any.

The king and queen now withdrew for that evening, but their people did not leave our men so, for they thronged about them; and some brought them jars of the white liquor, some brought them roots, others fruits, some one thing, some another; and our men gave every one of them some small matter or other in proportion to what they brought. At last, there came four particular tall lusty men, with bows and arrows; but before they came close up to our men, they laid down their bows and arrows on the ground, and came forward with all the tokens of friendship they were able to make.

They had two youths with them, each of whom led a tame fawn of pretty large growth, and when the men came up, they gave the two fawns to our men; who, in return, gave each of them a knife, and some strings of beads, and such toys as they had.

Our men observed, that all these men had little bits of gold, some of one shape, and some of another, hanging at their ears; and when our men came to be familiar, they asked them as well as they could, where they found that stuff? and they made signs to the sand in the river, and then pointed towards that part of the country where our ships lay, which signified to our men that the gold was, most of it, where we lay, not there where the king and queen resided. Nay, when our men pointed again to the river where they were, and went and took up some of the sand, as if they would look for gold in it, they made signs of laughing at it, and that there was nothing to be found there, but that it lay all the other way.

And yet two or three of the men, who, when the tide was out, went up the bank of the river, two or three miles upon the sands, peeping and trying the sands as they went, they found three or four little bits of pure gold, though not bigger than pins heads; but no doubt farther up the country they might have found more.

These four men seeing how fond our people were of the

gold, made signs they could fetch gold to them if they would give them such things as they liked; and ours again told them they should have anything they pleased; and, as earnest, gave them some pieces of iron and bits of glass of small value, both which they were much delighted with.

Early in the morning their four customers came again, and brought several men, who seemed to be servants, along with them, loaden with refreshments, such as the white water, mentioned above, which they brought in earthen pots, very hard, made so by the heat of the sun. They brought also three small deer with them, and a kind of coney or rabbit, but larger, which our men were very glad of. But that which was above all the rest, they brought a good quantity of gold-dust, that is to say, some in small lumps, some in bigger; and one of them had near a pound weight wrapped up in a piece of coney-skin, which was all so very small that it was like dust; which, as our men understood afterwards, was reckoned little worth, because all the lumps had been picked out of it.

Our men, to be sure, were very willing to trade for this commodity, and therefore they brought out great variety of things to truck with them, making signs to them to pick out what they liked; but still keeping a reserve for the king and queen, whom they expected. Above all they had made a reserve for the king of some extraordinary hatchets, which they had not yet suffered to be seen, with a hammer or two, and some drinking-glasses, and the like, with some particular toys for the queen.

But they had variety enough left besides for the four men: who, in short, bought so many trinkets and trifles, that our men not only got all the gold they brought, but the very pieces of gold out of their ears; in return for which our men gave them every one a pair of ear-rings, to hang about their ears, with a fine drop; some of green glass, some red, some blue; and they were wonderfully pleased with the exchange, and went back, we may venture to say, much richer in opinion than they came.

As soon as these people had done their market, and indeed a little before, they perceived at a distance the king and queen coming with a great retinue; so they made signs to our men that they must be gone, and that they would not have the king know that they had been there.

I must confess, the relation of all this made me very much repent that I had not happened to have put in there with the ships; though indeed, as the road lay open to the east and south winds, it might have been worse another way; I mean, when the storm blew. However, as it is, I must report this part, from the account given us by my men.

When the king and queen came the second time, they were together, and dressed up, as our men supposed, with the utmost magnificence, having the fine feathered spangled things about their shoulders; and the king had over all his habit, a fine spotted robe of deer skins, neatly joined together; and which, as he managed it, covered him from head to foot; and, in short, it was so very beautiful that he really looked like a king with it.

When he came to our men, and the ceremony of their meeting was over, the king, turning round, showed them, that he had brought them stores of provisions; and indeed, so he had; for he had at least fifty men attending him, loaden with roots, and oranges, and maize, and such things; in short, he brought them above twenty thousand oranges; a great parcel of that fruit like a fig, which I mentioned above, and other fruits. After which another party followed, and brought twenty live deer, and as many of their rabbits, dead; the latter are as big as our hares.

As they came up, the king made signs to our men to take them; and our officer making signs to thank his majesty, he ordered one of the queen's attendants to give him one of the feathered robes, such an one as the king himself had on; and made mighty fine with lumps and tassels of gold, as the other. And a tawny lass advancing to him offered to put it over his head, but he took it in his hand and put it on himself, and looked as like a jack pudding in it, as any one could desire; for it made no figure at all upon him, compared to what it did upon the Indians.

When they had received all this, they could not but make a suitable return; and therefore our officer caused his reserve to be brought out; and first he gave his majesty a dozen of very handsome drinking-glasses of several sizes; with half a dozen of glass beakers, or cups, to the queen, for the same use. Then he gave the king a little hanger, and a belt to wear it by his side; and showed him how to buckle it on and take it off, and how to draw it out, and put it in again.

This was such a present, and the king was so delighted with it, that our officer said he believed the king did nothing but draw it and put it up again, put it on and pull it off, for near two hours together.

Besides this he gave the king three hatchets, and showed him the uses of them ; also two large hammers, and a pair of very strong large shears, particularly showing him, that with those hammers they might beat out the gold lumps which they found in the rivers, and with the shears might cut the edges round, or into what shape they pleased, when they were beaten thin.

To the queen he gave six little knives, and a dozen small looking-glasses for her ladies ; six pairs of seissors, and a small box full of large needles ; then he gave her some coarse brown thread, and showed her how to thread the needle, and sew anything together with the thread ; all which she admired exceedingly, and called her tawny maids of honour about her, that they might learn also. And whilst they were standing all together, our officer, to divert the king, sewed two of her women one to another by the lap of their waistcoats, or what else it might be called ; and when they were a little surprised at it, and began, as he thought, to be a little uneasy, he took the seissors, and at one snap set them at liberty again, which passed for such an extraordinary piece of dexterity, that the king would needs have two of them sewed together again, on purpose to see it cut again. And then the king desired he might have a needle and thread himself, and a pair of seissors ; then he would sew some things together, and cut them asunder again several times, and laugh most heartily at the ingenuity of it.

Besides the above things, they gave her majesty a pair of ear-rings to hang on her ears, the glass in them looking green like an emerald ; a ring of silver, with false stones in it, like a rose diamond ring, the middle stone red like a ruby, which she went presently and gave to the king ; but our officer made signs that he had one that was bigger for the king, and accordingly gave the king one much larger ; and now they had done giving presents, as they thought, when the king made a sign to the queen, which she understood, and, calling one of her women, she brought a small parcel, which the queen gave our officer into his hand, wherein was about eleven pounds weight of gold-dust, but, as before, no lumps in it.

Our men having thus finished their traffick, and being about to come away, they made signs to the king, that they would come again and bring him more fine things; at which the king smiled, and pointing to the gold, as if telling them he would have more of that for them when they came again.

Our men had now their expectations fully answered; and, as I said, had ended their traffick; and, taking leave of the king and all his retinue, retired to their shallop, the king and queen going away to their city as above. The wind blowing northerly, they were seven days before they got down to us in the ship; during which time they had almost famished the deer they had left, five of which they had kept to bring us alive, and yet they went two or three times on shore to get food for them by the way.

We were all glad to see them again, and I had a great deal of reason to be very well satisfied with the account of their traffick, though not much with their discovery, for they were not able to give us the least account whether the land was a continent or an island.

But let that be how it will, it is certainly a country yet unfrequented by any of the Christian part of mankind, and perhaps, may ever be so, and yet may be as rich as any other part of the world yet discovered. The mountains in most of the islands, as well as of the mainland in those parts, abounding in gold or silver, and, no question, as well worth searching after as the coast of Guinea; where, though the quantity they find is considerable, yet it is at this time sought after by so many, and the negroes taught so well how to value it, that but a little is brought away at a time, and so much given for it, that, computing the charge of the voyage, is oftentimes more than it is worth.

But though it is true that what gold is found here is a great way off, yet, I am persuaded such quantities are to be had, and the price given for it so very trifling, that it would be well worth searching for.

I reckon, that, including the gold our shallop brought, and what we got on shore where we lay, we brought away about twenty-four pounds weight of gold; the expense of which we could not value at above ten or eleven pounds in England, put it all together; and reckoning for all the provisions we got there, which supplied us for twenty days after we came away.

For while our shallop was making her visit thus to the

royal family, &c., as is related, our men were not idle on shore, but, partly by trade with the natives, and by washing the sands in the small rivers, we got such a quantity of gold as well satisfied us for the stay we made.

We had been about eighteen days here when our shallop returned, and we stayed a week more trafficking with the people; and I am persuaded, if we had been in the mind to have settled there and stayed till now, we should have been very welcome to the people. We saw neither horse or cow, mule, ass, dog, or cat, or any of our European animals, excepting that our men shot some wild ducks and widgeons, exactly the same which we see in England, and very fat and good, but much easier to shoot than in England, having never been acquainted with the flash and noise of guns as ours have been; we also found a sort of partridges in the country not much unlike our own, and a great many of the whistling plover, the same with ours.

Though this month's stay was unexpected, yet we had no reason to think our time ill spent. However, we did not think we ought to lie here too long whatever we got; so we weighed and stood off to sea, steering still south-east, keeping the shore of this golden country in sight, till our men told us they found the land fall off to the south. Then we steered away more southerly for six or eight days, not losing sight of land all the time, till by an observation we found we were in the latitude of $34^{\circ} 30'$ south of the line, our meridian distance from the Ladrões $22^{\circ} 30'$ east, when a fresh gale of wind springing up at south and by east, obliged us to haul close for that evening. At night it blew such a storm that we were obliged to yield to the force of it, and go away afore it to the north, or north-by-west, till we came to the point of that land we passed before. Here, the land tending to the west, we ran in under the lee of a steep shore, and came to an anchor in twenty-five fathoms water, being the same country we were in before. Here we rode very safe for five days, the wind continuing to blow very hard all the time from the south-east.

My men would fain have had me gone ashore again and trafficked with the people for more gold; but I, who was still in quest of further discoveries, thought I knew enough of this place to tempt my friend the merchant, whose favourite design was that of making new discoveries, to another voy-

age there, and that was enough for me. So I declined going on shore again, except that we sent our boats for a recruit of fresh water; and our men, while they were filling it, shot a brace of deer, as they were feeding by the side of a swamp or moist ground, and also some wild ducks. Here we set up a great wooden cross, and wrote on it the names of our ships and commanders, and the time that we came to an anchor there.

But we were obliged to a farther discovery of this country than we intended, by the following accident. We had unmoored early in the morning, and by eight o'clock were under sail; by ten we had doubled the point I mentioned above, and stood away south, keeping the shore on board, at the distance of about two leagues west.

The next day, the officer who had been with the shallop, showed us the opening or mouth where he had put in, and where he had made his traffick with the king of the country, as said before.

We went on still for two days, and still we found the land extending itself south, till the third day in the morning, when we were a little surprised to find ourselves, as it were, embayed, being in the bottom of a deep gulf, and the land appearing right ahead, distance about three leagues; the coast having turned away to the east and by south, very high land and mountainous, and the tops of some of the hills covered with snow.

Our second mate and the boatswain, upon this discovery, were for coming about, and sent to me for orders to make signals to the other ship and our brigantine, who were both ahead, to do the like; but I, who was willing to acquaint myself as fully as I could with the coast of the country, which I made no question I should have occasion to come to again, said, No, no, I will see a little farther first. So I ran on, having an easy gale at north-east and good weather, till I came within about a league and a half of the shore, when I found, that in the very bite or nook of the bay, there was a great inlet of water, which either must be a passage or strait between the land we had been on shore upon; which, in that case, must be a great island, or that it must be the mouth of some extraordinary great river.

This was a discovery too great to be omitted, so I ordered the brigantine to stand in with an easy sail, and see what

account could be had of the place; accordingly they stood in, and we followed about a league, and then lay by, waiting their signals. I had particularly ordered them to keep two boats ahead to sound the depth all the way, and they did so; and how it happened we knew not, but on a sudden we heard the sloop fire two guns first, and then one gun; the first was a signal to us to bring to, and come no farther: the next was a signal of distress. We immediately tacked to starboard, but found a strong current setting directly into the bite and there not being wind enough for us to stem the current, we let go our anchors in twenty fathoms water.

Immediately we manned out all the boats we had, great and small, to go and assist our brigantine, not knowing what distress she might be in; and they found that she had driven up, as we were like to have done, too far into the channel of a large river, the mouth of which, being very broad, had several shoals in it: and though she had dropped her anchor just upon notice, which the boats who were sounding gave her, yet she tailed aground upon a sand-bank, and stuck fast; our men made no doubt but she would be lost, and began to think of saving the provisions and ammunition out of her. The two long boats accordingly began to lighten her; and first they took in her guns, and let out all her casks of water: then they began to take in her great shot and the heavy goods. But by this time they found their mistake, for the current, which I mentioned, was nothing but a strong tide of flood, which, the indraught of the river being considerable, ran up with a very great force, and in something less than an hour the brigantine floated again.

However, she had stuck so long upon the sand, and the force of the current or tide had been so great, that she received considerable damage; and had a great deal of water in her hold. I immediately ordered out boats to row to the land, on both sides, to see if they could find a good place to lay her on shore in; they obeyed the order, and found a very convenient harbour in the mouth of a small river, which emptied itself into the great river about two leagues within the foreland of it, on the north side, as the river Medway runs into the Thames, within the mouth of it, on the south side, only this was not so far up.

Here they ran in the sloop immediately, and the next day we came thither also; our boats having sounded the whole

breadth of the main river, and found a very good channel, half a league broad, having from seventeen to four-and-twenty fathoms water all the way, and very good riding.

Here we found it absolutely necessary to take everything out of the brigantine to search her bottom, for her lying on shore had strained her seams, and broke one of her floor timbers; and having hands enough, our men unloaded her in a very little time, and making a little doek for her, mended all the damage in about ten days' time. But seeing her in so good a condition, and the place so convenient, I resolved to have her whole bottom new calked and cleaned, that we made her as tight as she was when she first came off the stocks.

This I took for a good opportunity to careen and clean our other ships too; for we had done little to them since we came from Madagascar. We found our Madagasear ship much worm-eaten in her sheathing, which we helped as well as we could by new nailing and by taking out some pieces of her sheathing, and putting new ones in. But as to our great ship, she was sheathed with lead, and had received no damage at all; only that she was very foul, which we remedied by scraping and cleaning, and new graving her quite over.

We were not all employed in this work, and therefore we had leisure to make the best of our time for the main work of new discoveries. And now I resolved to leave it no more to under officers, as I had done before, viz., when I gave the command of the shallop that traded with the king and queen, as above, to a midshipman, which I was very sorry for, though the fellow did his business very well too; but, I say, I resolved not to trust any one now but myself.

In the first place, I took the two shallops and went across the mouth of the great river to the south shore, to see what kind of a country was to be found there. For, as to the north side, where we were, we found it to be much the same with that part where we had been before; with this difference only, whereas, in the other place gold was to be had in plenty, but here was none we could find; nor did we perceive that the people had any.

I found the mouth of this river, or inlet, to be about four leagues over where I crossed it, which was about three leagues and a half within the inlet itself. But the weather being very calm, and the flood-tide running sharp, we let our boat

drive up, in our crossing, about two leagues more; and we found the channel grew narrow so fast, that, where we came to land, it was not full a league over; that about three leagues farther we found it a mere river, not above as broad as the Thames at Blackwall.

We found it a steep shore, and, observing a little creek very convenient for our purpose, we ran in our boats among some flags or rushes, and laid them as soft and as safe as if they had been in a dock; we went all on shore immediately, except two men in each boat left to guard our provisions.

We had for arms, every man a musket, a pistol, and a cutlass; and in each boat we had six half pikes, to use as we might have occasion. We had also every man a hatchet, hung in a little frog at his belt; and in each boat a broad axe and a saw.

We were furnished with strings of beads, bits of glass, glass rings, ear-rings, pearl necklaces, and suchlike jewellery ware innumerable; besides knives, scissors, needles, pins, looking-glasses, drinking-glasses, and toys in great plenty.

We were no sooner on shore but we found people in abundance; for there were two or three small towns within a little way of the shore; and I suppose we might have the more people about us, because, as we understood afterwards, they had seen us before, though we had not seen them.

We made signs to them, by putting our fingers to our mouths, and moving our chaps as if we were eating, that we wanted provisions; and we hung up a white flag for a truce. They presently understood the first signal, but knew nothing of the last; and as to provisions, just as had been the case before, they brought us out roots and fruits, such as they ate themselves, but such as we had never seen before. Some of them, however, were very sweet and good, and when we boiled them they tasted much like an English parsnip; and we gave them strings of beads, pieces of glass, and such things as we remarked they were fond of.

We found the people, as I observed of the other, very inoffensive and sincere; not quarrelsome, nor treacherous, nor mischievous in the least. And we took care not so much as to let them know the use or manner of our fire-arms for a great while; neither was there one piece fired all the time we were among the other people, where we had so much gold. If there had, it had been very probable that they

would have fled the country, in spite of all the good usage we could have been able to have shown them.

The people where we were now were not so rich in gold as those where we were before, but we found them much better stored with provisions; for besides deer, of which they had great plenty and variety, for they had some of a sort which I had never seen before, and besides an infinite number of those rabbits I have mentioned, which were as big as our hares, and which do not burrow in the ground as our rabbits do, they had also a kind of sheep, large, (like those of Peru, where they are used to carry burdens), and very good. They have no wool nor horns, but are rather hairy like a goat; nor should I call them sheep, but that their flesh eats like mutton, and I knew not what else to call them. The natives called them huttash; but what breed, or from what part of the world, or whether peculiar to this division alone, I know not.

However, their flesh was very agreeable, and they were fat and good; and as the Indians were mightily pleased with the price we paid them, and the goods we paid them in, they brought us more of these huttashes than we knew what to do with; and as I can calculate the rate, I suppose we might have them for about eight-pence, or sometimes not above sixpence east each; for they would give us one very thankfully for a string or two of small beads, and think themselves mighty well paid.

I found them so plentiful, and so easy to come at, that in short I sent fifty of them alive, tied neck and heels, in one of the shallops back to our ships, and ordered them to send their long-boats over for more; for though it was so little a way over, we did not find they had any of them on that side the river.

We did the Indians another piece of service, for, if they gave us meat, we taught them to be cooks, for we showed them how to roast it upon a stick or spit before the fire; whereas they ate all their meat before, either stewed in earthen pots over the fire, with herbs, such as we did not understand, or thrown on burning fuel of green wood, which always made it taste and stink of the smoke most intolerably.

We had a great deal of opportunity now to converse with the people on both sides the river; and we found them to be

not only different nations, but of different speech and different customs. These on the south side, where I now was, seemed to be the best furnished with provisions, and to live in the greatest plenty. But those on the north side appeared better clothed, and a more civilized sort of people; and of the two, seemed to have in their countenances something more agreeable.

However, as they were near neighbours, for the river only parted them, they were not very much unlike each other. That which seemed most strange to me was, that we found they had little knowledge or communication one with another. They had indeed some boats in the river, but they were very small, and rather served to just waft them over, or to fish in them, than for any other use; for we found none that could carry above four men, and those very oddly made, partly as a canoe, by hollowing a tree, and partly by skins of beasts, dried and stuck on in such a manner that they would paddle along at a great rate with them.

For want of understanding their language I could come at no knowledge of their religion or worship; nor did I see any idols among them, or any adoration paid to the sun or moon. But yet, as a confirmation that all nations, however barbarous, have some notion of a God, and some awe of a superior power, I observed here, that, in making a bargain with one of the principal men, (such I perceived him to be by the respect the rest showed him), I say, being making a bargain with him, as well as could be done between two people who understood not one word of what either said, he had made signs to bring me twelve sheep the next morning, for some things that I was to deliver him of mine. I am sure the goods were not all of them of value sufficient to give me the least distrust; but when I gave him the goods without the sheep, being, as I said, to trust him till the next day, he called two men to him, and pointing to the goods that I had put into his hands, he tells upon his fingers twelve, letting them know, as I supposed, that he was to give me twelve sheep the next day in return, and so far it appeared they were to be witnesses of the agreement. He then placed his two hands, one upon each breast, with the fingers turned up towards his face, and holding them thus he looked towards heaven, with his face turned upward also, and with the utmost gravity, seriousness, and solemnity in his countenance

that ever I saw in any man's face in my life, he moved his lips in the action of speaking. When he had continued in this posture about a quarter of a minute, he took the two men, and put them in the same attitude, and then pointed to me, and next to himself; by which I understood, first, that he solemnly swore to me that he would bring the sheep punctually and faithfully to me, and then brought the two men to be bail or security for the performance; that is to say, to oblige themselves to perform it if he did not.

Doubtless those people who have any notion of a God must represent him to themselves as something superior, and something that sees, and hears, and knows what they say or do. Whether these people meant the sun, or the moon, or the stars, or other visible object, or whatever else, I do not pretend to determine, but it is certain they understood it to be something to swear by; something that could bear witness of their engagement, and that being called to witness it would resent their breach of promise if they made it. As to those whose gods are monsters, and hideous shapes, frightful images, and terrible figures, the motive of their adoration being that of mere terror, they have certainly gross ideas; but these people seem to act upon a more solid foundation, paying their reverence in a manner much more rational, and to something which it was much more reasonable to worship, as appeared in the solemnity of their countenances, and their behaviour in making a solemn promise.

We found those people clothed, generally speaking, over their whole bodies, their heads, arms, legs and feet excepted, but not so agreeably as those we mentioned above; and we found that the clothing of these were generally made of the skins of beasts, but very artfully put together, so that though they had neither needle nor thread, yet they had the same plant as I mentioned before, the stalk of which would so strongly tie like a thread, that they peeled it off thicker or finer as they had occasion, and made use of it abundance of ways to tie and twist, and make their clothes with it, as well for their occasion as if it had been woven in a loom.

We found several of these people had little bits of gold about them; but when we made signs to them to know where they got it, and where it might be had, they made signs to us, pointing to the country on the north side of the river; so that we had, it seems, fallen upon the right gold

coast in our first coming. They pointed indeed likewise to some very high mountains, which we saw at a great distance south-west, so that it seems as if there was gold found that way also; but it appeared the people here had not much of it for their share.

The men here had bows and arrows, and they used them so dexterously, that a wild goose flying over our heads, one of the Indians shot it quite through with an arrow. One of our men was so provoked to see them, as it were, to outdo him, that, some time after, seeing a couple of ducks flying fair for a mark, he presented his piece, and shot them both flying.

I was very angry when I heard the gun; had I been there he had never got leave to fire; however, when it was done, I was pleased well enough to see the effect it had upon these poor innocent well-meaning people. At first it frightened them to the last degree, and I may truly say it frightened them out of their senses, for they that were near it started so violently, that they fell down and lay speechless for some time; those that were farther off ran away, as if it had been some new kind of lightning and thunder, and came out of the earth instead of out of the clouds; but when they saw the two creatures fall down dead from above, and could see nothing that flew upward to kill them, they were perfectly astonished, and laid their two hands on their breasts and looked up to heaven, as if they were saying their prayers, in the most solemn manner imaginable.

However, this accident gave them terrible ideas of us, and I was afraid at first they would run all away from us through fear. I therefore used them after it with all the kindness and tenderness imaginable, gave them every day some trifle or other, which, though of no value to me, they were exceedingly fond of; and we asked nothing of them in return but provisions, of which they had great plenty, and gave us enough every day to satisfy us. As for drink, they had none of the milky liquor which we had in the other part of the country, but they had a root which they steeped in water, and made it taste hot, as if pepper had been in it, which made it so strong, that though it would not make our men drunk, it was worse, for it made them nearly mad.

I was so pleased with these people that I came over to them every other day, and some of our men lay on shore, under a sail pitched for a tent; and they were so safe, that

at last they kept no watch, for the poor people neither thought any harm, nor did any ; and we never gave them the least occasion to apprehend anything from us, at least not till our man fired the gun, and that only let them know we were able to hurt them, without giving them the least suspicion that we intended it ; on the contrary, one of our men played an odd prank with a child, and fully satisfied them that we would do them no harm. This man having seen one of their children, a little laughing speechless creature, of about two years old, the mother having gone from it a little way, on some particular occasion, the fellow took it and led it home to the tent, and kept it there all night.

The next morning, he dressed it up with beads and jewels wondrous fine, a necklace about its neck, and bracelets of beads about its wrists, and several strings of beads wrapped up and tied in its hair, having fed it and laid it to sleep, and made much of it.

In this figure he carried it up in his arms to the Indian's hut where he had found it, and where there had been a lamentable outcry for the child all the night, the mother crying and raising her neighbours, and in a most strange concern.

But when some of the women, her neighbours, saw the child brought back, there was a contrary extreme of joy ; and the mother of it being fetched, she fell a-jumping and dancing to see her child, but also making so many odd gestures, as that our men could not well know for awhile whether she was pleased or not : the reason it seems was, she did not know whether to hope or fear, for she did not know whether the man would give back her child or take it away again.

But when the man who had the child in his arms had been told by signs that this was the mother, he beckoned to have her come to him, and she came, but trembling for fear. Then he took the child, and kissing it two or three times, gave it her into her arms. But it is impossible to express by words the agony the poor woman was in ; she took the child, and holding it in her arms fixed her eyes upon it without motion, or, as it were, without life, for a good while ; then she took it and embraced it in the most passionate manner imaginable ; when this was over, she fell a-crying so vehemently till she sobbed ; and all this while spoke not one word. When the crying had given sufficient vent to her passion, then she fell a-dancing and making a strange odd noise, that cannot be

described, and at last she left the child, and came back to the place where our men were, and to the man that brought her child, and, as soon as she came up to him, she fell flat on the ground, as I have described above the queen and her women did, and up again immediately; and thus she did three times, which it seems was her acknowledgment to him for bringing it back.

The next day, for her gratitude did not end here, she came down to our tent, and brought with her two sheep, with a great back-burden of roots of the kind which I said the natives steep in the water, and several fruits of the country, as much as two men who came with her could carry, and these she gave all to the man who had brought back her child. Our men were so moved at the affectionate carriage of this poor woman to her infant, that they told me it brought tears from their eyes.

The man who received the present took the woman and dressed her up almost as fine as he had done the child, and she went home like a kind of a queen among them.

We observed while we stayed here that this was a most incomparable soil; that the earth was a fat loamy mould; that the herbage was strong; that the grass in some places was very flourishing and good, being as high as our mid-thigh; and that the air was neither very hot, nor, as we believed, very cold. We made an experiment of the fruitfulness of the soil, for we took some white peas, and digging the ground up with a spade, we sowed some, and before we went away we saw them come out of the ground again, which was in about nine days.

We made signs to the people that they should let them grow, and that if they gathered them they were good to eat; we also sowed some English wheat, and let them know, as well as we could, what the use of them both was. But I make no doubt but they have been better acquainted with both by this time, by an occasion which followed.

Our men were so fond of this place, and so pleased with the temper of the people, the fruitfulness of the soil, and agreeableness of the climate, that about twenty of them offered me, if I would give them my word to come again, or send to them to relieve and supply them with necessaries, they would go on shore and begin a colony, and live all their days there. Nay, after this, their number came up to three-and-thirty;

or they offered, that, if I would give them the sloop, and leave them a quantity of goods, especially of such toys as they knew would oblige the people to use them well, they would stay at all hazards, not doubting, as they told me, but they should come to England again at last, with the sloop full of gold.

I was not very willing to encourage either of these proposals, because, as I told them, I might perhaps find a place as fit to settle a colony in before we came home, which was not at such an excessive distance from England, so that it was scarce possible ever to relieve them. This satisfied them pretty well, and they were content to give over the project; and yet, at last, which was more preposterous than all the rest, five of our men and a boy ran away from us and went on shore, and what sort of life they led, or how they managed, we could not tell, for they were too far off us to inquire after them again. They took a small yawl with them, and it seems had furnished themselves privately with some necessary things, especially tools, a grindstone, a barrel of powder, some peas, some wheat, and some barley; so that it seems they are resolved to plant there. I confess I pitied them, and when I had searched for them, and could not find them, I caused a letter to be written to them, and fixed it upon a post at the place where our ship careened; and another letter on the south side, to tell them that in such a certain place I had left other necessaries for them, which I did, made up in a large case of boards or planks, and covered with boards like a shed.

Here I left them hammocks for lodging, all sorts of tools for building them a house, spades, shovels, pickaxes, an axe, and two saws, with clothes, shoes, stockings, hats, shirts, and, in a word, every thing that I could think of for their use; and a large box of toys, beads, &c., to invite the natives to trade with them.

One of our men, whom they had made privy to their design, but made him promise not to reveal it until they were gone, had told them that he would persuade me, if he could, to leave them a farther supply; and bade them come to the place after the ships were gone, and that they should find directions left for them on a piece of a board, or a letter from him set up upon a post. Thus they were well furnished with all things for immediate living.

I make no doubt but they came to find these things; and, since they had a mind to make trial of a wild retired life, they might shift very well; nor would they want anything but English women to raise a new nation of English people, in a part of the world that belongs neither to Europe, Asia, Africa, or America. I also left them every man another gun, a cutlass, and a horn for powder; and I left two barrels of fine powder, and two pigs of lead for shot, in another chest by itself.

I doubt not but the natives will bestow wives upon them, but what sort of a posterity they will make, I cannot foresee, for I do not find by inquiry that the fellows had any great store of knowledge or religion in them, being all Madagascar men, as we called them, that is to say, pirates and rogues; so that, for aught I know, there may be a generation of English heathens in an age or two more; though I left them five Bibles, and six or seven Prayer-books, and good books of several sorts, that they might not want instruction, if they thought fit to make use of it for themselves or their progeny.

It is true, that this is a country that is remote from us of any in the yet discovered world, and consequently it would be suggested as unprofitable to our commerce; but I have something to allege in its defence, which will prove it to be infinitely more advantageous to England than any of our East India trade can be, or that can be pretended for it. The reason is plain in a few words; our East India trade is all carried on, or most part of it, by an exportation of bullion in specie, and a return of foreign manufactures or produce; and most of these manufactures also, either trifling and unnecessary in themselves, or such as are injurious to our own manufactures. The solid goods brought from India, which may be said to be necessary to us, and worth sending our money for, are but few; for example,

1. The returns which I reckon trifling and unnecessary, are such as China ware, coffee, tea, Japan work, pictures, fans, screens, &c.

2. The returns that are injurious to our manufactures, or growth of our own country, are printed calicoes, chintz, wrought silks, stuffs, of herbs and barks, block-tin, sugar, cotton, arrack, copper, and indigo.

3. The necessary or useful things are, pepper, saltpetre, dying-woods and dying-earths, drugs, lacs, such as shell-lac, stick-lac, &c., diamonds, some pearl, and raw-silk.

For all these we carry nothing or very little but money, the innumerable nations of the Indies, China, &c., despising our manufactures, and filling us with their own.

On the contrary, the people in the southern unknown countries, being first of all very numerous, and living in a temperate climate, which requires clothing, and having no manufactures, or materials for manufactures, of their own, would consequently take off a very great quantity of English woollen manufactures, especially when civilized by our dwelling among them, and taught the manner of clothing themselves for their ease and convenience; and, in return for these manufactures, it is evident we should have gold in specie, and perhaps spices, the best merchandise and return in the world.

I need say no more to excite adventurous heads to search out a country by which such an improvement might be made, and which would be such an increase of, or addition to, the wealth and commerce of our country.

Nor can it be objected here, that this nook of the country may not easily be found by any one but by us, who have been there before, and perhaps not by us again exactly; for, not to enter into our journal of observations for their direction, I lay it down as a foundation, that whoever sailing over the South Seas keeps a stated distance from the tropic, to the latitude of 56° to 60° , and steers eastward towards the Straits of Magellan, shall never fail to discover new worlds, new nations, and new inexhaustible funds of wealth and commerce, such as never were yet known to the merchants of Europe.

This is the true ocean called the South Sea; that part which we corruptly call so can be so in no geographical account, or by any rule, but by the mere imposition of custom, it being only originally called so, because they that sailed to it were obliged to go round the southermost part of America to come into it; whereas it ought indeed to be called the West Sea, as it lies on the west side of America, and washes the western shore of that great continent for near eight thousand miles in length; to wit, from 56° south of the line to 70° north, and how much farther we know not; on this account I think it ought to be called the American Ocean, rather than with such impropriety the South Sea.

But this part of the world where we were may rightly be called the South Sea, by way of distinction, as it extends

from India round the globe, to India again, and lies all south of the line even, for aught we know, to the very South Pole, and which, except some interposition of land, whether islands or continent, really surrounds the South Pole.

We were now in the very centre or middle of this South Sea, being, as I have said, in the latitude of $34^{\circ} 20'$; but having had such good success in our inquiry or search after new continents, I resolved to steer to the south and south-east, as far as till we should be interrupted by land or ice, determining to search this unknown part of the globe as far as nature would permit, that I might be able to give some account to my employers, and some light to other people that might come that way, whether by accident or by design.

We had spent six-and-twenty days in this place, as well in repairing our brigantine and careening, as trimming our ship; we had not been so long, but, that we did not resolve to careen our ships till we had spent ten days about the brigantine, and then we found more work to do to the sheathing of the Madagascar ship than we expected.

We stored ourselves here with fresh provisions and water, but got nothing that we could properly call a store, except the flesh of about thirty deer, which we dried in the sun, and which proved indifferently good afterwards, but not extraordinary.

We sailed again the six-and-twentieth day after we came in, having a fair wind at north and north-north-west, and a fresh gale which held us five days without intermission; in which time, running away south and south-south-east, we reached the former latitude, where we had been, and meeting with nothing remarkable, we steered a little farther to the eastward; but keeping a southerly course still, till we came into the latitude of 41° , and then going due east, with the wind at north and by west, we reckoned our meridian distance from the Ladrões, to be $50^{\circ} 30'$.

In all this run we saw no land, so we hauled two points more southerly, and went on for six or seven days more; when one of our men on the round top, cried Land! It was a clear fine morning, and the land he espied being very high, it was found to be sixteen leagues distance; and the wind slackening, we could not get in that night, so we lay by till morning, when being fair with the land, we hoisted our

boat to go and sound the shore, as usual. The men rowed in close with the shore and found a little cove, where there was good riding, but very deep water, being no less than sixty fathoms within cable's length of the shore.

We went in, however, and after we were moored sent our boat on shore to look for water, and what else the country afforded. Our men found water, and a good sort of country, but saw no inhabitants; and, upon coasting a little both ways on the shore, they found it to be an island, and without people; but said that about three leagues off to the southward, there seemed to be a Terra Firma, or continent of land, where it was more likely we should make some discovery.

The next day we filled water again, and shot some ducks, and the day after weighed and stood over for the main, as we thought it to be. Here, using the same caution as we always had done, viz., of sounding the coast, we found a bold shore and very good anchor hold, in six-and-twenty to thirty fathoms.

When we came on shore, we found people, but of a quite different condition from those we had met with before, being wild, furious, and untractable; surprised at the sight of us, but not intimidated; preparing for battle, not for trade; and no sooner were we on shore but they saluted us with their bows and arrows. We made signals of truce to them, but they did not understand us, and we knew not what to offer them more but the muzzles of our muskets; for we were resolved to see what sort of folks they were, either by fair means or foul.

The first time, therefore, that they shot at our men with their bows and arrows, we returned the salute with our musket-ball, and kill two of their foremost archers. We could easily perceive that the noise of our pieces terrified them, and the two men being killed, they knew not how, or with what, perfectly astonished them; so that they ran, as it were, clean out of the country, that is to say, clean out of our reach, for we could never set our eyes upon them after it. We coasted this place also, according to our usual custom; and, to our great surprise, found it was an island too, though a large one; and that the mainland lay still more to the southward, about six leagues distance, so we resolved to look out farther, and accordingly set sail the next day, and an-

chore; under the shore of this last land, which we were persuaded was really the main.

We went on shore here peaceably, for we neither saw any people, or the appearance of any, but a charming pleasant valley, of about ten or eleven miles long, and five or six miles broad; and then it was surrounded with mountains, which reached the full length, running parallel with the valley, and closing it in to the sea at both ends; so that it was a natural park, having the sea on the north side, and the mountains in a semicircle round all the rest of it. These hills were so high, and the ways so untrod and so steep, that our men, who were curious enough to have climbed up to the top of them, could find no way that was practicable to get up, and after two or three attempts gave it over.

In this vale we found abundance of deer, and abundance of the same kind of sheep which I mentioned lately. We killed as many of both as we had occasion for; and, finding nothing here worth our staying any longer for, except that we saw something like wild rice growing here, we weighed after three days, and stood away still to the south.

We had not sailed above two days with little wind and an easy sail, when we perceived this also was an island, though it must be a large one; for, by our account, we sailed near a hundred and fifty miles along the shore of it, and we found the south part a flat pleasant country enough; and our men said they saw people upon it on the south side, but we went not on shore there any more.

Steering due south from hence in quest of the mainland, we went on eleven days more, and saw nothing significant, and, upon a fair observation, I found we were in the latitude of $47^{\circ} 8'$ south; then I altered my course a little to the eastward, finding no land, and the weather very cold, and going on with a fresh gale at south-south-west for four days, we made land again; but it was now to the east-north-east, so that we were gotten, as we may say, beyond it.

We fell in with this land in the evening, so that it was not perceived till we were within half a league of it, which very much alarmed us, the land being low; and having found our error, we brought to and stood off and on till morning, when we saw the shore lie, as it were, under our larboard bow, within a mile and a quarter distance, the land low, but the sea deep and soft ground. We came to anchor imme-

diately, and sent our shallops to sound the shore, and the men found very good riding in a little bay, under the shelter of two points of land, one of which made a kind of hook, under which we lay secure from all winds that could blow, in seventeen fathoms good ground. Here we had a good observation, and found ourselves in the latitude of $50^{\circ} 21'$. Our next work was to find water, and our boats going on shore, found plenty of good water and some cattle, but told us they could give no account what the cattle were, or what they were like. In searching the coast, we soon found this was an island also, about eleven leagues in length, from north-west to south-east, what breadth we could not tell. Our men also saw some signs of inhabitants. The next day six men appeared at a distance, but would take notice of no signals, and fled as soon as our men advanced. Our people went up to the place where they lay, and found they had made a fire of some dry wood; that they had laid there, as they suppose, all night, though without covering. They found two pieces of old ragged skins of deer, which looked as if worn out by some that had used them for clothing, and one piece of a skin of some other creature, which had been rolled up into a cap for the head; also a couple of arrows of about four feet long, very thick, and made of a hard and heavy wood; so they must have very large and strong bows to shoot such arrows, and consequently must be men of an uncommon strength.

Our men wandered about the country three or four days, with less caution than the nature of their situation required; for they were not among a people of an innocent, inoffensive temper here, as before, but among a wild, untractable nation, that perhaps had never seen creatures in their own likeness before, and had no thought of themselves but of being killed and destroyed, and consequently had no thought of those they had seen but as of enemies, whom they must either destroy, if they were able, or escape from them if they were not. However, we got no harm, neither would the natives ever appear to accept any kindnesses from us.

We had no business here, after we found what sort of people they were who inhabited this place; so, as soon as we had taken in fresh water, and caught some fish, of which we found good store in the bay or harbour where we rode, we prepared to be gone. Here we found the first oysters that

we saw anywhere in the South Seas; and, as our men found them but the day before we were to sail, they made great entreaty to me to let them stay one day to get a quantity on board, they being very refreshing, as well as nourishing, to our men.

But I was more easily prevailed with to stay, when Captain Merlotte brought me, out of one oyster that he happened to open, a true oriental pearl, so large and so fine, that I sold it, since my return, for three-and-fifty pounds.

After taking this oyster, I ordered all our boats out a dredging, and in two days' time so great a quantity there was, that our men had taken above fifty bushels, most of them very large. But we were surprised and disappointed, when, at the opening all those oysters, we found not one pearl, small or great, of any kind whatever, so we concluded that the other was a lucky hit only, and that perhaps there might not be any more of that kind in these seas.

While we were musing on the oddness of this accident, the boatswain of the Madagascar ship, whose boat's crew had brought in the great oyster in which the pearl was found, and who had been examining the matter, came and told me that it was true that their boat had brought in the oyster, and that it was before they went out a dredging in the offing, but that their boat took these oysters on the west side of the island, where they had been *shoring*, as they called it, that is to say, coasting along the shore, to see if they could find anything worth their labour, but that afterwards the boats went a dredging in the mouth of the bay where we rode, and where, finding good store of oysters, they had gone no farther.

Upon this intelligenee we ordered all hands to dredging again, on the west side of the island. This was in a narrow channel, between this island and a little cluster of islands which we found together extended west, the channel where our men fished might be about a league over, or something better, and the water about five or seven fathoms deep.

They came home well tired and ill pleased, having taken nothing near so many oysters, as before; but I was much better pleased, when, in opening them, we found a hundred and fifty-eight pearls, of the most perfect colour, and of extraordinary shape and size, besides double the number of a less size, and irregular shape.

This quickened our diligence, and encouraged our men, for I promised the men two pieces of eight to each man above his pay, if I got any considerable quantity of pearl. Upon this they spread themselves among the islands, and fished for a whole week, and I got such a quantity of pearl as made it very well worth our while; and, besides that, I had reason to believe the men, at least the officers who went with them, concealed a considerable quantity among themselves; which, however, I did not think fit to inquire very strictly after at that time.

Had we been nearer home, and not at so very great an expense, as three ships, and so many men at victuals and wages, or had we been where we might have left one of our vessels to fish, and have come to them again, we would not have given it over while there had been an oyster left in the sea, or, at least, that we could come at: but as things stood, I resolved to give it over, and put to sea.

But when I was just giving orders, Captain Merlotte came to me, and told me that all the officers in the three ships had joined together to make an humble petition to me, which was, that I would give them one day to fish for themselves; that the men had promised that, if I would consent, they would work for them gratis; and likewise, if they gained anything considerable, they would account for as much out of their wages as should defray the ships' expense, victuals, and wages, for the day.

This was so small a request, that I readily consented to it, and told them I would give them three days, provided they were willing to give the men a largess, as I had done, in proportion to their gain. This they agreed to, and to work they went; but whether it was that the fellows worked with a better will, or that the officers gave them more liquor, or that they found a new bank of oysters, which had not been found out before, but so it was, that the officers got as many pearls, and some of extraordinary size and beauty, as they afterwards sold, when they came to Peru, for three thousand two hundred and seventeen pieces of eight.

When they had done this, I told them it was but right that, as they had made so good a purchase for themselves by the labour of the men, the men should have the consideration which I had proposed to them. But now I would make another condition with them, that we would stay three days

more, and whatever was caught in these three days should be shared among the men at the first port we came at, where they could be sold, that the men who had now been out so long might have something to buy clothes and liquors, without anticipating their wages; but then I made a condition with the men too, viz., that whatever was taken they should deposit it in my hands, and with the joint trust of three men of their own choosing, one out of each ship, and that we would sell the pearl, and I should divide the money among them equally, that so there might be no quarrelling or discontent, and that none of them should play any part of it away. These engagements they all came willingly into, and away they went a dredging, relieving one another punctually, so that in the three whole days every man worked an equal share of hours with the rest.

But the poor men had not so good luck for themselves as they had for their officers. However, they got a considerable quantity, and some very fine ones; among the rest they had two in the exact shape of a pear, and very exactly matched; and these they would needs make me a present of, because I had been so kind to them to make the proposal for them. I would have paid for them two hundred pieces of eight, but one and all, they would not be paid, and would certainly have been very much troubled if I had not accepted of them. And yet the success of the men was not so small but, joined with the two pieces of eight a man which I allowed them on the ships' account, and the like allowance the officers made them, and the produce of their own purchase, they divided afterwards about fifteen pieces of eight a man, which was a great encouragement to them.

Thus we spent in the whole, near three weeks here, and called these the Pearl Islands, though we had given no names to any of the places before. We were the more surprised with this unexpected booty, because we all thought it very unusual to find pearl of so excellent a kind in such a latitude as that of 49 to 50°; but it seems there are riches yet unknown in those parts of the world, where they have never been yet expected, and I have been told, by those who pretend to give a reason for it, that if there was any land directly under the poles, either south or north, there would be found gold of a fineness more than double to any that was ever yet found in the world: and this is the reason, they say,

why the magnetic influence directs to the poles, that being the centre of the most pure metals, and why the needle touched with the loadstone or magnet always points to the north or south pole. But I do not recommend this, as a certainty, because it is evident no demonstration could ever be arrived at, nor could any creature reach to that particular spot of land under the pole, if such there should be, those lands being surrounded with mountains of snow and frozen seas, which never thaw, and are utterly impassable either for ships or men.

But to return to our voyage; having thus spent as I have said, three weeks on this unexpected expedition, we set sail, and as I was almost satisfied with the discoveries we had made, I was for bending my course due east, and so directly for the south part of America; but the winds now blowing fresh from the north-west, and good weather, I took the occasion as a favourable summons, to keep still on southing as well as east till we came into the latitude of 56° , when our men, who had been all along a warm weather voyage, began to be pinched very much with the cold, and particularly complained that they had no clothes sufficient for it.

But they were brought to be content by force; for the wind continuing at north and north-north-west, and blowing very hard, we were obliged to keep on our course farther south, indeed, than I ever intended, and one of the men swore we should be driven to the south pole. Indeed, we rather ran afore it than kept our course, and in this run we suffered the extremest cold, though a northerly wind in those latitudes is the warm wind, as a southerly is here; but it was attended with rain and snow, and both freezing violently. At length one of our men cried out, Land, and our men began to rejoice; but I was quite of a different opinion, and my fears were but too just, for as soon as ever he cried Land, and that I asked him in what quarter, and he answered due south, which was almost right ahead, I gave orders to wear the ship, and put her about immediately, not doubting but instead of land I should find it a mountain of ice, and so it was; and it was happy for us that we had a stout ship under us, for it blew a fret of wind. However, the ship came very well about, though when she filled again, we found the ice not half a league distance under our stern.

As I happened to be the headmost ship, I fired two guns to give notice to our other vessels, for that was our signal to come about, but that which was very uneasy to me, the weather was hazy, and they were both out of sight; which was the first time that we lost one another in those seas; however, being both to windward, and within hearing of my guns, they took the warning, and came about with more leisure and less hazard than I had done.

I stood away now to the eastward, firing guns continually, that they might know which way to follow; and they answered me duly, to let me know that they heard me.

It was our good fortune also, that it was day when we were so near running into this danger. In the afternoon the wind abated, and the weather cleared up; we then called a council, and resolved to go no farther south, being then in the latitude of 67° south, which I suppose is the farthest southern latitude that any European ship ever saw in those seas.

That night it froze extremely hard, and the wind veering to the south-west, it was the severest cold that ever I felt in my life; a barrel or cask of water, which stood on the deck, froze entirely in one night into one lump, and our cooper, knocking off the hoops from the cask, took it to pieces, and the barrel of ice stood by itself, in the true shape of the vessel it had been in. This wind was, however, favourable to our deliverance, for we stood away now north-east and north-east-by-north, making fresh way with a fair wind.

We made no more land till we came into the latitude of 62° , when we saw some islands at a great distance, on both sides of us; we believed them to be islands, because we saw many of them with large openings between. But we were all so willing to get into a warmer climate, that we did not incline to put in anywhere, till, having run thus fifteen days and the wind still holding southerly, with small alteration and clear weather, we could easily perceive the climate to change, and the weather grow milder. And here taking an observation, I found we were in the latitude of $50^{\circ} 30'$, and that our meridian distance from the Ladrones west was 87° , being almost one semi-diameter of the globe, so that we could not be far from the coast of America, which was my next design, and indeed the chief design of the whole voyage.

On this expectation I changed my course a little, and went away north-by-east, till by an observation I found myself in $47^{\circ} 7'$, and then standing away east for about eleven days more, we made the tops of the Andes, the great mountains of Chiñ, in South America, to our great joy and satisfaction, though at a very great distance.

We found our distance from the shore not less than twenty leagues, the mountains being so very high; and our next business was to consider what part of the Andes it must be, and to what port we should direct ourselves first. Upon the whole, we found we were too much to the south still, and resolved to make directly for the river or port of Valdivia, or Baldivia, as it is sometimes called, in the latitude of 40° ; so we stood away to the north. The next day this pacific, quiet sea, as it is termed, showed us a very frowning rough countenance, and proved the very extreme of a contrary disposition; for it blew a storm of wind at east-by-south, and drove us off the coast again, but it abated again for a day or two; and then for six days together it blew excessive hard, almost all at east, so that I found no possibility of getting into the shore; and besides, I found that the winds came off that mountainous country in squalls, and that the nearer we came to the hills the gusts were the more violent. So I resolved to run for the island of Juan Fernandez, to refresh ourselves there until the weather was settled; and besides, we wanted fresh water very much.

The little that the wind stood southerly helped me in this run, and we came in five days more, fair with the island, to our great joy, and brought all our ships to an anchor as near the watering-place as is usual, where we rode easy, though the wind continued to blow very hard; and being, I say, now about the middle of our voyage, I shall break off my account here, as of the first part of my work, and begin again at our departure from hence.

It is true, we had got over much the greater run, as to length of way; but the most important part of our voyage was yet to come, and we had no inconsiderable length to run neither, for as we purposed to sail north, the height of Panama, in the latitude of 9° north, and back again by Cape Horn, in the latitude of, perhaps, 60° south, and that we were now in 40° south; those three added to the run, from Cape Horn home to England made a prodigious length, as

will be seen by this following account, in which also the meridian distances are not all reckoned, though those also are very great.

From Juan Fernandez to the Line - - - - -	30
From the Line to Panama - - - - -	9
From Panama to Cape Horn, including the distance we take in going round - - - - -	60
From Cape Horn to the Line again in the North Seas	60
From the Line to England - - - - -	51

210 Deg.

N.B. There must be deducted from this account the distance from Lima to Panama, because we did not go up to Panama, as we intended to do.

By this account we had almost 30° to run more than a diameter of the globe, besides our distance west, where we then were, from the meridian of England, whither we were to go; which, if exactly calculated, is above 70° , take it from the island of Juan Fernandez.

But to return a little to our stay in this place, for that belongs to this part of my account, and of which I must make a few short observations.

It was scarce possible to restrain Englishmen, after so long beating the sea, from going on shore when they came to such a place of refreshment as this; nor indeed was it reasonable to restrain them, considering how we all might be supposed to stand in need of refreshment, and considering that here was no length of ground for the men to wander in, no liquors to come at to distract them with their excess, and, which was still more, no women to disorder or debauch them. We all knew their chief exercise would be hunting goats for their subsistence, and we knew also, that, however they wanted the benefit of fresh provision, they must work hard to catch it before they could taste the sweet of it. Upon these considerations, I say, our ships being well moored, and riding safe, we restrained none of them, except a proper number to take care of each ship; and those were taken out by lot, and then had their turn also to go on shore some days afterwards, and in the mean time had both fresh water and

fresh meat sent them immediately, and that in sufficient quantity to their satisfaction. As soon as we were on shore and had looked about us, we began first with getting some fresh water, for we greatly wanted it. Then carrying a small cask of arrack on shore, I made a quantity of it be put into a whole butt of water before I let our men drink a drop; so correcting a little the chilness of the water, because I knew they would drink an immoderate quantity, and endanger their healths, and the effect answered my care; for, those who drank at the spring where they took in the water, before I got this butt filled, and before the arrack was put into it, fell into swoonings and faint sweats, having gorged themselves too much with the cool water; and two or three I thought would have died, but our surgeons took such care of them, that they recovered.

While this was doing, others cut down branches of trees and built us two large booths, and five or six smaller, and we made two tents with some old sails; and thus we encamped, as if we had been to take up our dwelling, and intended to people the island.

At the same time, others of our men began to look out for goats, for it may be believed we all longed for a meal of fresh meat. They were a little too hasty at their work at first, for firing among the first goats they came at, when there were but a few men together, they frightened all the creatures, and they ran all away into holes, and among the rocks and places where we could not find them; so that for that day they made little of it. However, sending for more firemen, they made a shift to bring in seventeen goats the same day, whereof we sent five on board the ships, and feasted with the rest on shore. But the next day the men went to work in another manner, and with better conduct; for as we had hands enough, and fire-arms enough, they spread themselves so far, that they, as it were, surrounded the creatures; and so driving them out of their fastnesses and retreats, they had no occasion to shoot, for the goats could not get from them, and they took them everywhere with their hands, except some of the old he-goats, which were so surly, that they would stand at bay and rise at them, and would not be taken; and these, as being old also, and as they thought, good for nothing, they let go.

In short, so many of our men went on shore, and these

divided themselves into so many little parties, and plyed their work so hard, and had such good luck, that I told them it looked as if they had made a general massacre of the goats, rather than a hunting.

Our men also might be said not to refresh themselves, but to feast themselves here with fresh provisions; for though we stayed but thirteen days, yet we killed three hundred and seventy goats, and our men who were on board were very merrily employed, most assuredly, for they might be said to do very little but roast and stew, and broil and fry, from morning to night. It was indeed an exceeding good supply to them, for they had been extremely fatigued with the last part of their voyage, and had tasted of no fresh provisions for six weeks before.

This made them hunt the goats with the more eagerness, and indeed, they surrounded them so dexterously, and followed them so nimbly, that notwithstanding the difficulties of the rocks, yet the goats could hardly ever escape them. Here our men found also very good fish, and some few tortoises, or turtles, as the seamen call them, but they valued them not, when they had such plenty of venison; also they found some very good herbs in the island, which they boiled with the goats' flesh, and which made their broth very savoury and comfortable, and withal very healing, and good against the scurvy, which in those climates Englishmen are very subject to.

We were now come to the month of April, 1715, having spent almost eight months in this trafficking wandering voyage from Manilla hither. And whoever shall follow the same, or a like track, if ever such a thing shall happen, will do well to make a year of it, and may find it very well worth while.

I doubt not but there are many undiscovered parts of land to the west, and to the south also, of the first shore, of which I mentioned that we stayed trafficking for little bits of gold. And though it is true that such traffick, as I have given an account of, is very advantageous in itself, and worth while to look for, especially after having had a good market for an out-ward-bound European cargo, according to the pattern of ours, at the Philippines, and which, by the way, they need not miss, I say, as this trade for gold would be well worth while, so had we gone the best way, and taken a course more

to the south from Manilla, not going away east to the Ladrões, we should certainly have fallen in with a country, from the coast of New Guinea, where we might have found plenty of spices, as well as of gold.

For why may we not be allowed to suppose that the country on the same continent, and in the same latitude, should produce the same growth? Especially considering them situated, as it may be called, in the neighbourhood of one another.

Had we then proceeded this way, no question but we might have fixed on some place for a settlement, either English or French, whence a correspondence being established with Europe, either by Cape Horn east, or the Cape De Bona Esperance west, as we had thought fit, they might have found as great a production of the nutmegs and the cloves as at Banda and Ternate, or have made those productions have been planted there for the future, where no doubt they would grow and thrive as well as they do now in the Moluccas.

But we spun out too much time for the business we did; and though we might, as above, discover new places, and get very well too, yet we did nothing in comparison of what we might be supposed to have done, had we made the discovery more our business.

I cannot doubt, also, but that when we stood away south it was too late; for had we stood into the latitude of 67° at first, as we did afterwards, I have good reason to believe that those islands which we call the Moluccas, and which lie so thick and for so great an extent, go on yet farther, and it is scarce to be imagined that they break off just with Gilloto.

This I call a mistake in me, namely, that I stood away east from the Philippines to the Ladrões, before I had gone any length to the south.

But to come to the course set down in this work, namely, south-east and by east from the Ladrões, the places I have taken notice of, as these do not, in my opinion, appear to be inconsiderable and of no value, so had we searched farther into them, I doubt not but there are greater things to be discovered, and perhaps a much greater extent of land also. For as I have but just, as it were, described the shell, having made no search for the kernel, it is more than probable, that within the country there might be greater discoveries

made, of immense value too. For even, as I observed several times, whenever we found any people who had gold, and asked them, as well as by signs we could make them understand, they always pointed to the rivers and the mountains which lay farther up the country, and which we never made any discovery of, having little in our view but the getting what little share of gold the poor people had about them. Whereas had we taken possession of the place, and left a number of men sufficient to support themselves, in making a farther search, I cannot doubt but there must be a great deal of that of which the inactive Indians had gotten but a little.

Nor had we one skilful man among us to view the face of the earth, and see what treasure of choice vegetables might be there. We had indeed six very good surgeons, and one of them, whom we took in among the Madagascar men, was a man of great reading and judgment; but he acknowledged he had no skill in botanics, having never made it his study.

But to say the truth, our doctors themselves (so we call the surgeons at sea) were so taken up in their traffick for gold, that they had no leisure to think of anything else. They did indeed pick up some shells, and some strange figured skeletons of fishes and small beasts, and other things, which they esteemed as rarities; but they never went a simpling, as we call it, or to inquire what the earth brought forth that was rare, and not to be found anywhere else.

I think, likewise, it is worth observing, how the people we met with, where it is probable no ships, much less European ships, had ever been, and where they had never conversed with enemies, or with nations accustomed to steal and plunder; I say, the people who lived thus, had no fire, no rage in their looks, no jealous fears of strangers doing them harm, and consequently no desire to do harm to others. They had bows and arrows indeed, but it was rather to kill the deer and fowls, and to provide themselves with food, than to offend their enemies, for they had none.

When, therefore, removing from thence, we came to other and different nations, who were ravenous and mischievous, treacherous and fierce, we concluded they had conversed with other nations, either by going to them, or their vessels coming there. And to confirm me in this opinion, I found these fierce false Indians had canoes and boats, some of one

kind, and some of another, by which perhaps, they conversed with the islands or other nations near them, and that they also received ships and vessels from other nations, by which they had several occasions to be upon their guard, and learned the treacherous and cruel parts from others which nature gave them no ideas of before.

As the natives of these places were tractable and courteous, so they would be made easily subservient and assistant to any European nation that would come to make settlements among them, especially if those European nations treated them with humanity and courtesy; for I have made it a general observation, concerning the natural disposition of all the savage nations that ever I met with, that if they are once but really obliged they will always be very faithful.

But it is our people, I mean the Europeans, who, by breaking faith with them, teach them ingratitude, and inure them to treat their new comers with breach of faith, and with cruelty and barbarity. If you once win them by kindness, and doing them good, I mean at first, before they are taught to be rogues by example, they will generally be honest, and be kind also, to the uttermost of their power.

It is to be observed, that it has been the opinion of all the sailors who have navigated those parts of the world, that farther south there are great tracts of undiscovered land; and some have told us they have seen them, and have called them by such and such name, as, particularly, the Isles of Solomon, of which yet we can read of nobody that ever went on shore on them, or that could give any account of them, except such as are romantic, and not to be depended upon.

But what has been the reason why we have hitherto had nothing but guesses made at those things, and that all that has been said of such lands has been imperfect? The reason, if I may speak my opinion, has been, because it is such a prodigious run from the coast of America to the islands of the Ladrones, that the few people who have performed it never durst venture to go out of the way of the trade-winds, lest they should not be able to subsist for want of water and provisions; and this is particularly the case in the voyage from the coast of America only.

Whereas, to go the way which I have marked out, had we seen a necessity, and that there was no land to be found to the south of the tropic for a supply of provisions and fresh water,

it is evident we could have gone back again, from one place to another, and have been constantly supplied; and this makes it certain also, that it cannot be reasonably undertaken by a ship going from the east, I mean the coast of America, to the west; but, from the west, viz., the Spice Islands to America west, it may be adventured with ease, as I have shown.

It is true, that William Cornelius Van Schouten and Francis le Maire, who first found the passage into the South Sea by Cape Horn, and not to pass the Straits of Magellan, I say, they did keep to the southward of the tropic, and pass in part the same way I have here given an account of, as by their journals, which I have by me at this time, is apparent.

And it is as true also, that they did meet with many islands and unknown shores in those seas, where they got refreshment, especially fresh water: perhaps some of the places were the same I have described in this voyage, but why they never pursued that discovery, or marked those islands and places they got refreshments at, so that others in quest of business might have touched at them and have received the like benefit, that I can give no account of.

I cannot help being of opinion, let our map makers place them where they will, that those islands where we so successfully fished for oysters, or rather for pearl, are the same which the ancient geographers have called Solomon's Islands; and though they are so far south, the riches of them may not be the less, nor are they more out of the way. On the contrary, they lie directly in the track which our navigators would take, if they thought fit, either to go or come between Europe and the East Indies, seeing they that come about Cape Horn seldom go less south than the latitude of 63 or 64° ; and these islands, as I have said, lie in the latitude of 40 to 48° south, and extend themselves near one hundred and sixty leagues in breadth from north to south.

Without doubt those islands would make a very noble settlement, in order to victual and relieve the European merchants in so long a run as they have to make; and when this trade came to be more frequented, the calling of those ships there would enrich the islands, as the English at St. Helena are enriched by the refreshing which the East India ships find that meet there.

But to return to our present situation at Juan Fernandez.

The refreshment which our men found here greatly encouraged and revived them; and the broths and stewings which we made of the goats' flesh which we killed there, than which nothing could be wholesomer, restored all our sick men, so that we lost but two men in our whole passage from the East Indies, and had lost but eight men in our whole voyage from England, except I should reckon those five men and a boy to be lost which run away from us in the country among the Indians, as I have already related.

I should have added, that we careened and cleaned our ships here, and put ourselves into a posture for whatever adventures might happen; for as I resolved upon a trading voyage upon the coast of Chili and Peru, and a cruising voyage also, as it might happen, so I resolved also to put our ships into a condition for both, as occasion should present.

Our men were nimble at this work, especially having been so well refreshed and heartened up by their extraordinary supply of fresh meats, and the additions of good broths and soups which they fed on every day in the island, and with which they were supplied without any manner of limitation all the time they were at work.

This I say being their case, they got the Madagascar ship hauled down, and her bottom washed and tallowed, and she was as clean as when she first came off the stocks in five days' time: and she was rigged, and all set to rights, and fit for sailing in two more.

The great ship was not so soon fitted, nor was I in so much haste, for I had a design in my head which I had not yet communicated to anybody, and that was to send the Madagascar ship a-cruising as soon as she was fitted up; accordingly, I say, the fifth day she was ready, and I managed it so that the captain of the Madagascar ship openly, before all the men, made the motion, as if it had been his own project, and desired I would let him go and try his fortune, as he called it.

I seemed unwilling at first, but he added to his importunity, that he and all his crew were desirous, if they made any purchase, it should be divided among all the crews in shares, according as they were shipped; that if it was provisions, the captain should buy it at half price, for the use of the whole, and the money to be shared.

Upon hearing his proposals, which were esteemed very

just, and the men all agreeing, I gave consent, and so he had my orders and instructions, and leave to be out twelve days on his cruise, and away he went. His ship was an excellent sailer, as has been said, and being now a very clean vessel, I thought he might speak with any other, or get away from her if he pleased; by the way, I ordered him to put out none but French colours.

He cruised a week without seeing a sail, and stood in quite to the Spanish shore in one place, but in that he was wrong. The eighth day, giving over all expectations, he stood off again to sea, and the next morning he spied a sail, which proved to be a large Spanish ship, and that seemed to stand down directly upon him, which a little checked his forwardness; however, he kept on his course, when the Spaniard seeing him plainer than probably he had done at first, tacked, and crowding all the sail he could carry, stood in for the shore.

The Spaniard was a good sailer, but our ship plainly gained upon her, and in the evening came almost up with her; when he saw the land, though at a great distance, he was loath to be seen chasing her from the shore; however, he followed, and night coming on, the Spaniard changed his course, thinking to get away, but as the moon was just rising, our men, who resolved to keep her in sight, if possible, perceived her, and stretched after her with all the canvass they could lay on.

This chase held till about midnight, when our ship coming up with her, took her after a little dispute. They pretended, at first, to have nothing on board but timber, which they were carrying, as they said, to some port for the building of ships; but our men had the secret to make the Spaniards confess their treasure, if they had any, so that after some hard words with the Spanish commander, he confessed he had some money on board, which, on our men's promise of good usage, he afterwards very honestly delivered, and which might amount to about sixteen thousand pieces of eight.

But he had what we were very glad of besides, viz., about two hundred great jars of very good wheat flour, a large quantity of oil, and some casks of sweetmeats, all which was to us very good prize.

But now our difficulty was, what we should do with the ship, and with the Spaniards; and this was so real a difficulty that I began to wish he had not taken her, lest her being

suffered to go, she should alarm the country, or if detained, discover us all.

It was not above one day beyond his orders that we had the pleasure of seeing the captain of the Madagascar come into the road, with his prize in tow, and the flour and oil was a very good booty to us ; but upon second and better thoughts, we brought the Spaniards to a fair treaty, and, which was more difficult, brought all our men to consent to it. The case was this. Knowing what I proposed to myself to do, namely, to trade all the way up the Spanish coast, and to pass for French ships, I knew the taking this Spanish ship would betray us all, unless I resolved to sink the ship and murder all the men ; so I came to a resolution of talking with the Spanish captain, and making terms with him, which I soon made him very glad to accept of.

First, I pretended to be angry with the captain of the Madagascar ship, and ordered him to be put under confinement, for having made a prize of his catholic majesty's subjects, we being subjects to the king of France, who was in perfect peace with the king of Spain.

Then I told him that I would restore him his ship and all his money, and as to his flour and oil, which the men had fallen greedily upon, having a want of it, I would pay him the full value in money for it all, and for any other loss he had sustained, only that I would oblige him to lie in the road at the island where we were, till we returned from our voyage to Lima, whither we were going to trade, for which lying I also agreed to pay him demurrage for his ship, after the rate of eight hundred pieces of eight per month, and if I returned not in four months, he was to be at his liberty to go.

The captain, who thought himself a prisoner and undone, readily embraced this offer ; and so we secured his ship till our return, and there we found him very honestly at an anchor, of which I shall give a farther account in its place.

We were now, as I have said, much about the middle of our voyage, at least as I had intended it ; and having stored ourselves with every thing the place afforded, we got ready to proceed, for we had, as it were, dwelt here near a fortnight.

By this time the weather was good again, and we stood away to the south-east for the port of Baldivia, as above,

and reached to the mouth of the harbour in twelve days' sail.

I was now to change faces again, and Captain Merlotte appeared as captain, all things being transacted in his name, and French captains were put into the brigantine, and into the Madagascar ship also. The first thing the captain did was to send a civil message to the Spanish governor, to acquaint him, that being come into those seas as friends, under his most Christian majesty's commission, and with the king of Spain's permission, we desired to be treated as allies, and to be allowed to take water and wood, and to buy such refreshments as we wanted, for which we would pay ready money; also we carried French colours, but took not the least notice of our intention to trade with them.

We received a very civil answer from the governor, viz., That being the king of France's subjects, and that they were in alliance with us, we were very welcome to wood and water, and any provision the place would afford, and that our persons should be safe, and in perfect liberty to go on shore; but that he could not allow any of our men to lie on shore, it being express in his orders that he should not permit any nation not actually in commission from the king of Spain to come on shore and stay there, not even one night; and that this was done to prevent disorders.

We answered, that we were content with that order, seeing we did not desire our men should go on shore to stay there, we not being able to answer for any misbehaviour, which was frequent among seamen.

While we continued here, several Spaniards came on board and visited us, and we often went on shore on the same pretence; but our supercargo, who understood his business too well not to make use of the occasion, presently let the Spaniards see that he had a great cargo of goods to dispose of; they as freely took the hint, and let him know that they had money enough to pay for whatever they bought; so they fell to work, and they bought East India and China silks, Japan ware, China ware, spice, and something of everything we had. We knew we should not sell all our cargo here, nor any extraordinary quantity; but we knew, on the other hand, that, what we did sell here, we should sell for 100% per cent. extraordinary, I mean more than we should sell for at Lima, or any other ports on that side, and

so we did; for here we sold a bottle of arrack for four pieces of eight, a pound of cloves for five pieces of eight, and a pound of nutmegs for six pieces of eight; and the like of other things.

They would gladly have purchased some European goods, and especially English cloth and baize; but as we had indeed very few such things left, so we were not willing they should see them, that they might not have any suspicion of our being Englishmen, and English ships, which would soon have put an end to all our commerce.

While we lay here trafficking with the Spaniards, I set some of my men to work to converse among the native Chilians, or Indians, as we call them, of the country, and several things they learned of them, according to the instructions which I gave them; for example, first, I understood by them that the country people, who do not live among the Spaniards, have a mortal aversion to them; that it is rivetted in their minds by tradition from father to son, ever since the wars which had formerly been among them, and that though they did not now carry on those wars, yet the animosity remained; and the pride and cruel haughty temper of the Spaniards were such still to those of the country people who came under their government, as make that aversion continually increase. They let us know, that if any nation in the world would but come in and assist them against the Spaniards, and support them in their rising against them, they would soon rid their hands of the whole nation. This was to the purpose exactly, as to what I wanted to know.

I then ordered particular inquiry to be made, whether the mountains of Andes, which are indeed prodigious to look at, and so frightful for their height, that it is not to be thought of without some horror, were in any places passable? what country there was beyond them? and whether any of their people had gone, over and knew the passages?

The Indians concurred with the Spaniards in this (for our men inquired of both), that though the Andes were to be supposed, indeed, to be the highest mountains in the world, and that, generally speaking, they were impassable, yet that there had been passages found by the vales among the mountains; where, with fetching several compasses and windings, partly on the hills, and partly in the valleys, men went with a great deal of ease and safety quite through or over, call it

as we will, to the other, named the east side, and as often returned again.

Some of the more knowing Indians or Chilians went farther than this, and when our men inquired after the manners, situation, and produce of the country on the other side, they told them, that when they passed the mountains from that part of the country, they went chiefly to fetch cattle and kill deer, of which there were great numbers in that part of the land; but that when they went from St. Jago they turned away north some leagues, when they came to a town called St. Anthonio de los Vejos, or, the town of St. Anthony and the Old Men; that there was a great river at that city, from whence they found means to go down to the Rio de la Plata, and so to the Buenos Ayres, and that they frequently carried thither great sums of money in Chilian gold, and brought back European goods from thence.

I had all I wanted now, and bade my men say no more to them on that subject, and only to tell them, that they would come back and travel a little that way to see the country. The people appeared very well pleased with this intelligence, and answered, that if they would do so, they should find some, as well Spaniards as Chilians, who would be guides to them through the hills; also assuring them, that they would find the hills very practicable, and the people as they went along very ready to assist and furnish them with whatever they found they wanted, especially if they come to know that they were not Spaniards, or that they would protect them from the Spaniards, which would be the most agreeable thing to them in the world; for it seems many of the nations of the Chilians had been driven to live among the hills, and some even beyond them, to avoid the cruelty and tyranny of the Spaniards, especially in the beginning of their planting in that country.

The next inquiry I ordered them to make was, whether it was possible to pass those hills with horses or mules, or any kind of carriages? and they assured them, they might travel with mules, and even with horses also, but rather with mules; but as to carriages, such as carts or waggons, they allowed that was not practicable. They assured us, that some of those ways through the hills were much frequented, and that there were towns, or villages rather, of people to be found in the valleys between the said hills; some of which villages

were very large, and the soil very rich and fruitful, bearing sufficient provisions for the inhabitants, who were very numerous. They added, that the people were not much inclined to live in towns as the Spaniards do, but that they lived scattered up and down the country, as they were guided by the goodness of the land; that they lived very secure and unguarded, never offering any injury to one another, nor fearing injury from any but the Spaniards.

I caused these inquiries to be made with the utmost prudence and caution, so that the Spaniards had not the least suspicion of our design; and thus, having finished our traffick, and taken in water and provisions, we sailed from Baldivia, having settled a little correspondence there with two Spaniards, who were very faithful to us, and with two Chilian Indians, whom we had in a particular manner engaged, and whom, to make sure of, we took along with us; and having spent about thirteen days here, and taken the value of about six thousand pieces of eight in silver and gold, but most of it in gold, we set sail.

Our next port was the Bay of the Conception; here, having two or three men on board who were well acquainted with the coast, we ran boldly into the bay, and came to an anchor in that which they call the Bite, or little bay, under the island Quiriquina; and from thence we sent our boat, with French mariners to row, and a French cockswain, with a letter to the Spanish governor, from Captain Merlotte. Our pretence was always the same as before, that we had his most Christian majesty's commission, &c., and that we desired liberty to wood and water, and to buy provisions, having been a very long voyage, and the like.

Under these pretences, we lay here about ten days, and drove a very considerable trade for such goods as we were sure they wanted; and having taken about the value of eight thousand pieces of eight, we set sail for the port or river that goes up to St. Jago, where we expected a very good market, being distant from the Conception about sixty-five leagues.

St. Jago is the capital city of Chili, and stands twelve leagues within the land; there are two ports, which are made use of to carry on the traffic of this place, viz., R. de Ropocalmo, and port de Valparaiso. We were bound to the last, as being the only port for ships of burden, and where there is security from bad weather.

We found means here, without going up to the city of St. Jago, to have merchants enough to come down to us; for this being a very rich city, and full of money, we found all our valuable silks of China, our atlases, China damasks, satins, &c., were very much valued, and very much wanted, and no price was too high for us to ask for them. For, in a word, the Spanish ladies, who, for pride, do not come behind any in the world, whatever they do for beauty, were so eager for those fine things, that almost any reasonable quantity might have been sold there; but the truth is, we had an unreasonable quantity, and therefore, as we had other markets to go to, we did not let them know what a great stock of goods we had, but took care they had something of everything they wanted. We likewise found our spices were an excellent commodity in those parts, and sold for a great profit too, as indeed everything else did, as is said above.

We found it very easy to sell here to the value of one hundred and thirty thousand pieces of eight, in all sorts of China and East-India goods; for still, though we had some of the English cargo loose, we let none of it be seen. We took most of the money in gold uncoined, which is got out of the mountains in great quantities, and of which we shall have occasion to speak more hereafter.

Our next trading port was Coquimbo, a small town but a good port. Here we went in without ceremony, and upon the same foot, of being French, we were well received, traded underhand with the Spanish merchants, and got letters to some other merchants at Guasco, a port in a little bay about fifteen leagues north from Coquimbo.

From hence to the port of Copiapo, is twenty-five leagues. Here we found a very good port, though no trading town or city; but the country being well inhabited, we found means to acquaint some of the principal Spaniards in the country of what we were, and (with which they were pleased well enough) that they might trade with us for such things, which it was easy to see they gave double price for to the merchants who came from Lima, and other places. This brought them to us with so much eagerness, that though they bought for their own use, not for sale, yet they came furnished with orders, perhaps for two or three families together, and being generally rich, would frequently lay out six hundred or eight hundred pieces of eight a man; so that we had a most

excellent market here, and took above thirty thousand pieces of eight; that is to say, the value of it, for they still paid all in gold.

Here we had opportunity to get a quantity of good flour, or wheat meal, of very good European wheat, that is to say, of that sort of wheat; and withal, had good biscuit baked on shore, so that now we got a large recruit of bread, and our men began to make puddings, and lived very comfortably. We likewise got good sugar at the ingenioes, or sugar-mills, of which there were several here, and the farther north we went their number increased, for we were now in the latitude of $28^{\circ} 2'$ south.

We had but one port now of any consequence that we intended to touch at, until we came to the main place we aimed at, which was Lima, and this was about two-thirds of the way thither; I mean Porto Rica, or Arica, which is in the latitude of 18° of thereabouts. The people were very shy of us here, as having been much upon their guard for some years past, for fear of buccaneers and English privateers: but when they understood we were French, and our French captain sent two recommendations to them from a merchant at St. Jago, they were then very well satisfied, and we had full freedom of commerce here also.

From hence we came the height of Lima, the capital port, if not the capital city, of Peru, lying in the latitude of $12^{\circ} 30'$. Had we made the least pretence of trading here, we should, at least, have had soldiers put on board our ships to have prevented it, and the people would have been forbidden to trade with us upon pain of death. But Captain Merlotte having brought letters to a principal merchant of Lima, he instructed him how to manage himself at his first coming into that port; which was to ride without the town of Callao, out of the command of the puntals or castles there, and not to come any nearer, upon what occasion soever, and then to leave the rest to him.

Upon this, the merchant applied himself to the governor for leave to go on board the French ship at Callao; but the governor understood him, and would not grant it by any means. The reason was, because there had been such a general complaint by the merchants from Carthagena, Porto Bello, and other places, of the great trade carried on here with French ships from Europe, to the destruction of the

merchants, and to the ruin of the trade of the galleons, that the governor, or viceroy of Peru, had forbid the French ships landing any goods.

Now, though this made our traffick impracticable at Lima itself, yet it did by no means hinder the merchants trading with us under cover, &c., but especially when they came to understand that we were not loaden from Europe with baize, long ells, druggets, broadcloth, serges, stuffs, stockings, hats, and such like woollen manufactures of France, England, &c.; but that our cargo was the same with that of the Manilla ships at Acapulca, and that we were loaden with calicoes, muslins, fine-wrought China silks, damasks, Japan wares, China wares, spices, &c., there was then no withholding them: but they came on board us in the night with canoes, and, staying all day, went on shore again in the night, carrying their goods to different places, where they knew they could convey them on shore without difficulty.

In this manner we traded publicly enough, not much unlike the manner of our trade at the Manillas; and here we effectually cleared ourselves of our whole cargo, as well English goods as Indian, to an immense sum. Here our men, officers as well as seamen, sold their fine pearl, particularly one large parcel, containing one hundred and seventy-three very fine pearls, but of different sizes, which a priest bought, as we are told, to dress up the image of the blessed Virgin Mary in one of their churches.

In a word, we came to a balance here, for we sold everything that we had the least intencion to part with; the chief things we kept in reserve, were some bales of English goods, also all the remainder of our beads and bugles, toys, iron-work, knives, scissors, hatchets, needles, pins, glass-ware, and such things as we knew the Spaniards did not regard, and which might be useful in our farther designs, of which my head was yet very full. Those, I say, we kept still.

Here, likewise, we sold our brigantine, which, though an excellent sea-boat, as may well be supposed, considering the long voyage we had made in her, was yet so worm-eaten in her bottom, that, unless we would have new sheathed her, and perhaps shifted most of her planks too, which would have taken up a great deal of time, she was by no means fit to have gone any farther, at least not so long a run as we had now to make, viz., round the whole southern part of

America, and where we should find no port to put in at, (I mean, where we should have been able to have got anything done for the repair of a ship), until we had come home to England.

It was proposed here to have gone to the governor or viceroy of Peru, and have obtained his license or pass to have traversed the Isthmus of America, from port St. Maria to the river of Darien. This we could easily have obtained under the character that we then bore, viz., of having the King of France's commission; and had we been really all French, I believe I should have done it, but as we were so many Englishmen, and as such were then at open war with Spain, I did not think it a safe adventure, I mean not a rational adventure, especially considering what a considerable treasure we had with us.

On the other hand, as we were now a strong body of able seamen, and had two stout ships under us, we had no reason to apprehend either the toil or the danger of a voyage round Cape Horn, after which we should be in a very good condition to make the rest of our voyage to England. Whereas, if we travelled over the Isthmus of America, we should be all like a company of freebooters and buccaneers, loose and unshipped, and should perhaps run some one way and some another, among the logwood cutters at the bay of Campeachy, and other places, to get passage, some to Jamaica and some to New England; and, which was worse than all, should be exposed to a thousand dangers on account of the treasure we had with us, perhaps even to that of murdering and robbing one another. And, as Captain Merlotte said, who was really a Frenchman, it were much more eligible for us, as French, or, if we had been such, to have gone up to Acapulca, and there to sell our ships and get license to travel to Mexico, and then to have got the viceroy's assiento to have come to Europe in the galleons; but, as we were so many Englishmen, it was impracticable; our seamen also being Protestants, such as seamen generally are, and bold mad fellows, they would never have carried on a disguise, both of their nation and of their religion, for so long a time as it would have been necessary to do for such a journey and voyage.

But, besides all these difficulties, I had other projects in my head, which made me against all the proposals of passing by land to the North Sea; otherwise, had I resolved it, I

should not have much concerned myself about obtaining a license from the Spaniards, for, as we were a sufficient number of men to have forced our way, we should not much have stood upon their giving us leave, or not giving us leave, to go.

But, as I have said, my views lay another way, and my head had been long working upon the discourse my men had had with the Spaniards at Baldavia. I frequently talked with the two Chilian Indians whom I had on board, and who spoke Spanish pretty well, and whom we had taught to speak a little English.

I had taken care that they should have all the good usage imaginable on board. I had given them each a very good suit of clothes made by our tailor, but after their own manner, with each of them a baize cloak; and had given them hats, shoes, stockings, and everything they desired, and they were mighty well pleased, and I talked very freely with them about the passage of the mountains, for that was now my grand design.

While I was coming up the Chilian shore, as you have heard, that is to say, at St. Jago, at the Conception, at Arica, and even at Lima itself, we inquired on all occasions into the situation of the country, the manner of travelling, and what kind of country it was beyond the mountains, and we found them all agreeing in the same story; and that passing the mountains of Les Cordelieras, for so they call them in Peru, though it was the same ridge of hills as we call the Andes, was no strange thing. That there were not one or two, but a great many places found out, where they passed as well with horses and mules as on foot, and even some with carriages; and, in particular, they told us at Lima, that from Potosi, and the towns thereabouts, there was a long valley, which ran for one hundred and sixty leagues in length southward, and south-east, and that it continued until the hills parting, it opened into the main level country on the other side; and that there were several rivers which began in that great valley, and which all of them ran away to the south and south-east, and afterwards went away east, and east-north-east, and so fell into the great Rio de la Plata, and emptied themselves into the North Seas; and that merchants travelled to those rivers, and then went down in boats as far as the town or the city of the Ascension, and the Buenos Ayres.

This was very satisfying you may be sure, especially to hear them agree in it, that the Andes were to be passed; though passing them hereabouts, (where I knew the mainland from the west shore, where we now were, must be at least one thousand five hundred miles broad), was no part of my project; but I laid up all these things in my mind, and resolved to go away to the south again, and act as I should see cause.

We were now got into a very hot climate, and, whatever was the cause, my men began to grow very sickly, and that to such a degree that I was once afraid we had got the plague among us; but our surgeons, who we all call doctors at sea, assured me there was nothing of that among them, and yet we buried seventeen men here, and had between twenty and thirty more sick, and, as I thought, dangerously too.

In this extremity, for I was really very much concerned about it, one of my doctors came to me, and told me he had been at the city (that is, at Lima) to buy some drugs and medicines to recruit his chest, and he had fallen into company with an Irish Jesuit, who, he found, was an extraordinary good physician, and that he had had some discourse with him about our sick men, and he believed for a good word or two, he could persuade him to come and visit them.

I was very loath to consent to it, and said to the surgeon, If he is an Irishman, he speaks English, and he will presently perceive that we are all Englishmen, and so we shall be betrayed; all our designs will be blown up at once, and our farther measures be all broken; and therefore I would not consent. This I did not speak from the fear of any hurt they could have done me by force, for I had no reason to value that, being able to have fought my way clear out of their seas, if I had been put to it; but, as I had traded all the way by stratagem, and had many considerable views still behind, I was unwilling to be disappointed by the discovery of my schemes, or that the Spaniards should know upon what a double foundation I acted, and how I was a French ally and merchant, or an English enemy and privateer, just as I pleased, and as opportunity should offer; in which case they would have been sure to have trepanned me if possible, under pretence of the former, and have used me, if they ever should get an advantage over me, as one of the latter.

This made me very cautious, and I had good reason for it too; and yet the sickness and danger of my men pressed me very hard to have the advice of a good physician, if it was possible, and especially to be satisfied whether it was really the plague or no, for I was very uneasy about that.

But my surgeon told me, that, as to my apprehension of discovery, he would undertake to prevent it by this method. First, he said, he found that the Irishman did not understand French at all, and so I had nothing to do but to order, that, when he came on board, as little English should be spoke in his hearing as possible; and this was not difficult, for almost all our men had a little French at their tongue's end, by having so many Frenchmen on board of them; others had the Levant jargon, which they call *Lingua Frank*; so that, if they had but due caution, it could not be suddenly perceived what countrymen they were.

Besides this, the surgeon ordered, that as soon as the Padre came on board, he should be surrounded with French seamen only, some of whom should be ordered to follow him from place to place, and chop in with their nimble tongues, upon some occasion or other, so that he should hear French spoken wherever he turned himself.

Upon this, which indeed appeared very easy to be done, I agreed to let the doctor come on board, and accordingly the surgeon brought him the next day, where Captain Merlotte received him in the cabin, and treated him very handsomely, but nothing was spoken but French or Spanish; and the surgeon, who had pretended himself to be an Irishman, acted as interpreter between the doctor and us.

Here we told him the case of our men that were sick; some of them, indeed, were French, and others that could speak French, were instructed to speak to him as if they could speak no other tongue, and those the surgeon interpreted; others, who were English, were called Irishmen, and two or three were allowed to be English seamen picked up in the East Indies, as we had seamen, we told him, of all nations.

The matter, in short, was so carried that the good man, for such I really think he was, had no manner of suspicion; and, to do him justice, he was an admirable physician, and did our men a great deal of good; for all of them, excepting three, recovered under his hands, and those three had re-

covered if they had not, like madmen, drank large quantities of punch when they were almost well; and, by their intemperance, inflamed their blood, and thereby thrown themselves back again into their fever, and put themselves, as the Padre said of them, out of the reach of medicine.

We treated this man of art with a great deal of respect, made him some very handsome presents, and particularly such as he could not come at in the country where he was; besides which, I ordered he should have the value of one hundred dollars in gold given him; but he, on the other hand, thanking Captain Merlotte for his bounty, would have no money, but he accepted a present of some linen, a few handkerchiefs, some nutmegs, and a piece of black baize: most of which, however, he afterwards said, he made presents of again in the city, among some of his acquaintance.

But he had a farther design in his head, which, on a future day, he communicated in confidence to the surgeon I have mentioned, who conversed with him, and by him to me, and which was to him, indeed, of the highest importance. The case was this.

He took our surgeon on shore with him one day from the Madagascar ship, where he had been with him to visit some of our sick men, and, drinking a glass of wine with him, he told him he had a favour to ask of him, and a thing to reveal to him in confidence, which was of the utmost consequence to himself though of no great value to him, (the surgeon), and, if he would promise the utmost secrecy to him, on his faith and honour, he would put his life into his hands. For, seignior, said he, it will be no other, nor would anything less than my life pay for it, if you should discover it to any of the people here, or anywhere else on this coast.

The surgeon was a very honest man, and carried indeed the index of it in his face; and the Padre said afterwards, he inclined to put this confidence in him because he thought he saw something of an honest man in his very countenance. After so frank a beginning, the surgeon made no scruple to tell him, that, seeing he inclined to treat him with such confidence, and to put a trust of so great importance in him, he would give him all the assurance in his power that he would be as faithful to him as it was possible to be to himself, and that the secret should never go out of his mouth to any one in the world, but to such and at such time as he should con-

sent to and direct. In short, he used so many solemn protestations, that the Padre made no scruple to trust him with the secret, which, indeed, was no less than putting his life into his hands. The case was this.

He told him he had heard them talk of going to Ireland in their return, and, as he had been thirty years out of his own country, in such a remote part of the world, where it was never likely that he should ever see it again, the notion he had entertained that this ship was going thither, and might set him on shore there, that he might once more see his native country, and his family and friends, had filled his mind with such a surprising joy, that he could no longer contain himself; and that, therefore, if he would procure leave of the captain that he might come privately on board and take his passage home, he would willingly pay whatever the captain should desire of him, but that it must be done with the greatest secrecy imaginable, or else he was ruined; for that, if he should be discovered and stopped, he should be confined in the Jesuit's house there as long as he lived, without hope of redemption.

The surgeon told him the thing was easy to be done if he would give him leave to acquaint one man in the ship with it, which was not Captain Merlotte, but a certain Englishman, who was a considerable person in the ship, without whom the captain did nothing, and who would be more secure to trust, by far, than Captain Merlotte. The Padre told him, that, without asking him for any reasons, since he had put his life and liberty in his hands, he would trust him with the management of the whole, in whatever way he chose to conduct it.

The surgeon accordingly brought him on board to me, and making a confidence of the whole matter to me, I turned to the Padre, and told him in English, giving him my hand, that I would be under all the engagements and promises of secrecy that our surgeon had been in, for his security and satisfaction; that he had merited too well of us to wish him any ill, and, in short, that the whole ship should be engaged for his security. That, as to his coming on board and bringing anything off that belonged to him, he must take his own measures, and answer to himself for the success; but that, after he was on board, we would sink the ship under him,

or blow her aloft in the air, before we would deliver him up on any account whatever.

He was so pleased with my frank way of talking to him, that he told me he would put his life into my hands with the same freedom as he had done before with my surgeon; so we began to concert measures for his coming on board with secrecy.

He told us there was no need of any proposals, for he would acquaint the head of the house that he intended to go on board the French ship in the road, and to go to St. Jago, where he had several times been in the same manner; and that, as they had not the least suspicion of him, he was very well satisfied that they would make no scruple of it.

But his mistake in this might have been his ruin; for though, had it been a Spanish ship, they would not have mistrusted him, yet, when he named the French ship in the road of Callao, they began to question him very smartly about it. Upon which, he was obliged to tell them, that, since they were doubtful of him, he would not go at all, telling them withal, that it was hard to suspect him, who had been so faithful to his vows, as to reside for near thirty years among them, when he might frequently have made an escape from them, if he had been so disposed. So, for three or four days, he made no appearance of going at all; but having had private notice from me the evening before we sailed, he found means to get out of their hands, came down to Callao on a mule in the night, and our surgeon, lying ready with our boat about half a league from the town, as by appointment, took him on board, with a negro, his servant, and brought him safe to the ship; nor had we received him on board half an hour, but, being unmoored and ready to sail, we put out to sea, and carried him clear off.

He made his excuses to me that he was come away naked, according to his profession; that he had purposed to have furnished himself with some provisions for the voyage, but that the unexpected suspicions of the head of their college, or house, had obliged him to come away in a manner that would not admit of it; for that he might rather be said to have made his escape than to have come fairly off.

I told him he was very welcome (and indeed so he was, for he had been already more worth to us than ten times his

passage came to), and that he should be entered into immediate pay, as physician to both the ships, which I was sure none of our surgeons would repine at, but rather be glad of; and accordingly I immediately ordered him a cabin, with a very good apartment adjoining to it, and appointed him to eat in my own mess whenever he pleased, or by himself, on his particular days, when he thought proper.

And now it was impossible to conceal from him that we were indeed an English ship, and that I was the captain in chief, except, as has been said, upon occasion of coming to any particular town of Spain. I let him know I had a commission to make prize of the Spaniards, and appear their open enemy, but that I had chosen to treat them as friends, in a way of commerce, as he had seen. He admired much the moderation I had used, and how I had avoided enriching myself with the spoil, as I might have done; and he made me many compliments upon that head, which I excused hearing, and begged him to forbear. I told him we were Christians, and as we had made a very prosperous voyage, I was resolved not to do any honest man the least injustice, if I could avoid it.

But I must observe here, that I did not enter immediately into all this confidence with him neither, nor all at once; neither did I let him into any part of it, but under the same solemn engagements of secrecy that he had laid upon us, nor till I was come above eighty leagues south from Lima.

The first thing I took the freedom to speak to him upon was this. Finding his habit a little offensive to our rude seamen, I took him into the cabin the very next day after we came to sea, and told him that I was obliged to mention to him what I knew he would soon perceive; namely, that we were all Protestants, except three or four of the Frenchmen, and I did not know how agreeable that might be to him. He answered, he was not at all offended with that part; that it was none of his business to inquire into any one's opinion any farther than they gave him leave; that if it was his business to cure the souls of men on shore, his business on board was to cure their bodies; and as for the rest, he would exercise no other function than that of a physician on board the ship without my leave.

I told him that was very obliging; but that for his own sake I had a proposal to make him, which was, whether it

would be disagreeable to him to lay aside the habit of a religious, and put on that of a gentleman, so to accommodate himself the more easily to the men on board, who perhaps might be rude to him in his habit, seamen being not always men of the most refined manners.

He thanked me very sincerely ; told me that he had been in England as well as in Ireland, and that he went dressed there as a gentleman, and was ready to do so now, if I thought fit, to avoid giving any offence ; and added that he chose to do so. But then, smiling, said he was at a great loss, for he had no clothes. I bade him take no care about that, for I would furnish him ; and immediately we dressed him up like an Englishman, in a suit of very good clothes, which belonged to one of our midshipmen who died. I gave him also a good wig and a sword, and he presently appeared upon the quarter-deck like a grave physician, and was called doctor.

From that minute, by whose contrivance we knew not, it went current among the seamen that the Spanish doctor was an Englishman and a protestant, and only had put on the other habit to disguise himself and make his escape to us ; and this was so universally believed that it held to the last day of the whole voyage, for as soon as I knew it, I took care that nobody should ever contradict it : and as for the doctor himself, when he first heard of it, he said nothing could be more to his satisfaction, and that he would take care to confirm the opinion of it among all the men, as far as lay in his power.

However, the doctor earnestly desired we would be mindful, that as he should never offer to go on shore, whatever port we came to afterwards, none of the Spaniards might, by inquiry, hear upon any occasion of his being on board our ship ; but above all, that none of our men, the officers especially, would ever come so much in reach of the Spaniards on shore as to put it in their power to seize upon them by reprisal, and so oblige us to deliver him up by way of exchange.

I went so far with him, and so did Captain Merlotte also, as to assure him, that if the Spaniards should by any stratagem, or by force, get any of our men, nay, though it were ourselves, into their hands, yet he should, upon no conditions whatever be delivered up. And indeed for this very reason we were very shy of going on shore at all ; and as we had really no

business any where but just for water and fresh provisions, which we had also taken in a very good store of at Lima, so we put in nowhere at all on the coast of Peru, because there we might have been more particularly liable to the impertinencies of the Spaniards' inquiry; as to force, we were furnished not to be in the least apprehensive of that.

Being thus, I say, resolved to have no more to do with the coast of Peru, we stood off to sea, and the first land we made was a little unfrequented island in the latitude of $17^{\circ} 13'$, where our men went on shore in the boats three or four times, to catch tortoises or turtles, being the first we had met with since we came from the East Indies. And here they took so many, and had such a prodigious quantity of eggs out of them, that the whole company of both ships lived on them till within four or five days of our coming to the island of Juan Fernandez, which was our next port. Some of these tortoises were so large and so heavy that no single man could turn them, and sometimes as much as four men could carry to the boats.

We met with some bad weather after this, which blew us off to sea, the wind blowing very hard at the south-east; but it was not so great a wind as to endanger us, though we lost sight of one another more in this storm than we had done in all our voyage. However, we were none of us in any great concern for it now, because we had agreed before, that if we should lose one another, we should make the best of our way to the island of Juan Fernandez; and this we observed now so directly, that both of us shaping our course for the island, as soon as the storm abated, came in sight of one another long before we came thither, which proved very agreeable to us all.

We were, including the time of the storm, two hundred and eighteen days from Lima to the Island of Juan Fernandez, having most of the time cross contrary winds, and more bad weather than is usual in those seas; however, we were all in good condition, both ships and men.

Here we fell to the old trade of hunting of goats. And here our new doctor set some of our men to simpling, that is to say, to gather some physical herbs, which he let them see afterwards were very well worth their while. Our surgeons assisted, and saw the plants, but had never observed the same kind in England. They gave me the names of them,

and it is the only discovery in all my travels which I have not reserved so carefully as to publish for the advantage of others, and which I regret the omission of very much.

While we were here, an odd accident gave me some uneasiness, which, however, did not come to much. Early in the grey of the morning, little wind, and a smooth sea, a small frigate-built vessel, under Spanish colours, pennant flying, appeared off at sea, at the opening of the north-east point of the island. As soon as she came fair with the road, she lay by, as if she came to look into the port only; and when she perceived that we began to loose our sails to speak with her, she stretched away to the northward, and then altering her course, stood away north-east, using oars to assist her, and so she got away.

Nothing could be more evident to us than that she came to look at us, nor could we imagine anything less; from whence we immediately concluded that we were discovered, and that our taking away the doctor had given a great alarm among the Spaniards, as we afterwards came to understand it had done. But we came a little while afterwards to a better understanding about the frigate.

I was so uneasy about it, that I resolved to speak with her if possible, so I ordered the Madagascar ship, which of the two, was rather a better sailer than our own, to stand in directly to the coast of Chili, and then to ply to the northward, just in sight of the shore, till he came into the latitude of 22° ; and, if he saw nothing in all that run, then to come down again directly into the latitude of the island of Juan Fernandez, but keeping the distance of ten leagues off farther than before, and to ply off and on in that latitude for five days; and then, if he did not meet with me, to stand in for the island.

While he did this, I did the same at the distance of near fifty leagues from the shore, being the distance which I thought the frigate kept in as she stood away from me. We made our cruise both of us very punctually; I found him in the station we agreed on, and we both stood into the road again from whence we came.

We no sooner made the road, but we saw the frigate, as I called her, with another ship at an anchor in the same road where she had seen us; and it was easy to see that they were both of them in a great surprise and hurry at our

appearing, and that they were under sail in so very little time as that we easily saw they had slipped their cables, or cut away their anchors. They fired guns twice, which we found was a signal for their boats, which were on shore, to come on board; and soon after we saw three boats go off to them, though, as we understood afterwards, they were obliged to leave sixteen or seventeen of their men behind them, who, being among the rocks catching of goats, either did not hear the signals, or could not come to their boats time enough.

When we saw them in this hurry, we thought it must be something extraordinary, and bore down upon them, having the weather-gage.

They were ships of pretty good force, and full of men, and when they saw we were resolved to speak with them, and that there was no getting away from us, they made ready to engage; and putting themselves upon a-wind, first stretching ahead to get the weather-gage of us, when they thought they were pretty well, boldly tacked, and lay by for us, hoisting the English ancient and union jack.

We had our French colours out till now; but being just, sa we thought, going to engage, I told Captain Merlotte I scorned to hide what nation I was of when I came to fight for the honour of our country; and, besides, as these people had spread English colours, I ought to let them know what I was; that, if they were really English and friends, we might not fight by mistake, and shed the innocent blood of our own countrymen; and that, if they were rogues, and counterfeited their being English, we should soon perceive it.

However, when they saw us put out English colours, they knew not what to think of it, but lay by awhile to see what we would do. I was as much puzzled as they, for, as I came nearer, I thought they seemed to be English ships, as well by their bulk as by their way of working; and as I came still nearer, I thought I could perceive so plainly by my glasses that they were English seamen, that I made a signal to our other ship, who had the van, and was just bearing down upon them, to bring to; and I sent my boat to him to know his opinion. He sent me word, he did believe them to be English; and the more, said he, because they could be no other nation but English or French, and the latter he was sure they were not; but, since we were the largest ships, and that they might as plainly see us to be English as we could see them,

he said he was for fighting them, because they ought to have let us know who they were first. However, as I had fired a gun to bring him too, he lay by a little time till we spoke thus together.

While this was doing we could see one of their boats come off with six oars and two men, a lieutenant and trumpeter it seems they were, sitting in the stern, and one of them holding up a flag of truce; we let them come forward, and when they came nearer, so that we could hail them with a speaking trumpet, we asked them what countrymen they were? and they answered Englishmen. Then we asked them whence their ship? Their answer was, from London. At which we bade them come on board, which they did; and we soon found that we were all countrymen and friends, and their boat went immediately back to let them know it. We found afterwards that they were mere privateers, fitted out from London also, but coming last from Jamaica; and we let them know no other of ourselves, but declined keeping company, telling them we were bound now upon traffick, and not for purchase; that we had been at the East Indies, had made some prizes, and were going back thither again. They told us they were come into the South Seas for purchase, but that they had made little of it, having heard there were three large French men-of-war in those seas, in the Spanish service, which made them wish they had not come about; and that they were still very doubtful what to do.

We assured them we had been the height of Lima, and that we had not heard of any men-of-war, but that we had passed for such ourselves, and perhaps were the ships they had heard of; for that we were three sail at first, and had sometimes carried French colours.

This made them very glad, for it was certainly so that we had passed for three French men-of-war, and they were so assured of it, that they went afterwards boldly up the coast, and made several very good prizes. We then found also that it was one of these ships that looked into the road, as above, when we were here before, and seeing us then with French colours, took us for the men-of-war they had heard of; and, they added, that, when we came in upon them again, they gave themselves up for lost men, but were resolved to have fought it out to the last, or rather to have sunk by our side, or blown themselves up, than be taken.

I was not at all sorry that we had made this discovery before we engaged; for the captains were two brave resolute fellows, and had two very good ships under them, one of thirty-six guns, but able to have carried forty-four; the other, which we called the frigate-built ship, carried twenty-eight guns, and they were both full of men. Now, though we should not have feared their force, yet my ease differed from what it did at first, for we had that on board that makes all men cowards, I mean money, of which we had such a cargo as few British ships ever brought out of those seas, and I was one of those that had now no occasion to run needless hazards. So that, in short, I was as well pleased without fighting as they could be; besides, I had other projects now in my head, and those of no less consequence than of planting a new world, and settling new kingdoms, to the honour and advantage of my country; and many a time I wished heartily that all my rich cargo was safe at London; that my merchants were sharing the silver and gold, and the pearl among themselves; and, that I was but safe on shore, with a thousand good families, upon the south of Chili, and about fifteen hundred good soldiers, and arms for ten thousand more, of which by and by, and, with the two ships I had now with me, I would not fear all the power of the Spaniards; I mean, that they could bring against me in the South Seas.

I had all these things, I say, in my head already, though nothing like to what I had afterwards, when I saw farther into the matter myself; however, these things made me very glad that I had no occasion to engage those ships.

When we came thus to understand one another, we went all into the road together, and I invited the captains of the two privateers on board me, where I treated them with the best I had, though I had no great dainties now, having been so long out of England. They invited me and Captain Merlotte, and the captain of the Madagascar ship in return, and, indeed, treated us very nobly.

After this, we exchanged some presents of refreshments, and, particularly, they sent me a hogshead of rum, which was very acceptable; and I sent them in return a runlet of arrack, excusing myself that I had no great store. I sent them also the quantity of one hundred weight of nutmegs and cloves; but the most agreeable present I sent them was

twenty pieces of Madagasear dried beef, cured in the sun, the like of which they had never seen or tasted before; and without question, it is such an excellent way of curing beef, that if I were to be at Madagascar again, I would take in a sufficient quantity of beef so preserved to victual the whole ship for the voyage; and I leave it as a direction to all English seamen that have occasion to use East-India voyages.

I bought afterwards six hogsheads of rum of these privateers, for I found they were very well stored with liquors, whatever else they wanted.

We stayed here twelve or fourteen days, but took care, by agreement, that our men should never go on shore the same days that their men went on shore, or theirs when ours went, as well to avoid their eaballing together, as to avoid quarrelling, though the latter was the pretence. We agreed, also, not to receive on board any of our ships respectively, any of the crews belonging to the other; and this was their advantage, for, if we would have given way to that, half their men would, for aught I know, have come over to us.

While we lay here, one of them went a-eruising, finding the wind fair to run in for the shore; and, in about five days, she came back with a Spanish prize, laden with meal, cocoa, and a large quantity of biseuit, ready baked; she was bound to Lima, from Baldivia, or some port nearer, I do not remember exactly which. They had some gold on board, but not much, and had bought their lading at St. Jago. As soon as we saw them coming in with a prize in tow, we put out our French colours, and gave notice to the privateers that it was for their advantage that we did so; and so indeed it was, for it would presently have alarmed all the country, if such a fleet of privateers had appeared on the coast. We prevailed with them to give us their Spanish prisoners, and to allow us to set them on shore, I having assured them I would not land them till I came to Baldivia, nor suffer them to have the least correspondence with anybody till they came thither; the said Spaniards also giving their parole of honour not to give any account of their being taken till fourteen days after they were on shore.

This being the farthest port south which the Spaniards are masters of in Chili, or, indeed, on the whole continent of America, they could not desire me to carry them any farther. They allowed us a quantity of meal and cocoa out of their

booty for the subsistence of the prisoners, and I bought a larger quantity besides, there being more than they knew how to stow, and they did not resolve to keep the Spanish ship which they took ; by this means I was doubly stocked with flour and bread, but, as the first was very good, and well packed in casks and very good jars, it received no injury.

We bought also some of their cocoa, and made chocolate, till our men gorged themselves with it, and would have no more.

Having furnished ourselves here with goats' flesh, as usual, and taking in water sufficient, we left Juan Fernandez, and saw the cruisers go out the same tide, they steering north-north-east, and we south-south-east. They saluted us at parting, and we bade them good-bye in the same language.

While we were now sailing for the coast of Chili, with fair wind and pleasant weather, my Spanish doctor came to me and told me he had a piece of news to acquaint me with, which, he said, he believed would please me very well ; and this was, that one of the Spanish prisoners was a planter, as it is called in the West Indies, or a farmer, as we should call it in England, of Villa Rica, a town built by the Spaniards, near the foot of the Andes, above the town of Baldivia ; and that he had entered into discourse with him upon the situation of those hills, the nature of the surface, the rivers, hollows, passages into them, &c. Whether there were any valleys within the hills, of what extent, how watered, what cattle, what people, how disposed, and the like ; and, in short, if there was any way of passing over the Andes, or hills above mentioned ; and he told me, in few words, that he found him to be a very honest, frank, open sort of a person, who seemed to speak without reserve, without the least jealousy or apprehension ; and that he believed I might have an ample discovery from him of all that I desired to know.

I was very glad of this news ; and, at my request, it was not many hours before he brought the Spaniard into the great cabin to me, where I treated him very civilly, and gave him opportunity several times to see himself very well used ; and, indeed, all the Spaniards in the ship were very thankful for my bringing them out of the hands of the privateers, and took all occasions to let us see it.

I said little the first time, but discoursed in general of America, of the greatness and opulency of the Spaniards

there, the infinite wealth of the country, &c.; and I remember well, discoursing once of the great riches of the Spaniards in America, the silver mines of Potosi, and other places, he turned short upon me, smiling, and said, We Spaniards are the worst nation in the world that such a treasure as this could have belonged to; for if it had fallen into any other hands than ours, they would have searched farther into it before now. I asked him what he meant by that? and added, I thought they had searched it thoroughly enough; for that I believed no other nation in the world could ever have spread such vast dominions, and planted a country of such a prodigious extent, they having not only kept possession of it, but maintained the government also, and even inhabited it with only a few people.

Perhaps, seignior, says he, you think, notwithstanding that opinion of yours, that we have many more people of our nation in New Spain than we have. I do not know, said I, how many you may have; but, if I should believe you have as many here as in Old Spain, it would be but a few in comparison of the infinite extent of the King of Spain's dominions in America. And then, replied he, I assure you, seignior, there is not one Spaniard to a thousand acres of land, take one place with another, throughout New Spain.

Very well, said I, then I think the riches and wealth of America is very well searched, in comparison to the number of people you have to search after it. No, says he, it is not, neither; for the greatest number of our people live in that part where the wealth is not the greatest, and where even the governor and viceroy, enjoying a plentiful and luxurious life, they take no thought for the increase either of the king's revenues, or the national wealth. This he spoke of the city of Mexico, whose greatness, and the number of its inhabitants, he said, was a disease to the rest of the body. And what, think you, seignior, said he, that in that one city, where there is neither silver nor gold but what is brought from the mountains of St. Clara, the mines at St. Augustine's and Our Lady, some of which are a hundred leagues from it, and yet there are more Spaniards in Mexico than in both those two prodigious empires of Chili and Peru?

I seemed not to believe him; and, indeed, I did not believe him at first, till he returned to me with a question. Pray, seignior capitain, says he, how many Spaniards do you

think there may be in this vast country of Chili? I told him I could make no guess of the numbers; but, without doubt, there were many thousands, intimating that I might suppose, near a hundred thousand. At which he laughed heartily, and assured me, that there were not above two thousand five hundred in the whole kingdom, besides women and children, and some few soldiers, which they looked upon as nothing to inhabitants, because they were not settled anywhere.

I was indeed surprised, and began to name several large places, which, I thought, had singly more Spaniards in them than what he talked of. He presently ran over some of them, and, naming *Baldivia* first, as the most southward, he asked me how many I thought were there? And I told him about three hundred families. He smiled, and assured me there were not above three or four-and-fifty families in the whole place, and about twenty-five soldiers, although it was a fortification, and a frontier. At *Villa Rica*, or the *Rich Town*, where he lived, he said there might be about sixty families, and a lieutenant, with twenty soldiers. In a word, we passed over the many places between and came to the capital, *St. Jago*, where after I had supposed there were five thousand Spaniards, he protested to me there were not above eight hundred, including the viceroy's court, and including the families at *Valparaiso*, which is the seaport, and excluding only the soldiers, which as he said, being the capital of the whole kingdom, might be about two hundred, and excluding the religious, who he added, laughing, signified nothing to the planting a country, for they neither cultivated the land nor increased the people.

Our doctor, who was our interpreter, smiled at this, but merrily said, that was very true, or ought to be so, intimating, that though the priests do not cultivate the land, yet they might chance to increase the people a little; but that was by the way. As to the number of inhabitants at *St. Jago*, the doctor agreed with him, and said, he believed he had said more than there were, rather than less.

As to the kingdom or empire of *Peru*, in which there are many considerable cities and places of note, such as *Lima*, *Quito*, *Cusco*, *la Plata*, and others, there are besides a great number of towns on the seacoasts, such as *Porto Arica*, *St. Miguel*, *Prayta*, *Guyaquil*, *Truxillo*, and many others.

He answered, that it was true that the city of Lima, with the town of Callao, was much increased within a few years, and particularly of late, by the settling of between three and four hundred French there, who came by the King of Spain's license; but that, before the coming of those gentlemen, at which he shook his head, the country was richer, though the inhabitants were not so many; and that, take it as it was now, there could not be reckoned above fifteen hundred families of Spaniards, excluding the soldiers and the clergy, which, as above, he reckoned nothing as to the planting of the country.

We came then to discourse of the silver mines at Potosi, and here he supposed, as I did also, a very great number of people. But seignior, says he, what people is it you are speaking of? There are many thousands of servants, but few masters; there is a garrison of four hundred soldiers always kept in arms and in good order, to secure the place, and keep the negroes, and criminals who work in the mines, in subjection; but that there were not besides five hundred Spaniards, that is to say, men, in the whole place and its adjacents. So that, in short, he would not allow above seven thousand Spaniards in the whole empire of Peru, and two thousand five hundred in Chili; at the same time, allowing twice as many as both these in the city of Mexico only.

After this discourse was over, I asked him what he inferred from it, as to the wealth of the country not being discovered? He answered, It was evident that it was for want of people that the wealth of the country lay hid; that there was infinitely more lay uninquied after than had yet been known; that there were several mountains in Peru equally rich in silver with that of Potosi; and, as for Chili, says he, and the country where we live, there is more gold at this time in the mountains of the Andes, and more easy to come at, than in all the world besides. Nay, says he, with some passion, there is more gold every year washed down out of the Andes of Chili into the sea, and lost there, than all the riches that go from New Spain to Europe in twenty years amount to.

This discourse fired my imagination you may be sure, and I renewed it upon all occasions, taking more or less time every day to talk with this Spaniard upon the subject of cultivation of the lands, improvement of the country, and

the like; always making such inquiries into the state of the mountains of the Andes as best suited my purpose, but yet so as not to give him the least intimation of my design.

One day, conversing with him again about the great riches of the country, and of the mountains and rivers, as above, I asked him, that, seeing the place was so rich, why were they not all princes, or as rich as princes, who dwelt there? He shook his head, and said, it was a great reproach upon them many ways; and, when I pressed him to explain himself, he answered, it was occasioned by two things, namely, pride and sloth. Seignior, says he, we have so much pride that we have no avarice, and we do not covet enough to make us work for it. We walk about sometimes, says he, on the banks of the streams that come down from the mountains, and, if we see a bit of gold lie on the shore, it may be we will vouchsafe to lay off our cloak, and step forward to take it up; but, if we were sure to carry home as much as we could stand under, we would not strip and go to work in the water to wash it out of the sand, or take the pains to get it together; nor perhaps dishonour ourselves so much as to be seen carrying a load, no, not for all the value of the gold itself.

I laughed then, indeed, and told him he was disposed to jest with his countrymen, or to speak ironically; meaning, that they did not take so much pains as was required, to make them effectually rich, but that I supposed he would not have me understand him as he spoke. He said I might understand as favourably as I pleased, but I should find the fact to be true if I would go up with him to Villa Rica, when I came to Baldivia; and, with that, he made his compliment to me, and invited me to his house.

I asked him with a *con licentia*, seignior, that is, with pardon for so much freedom, that, if he lived in so rich a country, and where there was so inexhaustible a treasure of gold, how came he to fall into this state of captivity? and what made him venture himself upon the sea, to fall into the hands of pirates?

He answered, that it was on the very foot of what he had been complaining of; and that, having seen so much of the wealth of the country he lived in, and having reproached himself with that very indolence which he now blamed all his countrymen for, he had resolved in conjunction with two

of his neighbours, the Spaniards, and men of good substance, to set to work in a place in the mountains where they had found some gold, and had seen much washed down by the water, and to find what might be done in a thorough search after the fund or mine of it, which they were sure was not far off; and that he was going to Lima, and from thence, if he could not be supplied, to Panama, to buy negroes for the work, that they might carry it on with the better success.

This was a feeling discourse to me, and made such an impression on me, that I secretly resolved that when I came to Baldivia, I would go up with this sincere Spaniard, for so I thought him to be, and so I found him, and would be an eye-witness to the discovery which I thought was made to my hand, and which I found now I could make more effectual than by all the attempts I was like to make by second-hand.

From this time I treated the Spaniard with more than ordinary courtesy, and told him, if I was not captain of a great ship, and had a cargo upon me of other gentleman's estates, he had said so much of those things, that I should be tempted to give him a visit as he desired, and see those wonderful mountains of the Andes.

He told me that if I would do him so much honour, I should not be obliged to any long stay; that he would procure mules for me at Baldivia, and that I should go not to his house only, but to the mountain itself, and see all that I desired, and be back again in fourteen days at the farthest. I shook my head, as if it could not be, but he never left importuning me; and once or twice, as if I had been afraid to venture myself with him, he told me he would send for his two sons, and leave them in the ship, as hostages for my safety.

I was fully satisfied as to that point, but did not let him know my mind yet; but every day we dwelt upon the same subject, and I travelled through the mountains and valleys so dully in every day's discourse with him, that when I afterwards came to the places we had talked of, it was as if I had looked over them in a map before.

I asked him if the Andes were a mere wall of mountains, contiguous and without intervals and spaces, like a fortification, or boundary to a country? or whether they lay promiscuous, and distant from one another? and whether there lay any way over them into the country beyond?

He smiled when I talked of going over them. He told me they were so infinitely high, that no human creature could live upon the top; and withal so steep and so frightful, that if there was even a pair of stairs up on one side, and down on the other, no man would dare to mount up, or venture down.

But that as for the notion of the hills being contiguous, like a wall that had no gates, that was all fabulous; that there were several fair entrances in among the mountains, and large pleasant and fruitful valleys among the hills, with pleasant rivers, and numbers of inhabitants, and cattle and provisions of all sorts; and that some of the most delightful places to live in that were in the whole world were among the valleys, in the very centre of the highest and most dreadful mountains.

Well, said I, seignior, but how do they go out of one valley into another? and whither do they go at last? He answered me, those valleys are always full of pleasant rivers and brooks, which fall from the hills, and are formed generally into one principal stream to every vale: and that as these must have their outlets on one side of the hills or on the other, so, following the course of those streams, one is always sure to find the way out of one valley into another, and at last out of the whole into the open country; so that it was very frequent to pass from one side to the other of the whole body of the mountains, and not go much higher up hill or down hill, compared to the hills in other places. It was true, he said, there was no abrupt visible parting in the mountains, that should seem like a way cut through from the bottom to the top, which would be indeed frightful; but that as they pass from some of the valleys to others, there are ascents and descents, windings and turnings, sloping up and sloping down, where we may stand on those little ridges, and see the waters on one side run to the west, and on the other side to the east.

I asked him what kind of a country was on the other side? and how long time it would take up to go through from one side to the other? He told me there were ways indeed that were more mountainous and uneasy, in which men kept upon the sides or declivity of the hills; in which the natives would go, and guide others to go, and so might pass the whole ridge of the Andes in eight or nine days, but that

those ways were esteemed very dismal, lonely, and dangerous, because of wild beasts; but that through the valleys the way was easy and pleasant, and perfectly safe, only farther about; and that those ways a man might be sixteen or seventeen days going through.

I laid up all this in my heart, to make use of as I should have occasion, but I acknowledged that it was surprising to me, as it was so perfectly agreeing with the notion that I always entertained of those mountains, of the riches of them, the facility of access to and from them, and the easy passage from one side to another.

The next discourse I had with him upon this subject I began thus: Well, seignior, said I, we are now come quite through the valleys and passages of the Andes, and, methinks I see a vast open country before me on the other side; pray tell me, have you ever been so far as to look into that part of the world, and what kind of a country it is?

He answered gravely, that he had been far enough several times to look at a distance into the vast country I spoke of; And such, indeed, it is, said he; and, as we come upon the rising part of the hills we see a great way, and a country without end; but, as to any descriptions of it, I can say but little, added he, only this, that it is a very fruitful country on that side next the hills; what it is farther, I know not.

I asked him if there were any considerable rivers in it, and which way they generally run? He said it could not be but that from such a ridge of mountains as the Andes there must be a great many rivers on that side, as there were apparently on this; and that, as the country was infinitely larger, and their course, in proportion, longer, it would necessarily follow that those small rivers would run one into another, and so form great navigable rivers, as was the case in the Rio de la Plata, which originally sprung from the same hills, about the city La Plata, in Peru, and swallowing up all the streams of less note, became, by the mere length of its course, one of the greatest rivers in the world. That, as he observed, most of those rivers ran rather south-eastward than northward, he believed they ran away to the sea, a great way farther to the south than the Rio de la Plata; but, as to what part of the coast they might come to the sea in, that he knew nothing of it.

This account was so rational that nothing could be more,

and was, indeed, extremely satisfactory. It was also very remarkable that this agreed exactly with the accounts before given me by the two Chilian Indians, or natives, which I had on board, and with whom I still continued to discourse, as occasion presented; but whom, at this time, I removed into the Madagascar ship, to make room for these Spanish prisoners.

I observed the Spaniard was made very sensible, by my doctor, of the obligation both he and his fellow-prisoners were under to me, in my persuading the privateers to set them at liberty, and in undertaking to carry them home to that part of Spain from whence they came; for, as they had lost their cargo, their voyage seemed to be at an end. The sense of the favour, I say, which I had done him, and was still doing him, in the civil treatment which I gave him, made this gentleman, for such he was in himself and in his disposition, whatever he was by family, for that I knew nothing of, I say, it made him exceedingly importunate with me, and with my doctor, who spoke Spanish perfectly well, to go with him to Villa Rica.

I made him no promise, but talked at a distance. I told him, if he had lived by the sea, and I could have sailed to his door in my ship, I would have made him a visit. He returned, that he wished he could make the river of Baldivia navigable for me, that I might bring my ship up to his door; and, he would venture to say, that neither I, nor any of my ship's company, should starve while we were with him. In the interval of these discourses, I asked my doctor his opinion, whether he thought I might trust this Spaniard, if I had a mind to go up and see the country for a few days?

Seignior, says he, the Spaniards are, in some respects, the worst nation under the sun; they are cruel, inexorable, uncharitable, voracious, and, in several cases, treacherous; but, in two things, they are to be depended upon beyond all the nations in the world; that is to say, when they give their honour, to perform anything, and when they have a return to make for any favour received. And here he entertained me with a long story of a merchant of Carthagena, who, in a sloop, was shipwrecked at sea, and was taken up by an English merchant on board a ship bound to London from Barbadoes, or some other of our islands; that the English merchant, meeting another English ship bound to Jamaica,

put the Spanish merchant on board him, paid him for his passage, and desired him to set him on shore on the Spanish coast, as near to Carthagena as he could. This Spanish merchant could never rest till he found means to ship himself from Carthagena to the Havannah, in the galleons; from thence to Cadiz in Old Spain; and from thence to London, to find out the English merchant, and make him a present to the value of a thousand pistoles for saving his life, and for his civility in returning him to Jamaica, &c. Whether the story was true or not, his inference from it was just, namely, that a Spaniard never forgot a kindness. But take it withal, says the doctor, that I believe it is as much the effect of their pride as of their virtue; for at the same time, said he, they never forget an ill turn any more than they do a good one; and they frequently entail their enmities on their families, and prosecute the revenge from one generation to another, so that the heir has, with the estate of his ancestors, all the family broils upon his hands as he comes to his estate.

From all this he inferred that, as this Spaniard found himself so very much obliged to me, I might depend upon it that he had so much pride in him, that if he could pull down the Andes for me to go through, and I wanted it, he would do it for me; and that nothing would be a greater satisfaction to him, than to find some way or other how to requite me.

All these discourses shortened our voyage, and we arrived fair and softly (for it was very good weather, and little wind) at Tucapel, or the river Imperial, within ten leagues of Baldivia, that is to say, of Cape Bonifacio, which is the north point of the entrance into the river of Baldivia. And here I took one of the most unaccountable, and I must needs acknowledge, unjustifiable resolutions, that ever any commander, intrusted with a ship of such force, and a cargo of such consequence, adventured upon before, and which I by no means recommend to any commander of any ship to imitate; and this was, to venture up into the country above a hundred and fifty miles from my ship, leaving the success of the whole voyage, the estates of my employers, and the richest ship and cargo that ever came out of those seas, to the care and fidelity of two or three men. Such was the unsatisfied thirst of new discoveries which I brought out of England with me, and which I nourished, at all hazards, to the end of the voyage.

However, though I condemn myself in the main for the rashness of the undertaking, yet let me do myself so much justice as to leave it on record too, that I did not run this risk without all needful precautions for the safety of the ship and cargo.

And first, I found out a safe place for the ships to ride, and this neither in the river of Tucapel, nor in the river of Baldivia, but in an opening or inlet of water, without a name, about a league to the south of Tucapel, embayed and secured from almost all the winds that could blow. Here the ships lay easy, with water enough, having about eleven fathoms good holding ground, and about half a league from shore.

I left the supercargo and my mate, also a kinsman of my own, a true sailor, who had been a midshipman, but was now a lieutenant; I say, to those I left the command of both my ships, but with express orders not to stir nor unmoor, upon any account whatever, unavoidable accidents excepted, until my return, or until, if I should die, they should hear of that event; no, though they were to stay there six months, for they had provisions enough, and an excellent place for watering lay just by them. And I made all the men swear to me that they would make no mutiny or disorder, but obey my said kinsman in one ship, and the supercargo in the other, in all things, except removing from that place; and that, if they should command them to stir from thence, they would not so much as touch a sail or a rope for the purpose.

When I made all these conditions, and told my men that the design I went upon was for the good of their voyage, for the service of the owners, and should, if it succeeded, be for all their advantages, I asked them if they were all willing I should go? To which they all answered, that they were very willing, and would take the same care of the ships, and of all things belonging to them, as if I were on board. This encouraged me greatly, and I now resolved nothing should hinder me.

Having thus concluded everything, then, and not till then, I told my Spaniard that I had almost resolved to go along with him, at which he appeared exceedingly pleased, and, indeed, in a surprise of joy. I should have said, that, before I told him this, I had set all the rest of the prisoners on shore, at their own request, just between the port of Tucapel

and the bay of the Conception, excepting two men, who, as he told me, lived in the open country beyond Baldivia, and, as he observed, were very glad to be set on shore with him, so to travel home, having lost what little they had in the ship, and to whom he communicated nothing of the discourse we had so frequently held, concerning the affair of the mountains.

I also dismissed now the two Chilian Indians, but not without a very good reward, not proportioned to their trouble and time only, but proportioned to what I seemed to expect of them, and filled them still with expectations that I would come again, and take a journey with them into the mountains.

And now it became necessary that I should use the utmost freedom with my new friend, the Spaniard, being, as I told him, to put my life in his hands, and the prosperity of my whole adventure, both ship and ship's company.

He told me he was sensible that I did put my life into his hands, and that it was a very great token of my confidence in him, even such a one that he, being a stranger to me, had no reason to expect; but he desired me to consider that he was a Christian, not a savage; that he was one I had laid the highest obligation upon, in voluntarily taking him out of the hands of the freebooters, where he might have lost his life. And, in the next place, he said, it was some recommendation that he was a gentleman, and that I should find him to be a man of honour; and, lastly, that it did not appear that he could make any advantage of me, or that he could get anything by using me ill; and, if even that was no argument, yet I should find, when I came to his house, that he was not in a condition to want anything that might be gained, so much as to procure it by such a piece of villany and treachery as to betray and destroy the man who had saved his life, and brought him out of the hands of the devil safe to his country and family, when he might have been carried away God knows whither. But to conclude all, he desired me to accept the offer he had made me at sea, viz., that he would send for his two sons, and leave them on board the ship as hostages for my safety, and desired they might be used on board no otherwise than I was used with him in the country.

I was ashamed to accept such an offer as this, but he

pressed it earnestly, and importuned the doctor to move me to accept it, telling him that he should not be easy if I did not; so that, in short, the doctor advised me to agree to it, and, accordingly, he hired a messenger and a mule, and sent away for his two sons to come to him; and such expedition the messenger made, that in six days he returned with the two sons and three servants, all on horseback. His two sons were very pretty, well-behaved youths, who appeared to be gentlemen in their very countenances; the eldest was about thirteen years old, and the other about eleven. I treated them on board, as I had done their father, with all possible respect; and, having entertained them two days, left orders that they should be treated in the same manner when I was gone; and to this I added aloud, that their father might hear it, that whenever they had a mind to go away, they should let them go. But their father laid a great many solemn charges upon them that they should not stir out of the ship till I came back safe, and that I gave them leave, and he made them promise they would not; and the young gentlemen kept their word so punctually, that, when our supercargo, whom I left in command, offered to let them go on shore several times, to divert them with shooting and hunting, they would not stir out of the ship, and did not till I came back again.

Having gone this length, and made everything ready for my adventure, we set out, viz., Captain Merlotte, the Spanish doctor, the old mutineer who had been my second mate, but who was now captain of the Madagascar ship, and myself, with two midshipmen, whom he took as servants, but whom I resolved to make the directors of the main enterprisc. As to the number, I found my Spaniard made no scruple of that, if it had been half my ship's company.

We set out, some on horses and some on mules, as we could get them, but the Spaniard and myself rode on two very good horses, being the same that his two sons came on. We arrived at a noble country-seat, about a league short of the town, where, at first, I thought we had been only to put in for refreshment, but I soon found that it was really his dwelling-house, and where his family and servants resided.

Here we were received like princes, and with as much ceremony as if he had been a prince that entertained us. The major-domo, or steward of his house, received us, took

in our baggage, and ordered our servants to be taken care of.

It is sufficient to say, that the Spaniard did all that pride and ostentation was capable of inspiring him with, to entertain us; and the truth is, he could not have lived in a country in the world more capable of gratifying his pride; for here, without anything uncommon, he was able to show more gold plate than many good families in our country have of silver; and as for silver, it quite eclipsed the appearance, or rather took away the very use of pewter, of which we did not see one vessel, no not in the meanest part of his house. It is true, I believe, the Spaniard had not a piece of plate, or of any household furniture, which we did not see, except what belonged to the apartment of his wife; and, it is to be observed, that the women never appeared, except at a distance, and in the gardens, and then, being under veils, we could not know the lady from her women, or the maids from the mistress.

We were lodged every one in separate apartments, very well furnished, but two of them very nobly indeed, though all the materials for furniture there must be at an excessive price. The way of lodging upon quilts, and in beds made pavilion-wise, after the Spanish custom, I need not describe; but it surprised me to see the rooms hung with very rich tapestries, in a part of the world where they must cost so dear.

We had Chilian wine served us up in round gold cups, and water in large silver decanters, that held, at least, five quarts apiece; these stood in our chamber. Our chocolate was brought up in the same manner, in deep cups, all of gold, and it was made in vessels all of silver.

It would be tiresome to the reader to particularise my account with the relation of all the fine things our host had in his house, and I could not be persuaded but that he had borrowed all the plate in the town to furnish out his sideboard and table. But my doctor told me it was nothing but what was very usual among them that were men of any substance, as it was apparent he was; and that the silversmiths at St. Jago supplied them generally with their plate ready wrought, in exchange (with allowance for the quality) for the gold which they found in the mountains, or in the brooks and streams which came from the mountains, into which the

hasty showers of winter rain frequently washed down pretty large lumps, and others, which were smaller, they washed out of the sands by the ordinary methods of washing of ore.

I was better satisfied in this particular when, the next day, talking to our new landlord about the mountains, and the wealth of them, I asked him if he could show me any of the gold which was usually washed out of the hills by the rain, in the natural figure in which it was found? He smiled, and told me he could show me a little, and immediately conducted us into a kind of a closet, where he had a great variety of odd things gathered up about the mountains and rivers, such as fine shells, stones in the form of stars, heavy pieces of ore, and the like, and, after this, he pulled out a great leather bag, which had, I believe, near fifty pounds weight in it. Here, seignior, says he, here is some of the dirt of the earth; and turning it out upon the table, it was easy to see that it was all mixed with gold, though the pieces were of different forms, and some scarce looking like gold at all, being so mixed with the spar or with earth, that it did not appear so plain; but, in every bit there was something of the clear gold to be seen, and, the smaller the lumps, the purer the gold appeared.

I was surprised at the quantity, more than at the quality of the metal, having, as I have said, seen the gold which the Indians found in the countries I have described, which seemed to have little or no mixture. But then I was to have considered, that what those Indians gathered was farther from the hills which it came from, and that those rough, irregular pieces would not drive so far in the water, but would lodge themselves in the earth and sand of the rivers nearer home; and also, that the Indians, not knowing how to separate the gold by fire from the dross and mixture above, did not think those rough pieces worth their taking up, whereas, the Spaniards here understood much better what they were about.

But, to return to the closet. When he had shown us this leather pouch of gold, he swept the ore to one side of the table, which had ledges round it to keep it from running off, and took up another bag full of large pieces of stone, great lumps of earth, and pieces of various shapes, all of which had some gold in them, but not to be gotten out but by fire. These, he told us, their servants bring home as they find them in the mountains, lying loose here and there, when they go after their cattle.

But still, I asked him if they found no pieces of pure gold; upon this he turned to a great old cabinet, full of pretty large drawers, and, pulling out one drawer, he showed us a surprising number of pieces of pure clean gold, some round, some long, some flat, some thick, all of irregular shapes, and worked roundish at the ends with rolling along on the sands; some of these weighed a quarter of an ounce, some more, and some less; and, as I lifted the drawer, I thought there could be no less than between twenty and thirty pounds weight of it.

Then he pulled out another drawer, which was almost full of the same kind of metal, but as small as sand, the biggest not so big as pins heads, and which might very properly be called gold dust.

After this sight, we were not to be surprised at anything he could show us of the kind. I asked him how long such a treasure might be amassing together in that country? He told me that was according to the pains they might take in the search; that he had been twelve years here, and had done little or nothing; but, had he had twenty negroes to have set on work, as he might have had, he might have procured more than this in one year. I asked him how much gold in weight he thought there might be in all he had shown me? He told me, he could not tell; that they never troubled themselves to weigh, but when the silversmith at St. Jago came to bring home any vessel, or when the merchants from Lima came to Baldivia with European goods, then they bought what they wanted of them. That they were sensible they gave excessive prices for everything, even ten or twenty for one; but as gold, he said, was the growth of that country, and the other things, such as cloth, linen, fine silks, &c., were the gold of Europe, they did not think much to give what was asked for those things. In short, I found that the people in this country, though they kept large plantations in their hands, had great numbers of cattle, ingenios, as they call them, for making sugar, and land, under management, for the maintenance of themselves and families, yet did not wholly neglect the getting gold out of the mountains, where it was in such plenty; and, therefore, it seems the town adjacent is called Villa Rica, or the Rich Town, being seated, as it were, at the foot of the mountains, and in the richest part of them.

After I had sufficiently admired the vast quantity of gold he had, he made signs to the doctour that I should take any piece or any quantity that I pleased; but thought I might take it as an affront to have him offer me any particular small parcel. The doctour hinted to me, and I bade him return him thanks; but to let him know that I would by no means have any of that, but that I would be glad to take up a piece or two, such as chance should present to me, in the mountains, that I might show in my own country, and tell them that I took it up with my own hands. He answered, he would go with me himself; and doubted not but to carry me where I should fully satisfy my curiosity, if I would be content to climb a little among the rocks.

I now began to see plainly that I had no manner of need to have taken his sons for hostages for my safety, and would fain have sent for them back again, but he would by no means give me leave; so I was obliged to give that over. A day or two after, I desired he would give me leave to send for one person more from the ships, who I had a great mind should see the country with me, and to send for some few things that I should want, and, withal, to satisfy my men that I was safe and well.

This he consented to; so I sent away one of the two midshipmen, whom I called my servants, and with him two servants of the Spaniard, my landlord, as I styled him, with four mules and two horses. I gave my midshipman my orders and directions, under my hand, to my supereargo, what to do, for I was resolved to be even with my Spaniard for all his good usage of me. The midshipman and his two companions did not return in less than ten days, for they came back pretty well laden, and were obliged to come all the way on foot.

The whole of this time my landlord and I spent in surveying the country, and viewing his plantation. As for the city of Villa Riea, it was not the most proper to go there in public, and the doctour knew that as well as the Spaniard, and, therefore, though we went several times *incognito*, yet it was of no consequence to me, neither did I desire it.

One night I had a very strange fright here, and behaved myself very much like a simpleton about it. The ease was this. I waked in the middle of the night, and, chancing to open my eyes, I saw a great light of fire, which, to me,

seemed as if the house, or some part of it, had been on fire, I, as if I had been at Wapping or Rotherhithe, where people are always terrified with such things, jumped out of bed, and called my friend, Captain Merlotte, and cried out, Fire! fire! The first thing I should have thought of on this occasion should have been, that the Spaniards did not understand what the words fire! fire! meant; and that, if I expected they should understand me, I should have cried Fuego, Fuego!

However, Captain Merlotte got up, and my Madagascar captain, for we all lay near one another, and, with the noise, they waked the whole house; and my landlord, as he afterwards confessed, began to suspect some mischief, his steward having come to his chamber door, and told him that the strangers were up in arms; in which mistake we might have all had our throats cut, and the poor Spaniard not to blame neither.

But our doctor coming hastily in to me, unriddled the whole matter, which was this: that a volcano, or burning vent among the hills, being pretty near the Spanish side of the country, as there are many of them in the Andes, had flamed out that night, and gave such a terrible light in the air as made us think the fire had at least been in the outhouses, or in part of the house, and, accordingly, had put me in such a fright.

Upon this, having told me what it was, he ran away to the Spanish servants, and told them what the meaning of it all was, and bade them go and satisfy their master, which they did, and all was well again; but, as for myself, I sat up almost all the night staring out from the window at the eruption of fire upon the hills, for the like wonderful appearance I had never seen before.

I sincerely begged my landlord's pardon for disturbing his house, and asked him if those eruptions were frequent? He said no, they were not frequent, for they were constant, either in one part of the hills or another; and that in my passing the mountains I should see several of them. I asked him if they were not alarmed with them? and if they were not attended with earthquakes? He said, he believed that among the hills themselves they might have some shakings of the earth, because sometimes were found pieces of the rocks that had been broken off and fallen down; and that it

was among those that sometimes parts of stone were found which had gold interspersed in them, as if they had been melted and run together, of which he had shown me some ; but that, as for earthquakes in the country, he had never heard of any since he came thither, which had been upwards of fifteen years, including three years that he dwelt at St. Jago.

One day, being out on horseback with my landlord, we rode up close to the mountains, and he showed me at a distance, an entrance as he called it, into them, frightful enough, indeed, as shall be described in its place. He then told me, that was the way he intended to carry me when he should go to show me the highest hills in the world ; but he turned short, and, smiling, said it should not be yet ; for, though he had promised me a safe return, and left hostages for it, yet he had not capitulated for time.

I told him he need not capitulate with me for time ; for if I had not two ships to stay my coming, and between three and four hundred men eating me up all the while, I did not know whether I should ever go away again or not, if he would give me house room. He told me as to that, he had sent my men some provisions, so that they would not starve if I did not go back for some days. This surprised me not a little, and I discovered it in my countenance. Nay, seignior, says he, I have only sent them some victuals to maintain my two hostages, for you know they must not want. It was not good manners in me to ask what he had sent ; but I understood, as soon as my midshipman returned, that he had sent down sixteen cows or runts, I know not what else to call them, but they were black cattle, thirty hogs, thirteen large Peruvian sheep, as big as great calves, and three casks of Chilian wine, with an assurance that they should have more provisions when that was spent.

I was amazed at all this munificence of the Spaniard, and very glad I was that I had sent my midshipman for the things I intended to present him with, for I was as well able to requite him for a large present as he was to make it, and had resolved it before I knew he had sent anything to the ships ; so that this exchanging of presents was but a kind of generous barter or commerce ; for as to gold, we had either of us so much, that it was not at all equal in value to what we had to give on both sides, as we were at present situated.

In short, my midshipman returned with the horses and servants, and when he had brought what I had sent for into a place which I desired the Spaniard to allow me to open my things in, I sent my doctor to desire the Spaniard to let me speak with him.

I told him first, that he must give me his parole of honour not to take amiss what I had to say to him; that it was the custom in our country, at any time, to make presents to the ladies, with the knowledge and consent of their husbands or parents, without any evil design, or without giving any offence, but that I knew it was not so among the Spaniards. That I had not had the honour yet either to see his lady or his daughter, but that I had heard he had both; however, that if he pleased to be the messenger of a trifle I had caused my man to bring, and would present it for me, and not take it as an offence, he should see beforehand what it was, and I would content myself with his accepting it in their behalf.

He told me, smiling, he did not bring me thither to take any presents of me. I had already done enough, in that I had given him his liberty, which was the most valuable gift in the world: and, as to his wife, I had already made her the best present I was able, having given her back her husband. That it is true, it was not the custom of the Spaniards to let their wives appear in any public entertainment of friends, but that he had resolved to break through that custom; and that he had told his wife what a friend I had been to her family, and that she should thank me for it in person; and that then, what present I had designed for her, since I would be a maker of presents, she should do herself the honour to take it with her own hands, and he would be very far from mistaking them, or taking it ill from his wife.

As this was the highest compliment he was able to make me, the more he was obliging in the manner, for he returned in about two hours, leading his wife into the room by the hand, and his daughter following.

I must confess I was surprised, for I did not expect to have seen such a sight in America. The lady's dress, indeed, I cannot easily describe; but she was really a charming woman, of about forty years of age, and covered over with emeralds and diamonds; I mean as to her head. She was veiled till she came into the room, but gave her veil to her woman when her husband took her by the hand. Her

daughter I took to be about twelve years old, which the Spaniards count marriageable; she was pretty, but not so handsome as her mother.

After the compliments on both sides, my landlord, as I now call him, told her very handsomely what a benefactor I had been to her family, by redeeming him from the hands of villains; and she, turning to me, thanked me in the most obliging manner, and with a modest graceful way of speech, such as I cannot describe, and which indeed I did not think the Spaniards, who are said to be so haughty, had been acquainted with.

I then desired the doctor to tell the Spaniard, her husband, that I requested his lady to accept a small present which my midshipman had brought for her from the ship, and which I took in my hand, and the Spaniard led his wife forward to take it; and I must needs say it was not a mean present, besides its being of ten times the value in that place as it would have been at London; and I was now very glad that, as I mentioned above, I always reserved a small quantity of all goods unsold, that I might have them to dispose of as occasion should offer.

First, I presented her with a very fine piece of Dutch Holland, worth in London about seven shillings an ell, and thirty-six ells in length, and worth in Chili, to be sure, fifteen pieces of eight per ell, at least; or it was rather likely that all the kingdom of Chili had not such another.

Then I gave her two pieces of China damask, and two pieces of China silks, called atlases, flowered with gold; two pieces of fine muslin, one flowered the other plain, and a piece of very fine chintz, or printed calico; also a large parcel of spices, made up in elegant papers, being about six pounds of nutmegs, and about twice as many cloves.

And lastly, to the young lady I gave one piece of damask, two pieces of China taffity, and a piece of fine striped muslin.

After all this was delivered, and the ladies had received them, and given them their women to hold, I pulled out a little box in which I had two couple of large pearls, of that pearl which I mentioned we found at the Pearl Islands, very well matched for ear-rings, and gave the lady one pair, and the daughter the other; and now, I think, I had made a present fit for an ambassador to carry to a prince.

The ladies made all possible acknowledgment, and we

had the honour that day to dine with them in public. My landlord, the Spaniard, told me I had given them such a present as the viceroy of Mexico's lady would have gone fifty leagues to have received.

But I had not done with my host; for after dinner, I took him into the same room, and told him I hoped he did not think I had made all my presents to the ladies, and had nothing left to show my respect to him; and therefore, first, I presented him with three negro men, which I had bought at Callao for my own use, but knew I could supply myself again, at or in my way home, at a moderate price; in the next place, I gave him three pieces of black Colchester baize, which, though they are coarse ordinary things in England, that a footman would scarce wear, are a habit for a prince in that country. I then gave him a piece of very fine English serge, which was really very valuable in England, but much more there, and another piece of crimson broadcloth, and six pieces of fine silk druggets for his two sons; and thus I finished my presents. The Spaniard stood still and looked on all the while I was laying out my presents to him, as one in a transport, and said not one word till all was over; but then he told me very gravely, that it was now time for him to turn me out of his house: For seignior, says he, no man ought to suffer himself to be obliged beyond his power of return, and I have no possible way of making any return to you equal to such things as these.

It is true the present I had made him, if it was to be rated by the value of things in the country where it then was, would have been valued at six or seven hundred pounds sterling; but, to reckon them as they cost me, did not altogether amount to above one hundred pounds, except the three negroes, which, indeed, cost me at Lima one thousand two hundred pieces of eight.

He was as sensible of the price of those negroes as I was of the occasion he had of them, and of the work he had to do for them; and he came to me about an hour after, and told me he had looked over all the particulars of the noble presents which I had made them; and though the value was too great for him to accept, or for any man to offer him, yet since I had been at so much trouble to send for the things, and that I thought him worthy such a bounty, he was come back to tell me that he accepted thankfully all my presents,

both to himself and to his wife and daughter, except only the three negroes ; and as they were bought in the country, and were the particular traffick of the place, he could not take them as a present, but would be equally obliged, and take it for as much a favour if I would allow him to pay for them.

I smiled, and told him he and I would agree upon that ; for he did not yet know what favours I had to ask of him, and what expense I should put him to ; that I had a great design in my view, which I was to crave his assistance in, and which I had not yet communicated to him, in which he might perhaps find that he would pay dear enough for all the little presents I had made him ; and, in the meantime, to make himself easy as to the three negro men, I gave him my word that he should pay for them, only not yet.

He could have nothing to object against an offer of this kind, because he could not guess what I meant, but gave me all the assurance of service and assistance that lay in his power in anything that I might have to do in that country.

But here, by the way, it ought to be understood, that all this was carried on with a supposition that we acted under a commission from the King of France ; and though he knew many of us were English, and that I was an Englishman in particular, yet as we had such a commission, and produced it, we were Frenchmen in that sense to him, nor did he entertain us under any other idea.

The sequel of this story will also make it sufficiently appear that I did not make such presents as these in mere ostentation, or only upon the compliment of a visit to a Spanish gentleman, any more than I would leave my ship and a cargo of such value, in the manner I had done, to make a tour into the country, if I had not had views sufficient to justify such measures ; and the consequence of those measures will be the best apology for my conduct, with all who will impartially consider them.

We had now spent a fortnight, and something more, in ceremony and civilities, and in now and then taking a little tour about the fields and towards the mountains. However, even in this way of living I was not so idle as I seemed to be, for I not only made due observations of all the country which I saw, but informed myself sufficiently of the parts which I did not see. I found the country not only fruitful in

the soil, but wonderfully temperate and agreeable in its climate. The air, though hot, according to its proper latitude, yet that heat so moderated by the cool breezes from the mountains, that it was rather equal to the plain countries in other parts of the world in the latitude of 50° than to a climate in 38 to 40° .

This gave the inhabitants the advantages, not only of pleasant and agreeable living, but also of a particular fertility which hot climates are not blessed with, especially as to corn, the most necessary of all productions, such as wheat, I mean European wheat, or English wheat, which grew here as well and as kindly as in England, which in Peru and in the Isthmus of America will by no means thrive for want of moisture and cold.

Here were also an excellent middling breed of black cattle, which the natives fed under the shade of the mountains and on the banks of the rivers till they came to be very fat. In a word, here were, or might be produced, all the plants, fruits, and grain, of a temperate climate. At the same time, the orange, lemon, citron, pomegranate, and figs, with a moderate care would come to a very tolerable perfection in their gardens, and even sugar canes in some places, though these last but rarely, and not without great art in the cultivation, and chiefly in gardens.

I was assured, that farther southward, beyond Baldivia, and to the latitude of 47 to 49° , the lands were esteemed richer than where we now were, the grass more strengthening and nourishing for the cattle, and that, consequently, the black cattle, horses, and hogs, were all of a larger breed. But that, as the Spaniards had no settlement beyond Baldivia to the south, so they did not find the natives so tractable as where we then were; where, though the Spaniards were but few, and the strength they had was but small, yet, as upon any occasion they had always been assisted with forces sufficient from St. Jago, and, if need were, even from Peru, so the natives had always been subdued, and had found themselves obliged to submit; and that now they were entirely reduced, and were, and had been for several years, very easy and quiet. Besides, the plentiful harvest which they made of gold from the mountains (which appeared to be the great allurements of the Spaniards), had drawn them rather to settle here than farther southward, being naturally addicted,

as my new landlord confessed to me, to reap the harvest which had the least labour and hazard attending it, and the most profit.

Not but that, at the same time, he confessed that he believed and had heard that there was as much gold to be found farther to the south, as far as the mountains continued; but that, as I have said, the natives were more troublesome there, and more dangerous, and that the king of Spain did not allow troops sufficient to civilize and reduce them.

I asked him concerning the natives in the country where we were? He told me they were the most quiet and inoffensive people, since the Spaniards had reduced them by force, that could be desired; that they were not, indeed, numerous or warlike, the warlike and obstinate part of them having fled farther off to the south, as they were overpowered by the Spaniards; that, for those who were left, they lived secure under the protection of the Spanish governor; that they fed cattle and planted the country, and sold the product of their lands chiefly to the Spaniards; but that they did not covet to be rich, only to obtain clothes, arms, powder and shot, which, however, they were suffered to have but sparingly, and with good assurance of their fidelity. I asked him if they were not treacherous and perfidious, and if it was not dangerous trusting themselves among them in the mountains, and in the retired places where they dwelt? He told me that it was quite the contrary; that they were so honest, and so harmless, that he would at any time venture to send his two sons into the mountains a-hunting, with each of them a Chilian for his guide; and let them stay with the said natives two or three nights and days at a time, and be in no uneasiness about them; and that none of them were ever known to do any foul or treacherous thing by the Spaniards, since he had been in that country.

Having thus finally informed myself of things, I began now to think it was high time to have a sight of the particulars which I came to inquire after, viz., the passages of the mountains, and the wonders that were to be discovered on the other side; and, accordingly, I took my patron, the Spaniard, by himself, and told him that as I was a traveller, and was now in such a remote part of the world, he could not but think I should be glad to see everything extraordinary that was to be seen, that I might be able to give some

account of the world when I came into Europe, better and differing from what others had done who had been there before me; and that I had a great mind, if he would give me his assistance, to enter into the passages and valleys which he had told me so much of in the mountains; and, if it was possible, which, indeed, I had always thought it was not, to take a prospect of the world on the other side.

He told me it was not a light piece of work, and perhaps the discoveries might not answer my trouble, there being little to be seen but steep precipices, inhospitable rocks, and impassable mountains, immuring us on every side, innumerable rills and brooks of water falling from the cliffs, making a barbarous and unpleasant sound, and that sound echoed and reverberated from innumerable cavities among the rocks, and these all pouring down into one middle stream, which we should always find on one side or other of us as we went; and that sometimes we should be obliged to pass those middle streams, as well as the rills and brooks on the sides, without a bridge, and at the trouble of pulling off our clothes.

He told us that we should meet, indeed, with provisions enough, and with an innocent, harmless people, who, according to their ability, would entertain us very willingly; but that I, who was a stranger, would be sorely put to it for lodging, especially for so many of us.

However, he said, as he had perhaps at first raised this curiosity in me, by giving me a favourable account of the place, he would be very far from discouraging me now; and that, if I resolved to go, he would not only endeavour to make everything as pleasant to me as he could, but that he and his major-domo would go along with me, and see us safe through and safe home again; but desired me not to be in too much haste, for that he must make some little preparation for the journey, which, as he told us, might perhaps take us up fourteen or sixteen days forward, and as much back again; not, he said, that it was necessary that we should be so long going and coming, as that he supposed I would take time to see everything which I might think worth seeing, and not be in so much haste as if I was sent express. I told him he was very much in the right; that I did not desire to make a thing which I had expected so much pleasure in, be a toil to me more than needs must; and, above all, that as I supposed I should not return into these parts very soon, I

would not take a cursory view of a place which I expected would be so well worth seeing, and let it be known to all I should speak of it to, that I wanted to see it again before I could give a full account of it.

Well, seignior, says he, we will not be in haste, or view it by halves; for, if wild and uncouth places be a diversion to you, I promise myself your curiosity shall be fully gratified; but as to extraordinary things, rarities in nature, and surprising incidents, which foreigners expect, I cannot say much to those. However, what think you, seignior, says he, if we should take a tour a little way into the entrance of the hills which I showed you the other day, and look upon the gate of this gulf? Perhaps your curiosity may be satisfied with the first day's prospect, which I assure you will be none of the most pleasant, and you may find yourself sick of the enterprise.

I told him, no; I was so resolved upon the attempt, since he, who I was satisfied would not deceive me, had represented it as so feasible, and especially since he had offered to conduct me through it, that I would not, for all the gold that was in the mountains, lay it aside. He shook his head at that expression, and, smiling at the doctor, says he, This gentleman little thinks that there is more gold in these mountains, nay, even in this part where we are, than there is above ground in the whole world. Partly understanding what he said, I answered, my meaning was to let him see that nothing could divert me from the purpose of viewing the place, unless he himself forbade me, which I hoped he would not; and that, as for looking a little way into the passage, to try if the horror of the place would put a check to my curiosity, I would not give him that trouble, seeing, the more terrible and frightful, the more difficult and impracticable it was, provided it could be mastered at last, the more it would please me to attempt and overcome it.

Nay, nay, seignior, said he, pleasantly, there is nothing difficult or impracticable in it, nor is it anything but what the country people, and even some of our nation, perform every day; and that not only by themselves, either for sport in pursuit of game, but even with droves of cattle, which they go with from place to place, as to a market or a fair; and, therefore, if the horror of the cliffs and precipices, the noises of the volcanos, the fire, and such things as you may hear

and see above you, will not put a stop to your curiosity, I assure you, you shall not meet with anything impassable or impracticable below, nor anything but, with the assistance of God and the Blessed Virgin (and then he crossed himself, and so we did all), we shall go cheerfully over.

Finding, therefore, that I was thus resolutely bent upon the enterprise, but not in the least guessing at my design, he gave order to have servants and mules provided, for mules are much fitter to travel among the hills than horses; and, in four days he promised to be ready for a march.

I had nothing to do in all these four days but to walk abroad, and, as we say, look about me; but I took this opportunity to give instructions to my two midshipmen, who were called my servants, in what they were to do.

First, I charged them to make landmarks, bearings, and beacons, as we might call them, upon the rocks above them, and at every turning in the way below them, also at the reaches and windings of the rivers and brooks, falls of water, and everything remarkable, and to keep each of them separate and distinct journals of these things, not only to find the way back again by the same steps, but that they might be able to find that way afterwards by themselves, and without guides, which was the foundation and true intent of all the rest of my undertaking; and, as I knew these were both capable to do it, and had courage and fidelity to undertake it, I had singled them out for the attempt, and had made them fully acquainted with my whole scheme, and, consequently, they knew the meaning and reason of my present discourse with them. They promised not to fail to show me a plan of the hills, with the bearings of every point, one with another, where every step was to be taken, and every turning to the right hand or to the left, and such a journal, I believe, was never seen before or since, but it is too long for this place. I shall, however, take out the heads of it as I proceed, which may serve as a general description of the place.

The evening of the fourth day, as he had appointed, my friend, the Spaniard, let me know, that he was ready to set out, and accordingly we began our cavalcade. My retinue consisted of six, as before, and we had mules provided for us; my two midshipmen, as servants, had two mules given them also for their baggage, the Spaniard had six also, viz., his gentleman, or, as I called him before, his major-domo,

on horseback, that is to say, on muleback, with mules for his baggage, and four servants on foot. Just before we set out, his gentleman brought each of us a fuzee, and our two servants each a harquebuss, or short musket, with cartouches, powder, and ball, together with a pouch and small shot, such as we call swan-shot, for fowls or deer, as we saw occasion.

I was as well pleased with this circumstance as with any my landlord had done, because I had not so entire a confidence in the native Chilians as he had; but I saw plainly, some time after, that I was wrong, for nothing could be more honest, quiet, and free from design, than those people, except the poor honest people where we dressed up the king and queen, as already mentioned.

We were late in the morning before we got out, having all this equipage to furnish, and, travelling very gently, it was about two hours before sunset when we came to the entrance of the mountains, where, to my surprise, I found we were to go in upon a level, without any ascent, at least that was considerable. We had, indeed, gone up upon a sharp ascent, for near two miles, before we came to the place.

The entrance was agreeable enough, the passage being near half a mile broad. On the left hand was a small river, whose channel was deep, but the water shallow, there having been but little rain for some time; the water ran very rapid, and, as my Spaniard told me, was sometimes exceeding fierce. The entrance lay inclining a little south, and was so straight, that we could see near a mile before us; but the prodigious height of the hills on both sides, and before us, appearing one over another, gave such a prospect of horror, that I confess it was frightful at first to look on the stupendous altitude of the rocks; everything above us looking one higher than another was amazing; and to see how in some places they hung over the river, and over the passage, it created a dread of being overwhelmed with them.

The rocks and precipices of the Andes, on our right hand, had here and there vast cliffs and entrances, which looked as if they had been different thoroughfares; but, when we came to look full into them, we could see no passage at the farther end, and that they went off in slopes, and with gulleys made by the water, which, in hasty rains, came pouring down

from the hills, and which, at a distance, made such noises as it is impossible to conceive, unless by having seen and heard the like before; for the water, falling from a height twenty times as high as our own Monument, and, perhaps, much higher, and meeting in the passage with many dashes and interruptions, it is impossible to describe how the sound, crossing and interfering, mingled itself, and the several noises sunk one into another, increasing the whole, as the many waters joining increased the main stream.

We entered this passage about two miles the first night; after the first length, which as I said, held about three quarters of a mile, we turned away to the south, short on the right hand; the river leaving us, seemed to come through a very narrow but deep hollow of the mountains, where there was little more breadth at the bottom than the channel took up, though the rocks inclined backward as they ascended, as placed in several stages, though all horrid and irregular; and we could see nothing but blackness and terror all the way. I was glad our passage did not turn on that side, but wondered that we should leave the river, and the more when I found, that in the way we went, having first mounted gently a green pleasant slope, it declined again, and we saw a new rivulet begin in the middle, and the water running southeast or thereabouts. This discovery made me ask if the water went away into the new world beyond the hills? My patron smiled, and said, No seignior, not yet; we shall meet with the other river again very quickly; and so we found it again the next morning.

When we came a little farther, we found the passage open, and we came to a very pleasant plain, which declined a little gradually, widening to the left, or cast side; on the right side of this we saw another vast opening like the first, which went in about half a mile, and then closed up as the first had done, sloping up to the top of the hills, a most astonishing inconceivable height.

My patron stopping here, and getting down, or alighting from his mule, gave him to his man, and asking me to alight, told me this was the first night's entertainment I was to meet with in the Andes, and hoped I was prepared for it. I told him, that I might very well consent to accept of such entertainment, in a journey of my own contriving, as he was content to take up with, in compliment to me.

I looked round to see if there were any huts or eots of the mountaineers thereabouts, but I perceived none; only I observed something like a house, and it was really a house of some of the said mountaineers, upon the top of a precipice as high from where we stood, as the summit of the eupola of St. Paul's, and I saw some living creatures, whether men or women I could not tell, looking from thence down upon us. However, I understood afterwards that they had ways to come at their dwelling, which were very easy and agreeable, and had lanes and plains where they fed their cattle, and had everything growing that they desired.

My patron, making a kind of an invitation to me to walk, took me up that dark chasm, or opening, on the right hand, which I have just mentioned. Here, sir, said he, if you will venture to walk a few steps, it is likely we may show you some of the product of this country; but, recollecting that night was approaching, he added, I see it is too dark; perhaps it will be better to defer it till the morning. Accordingly, we walked back towards the place where we had left our mules and servants, and, when we came thither, there was a complete camp fixed, three very handsome tents raised, and a bar set up at a distance, where the mules were tied one to another to graze, and the servants and the baggage lay together, with an open tent over them.

My patron led me into the first tent, and told me he was obliged to let me know that I must make a shift with that lodging, the place not affording any better.

Here we had quilts laid very commodiously for me and my three comrades, and we lodged very comfortably; but, before we went to rest, we had the third tent to go to, in which there was a very handsome table, covered with a cold treat of roasted mutton and beef, very well dressed, some potted or baked venison, with pickles, conserves, and fine sweetmeats of various sorts.

Here we ate very freely, but he bade us depend upon it that we should not fare so well the next night, and so it would be worse every night, till we came to lie entirely at a mountaineer's; but he was better to us than he pretended.

In the morning, we had our chocolate as regularly as we used to have it in his own house, and we were soon ready to pursue our journey. We went winding now from the south-east to the left, till our course looked east by north, when we

came again to have the river in view. But I should have observed here, that my two midshipmen, and two of my patron's servants, had, by his direction, been very early in the morning climbing up the rocks in the opening on the right hand, and had come back again about a quarter of an hour after we set out; when, missing my two men, I inquired for them, and my patron said they were coming; for, it seems he saw them at a distance, and so we halted for them.

When they were come almost up to us, he called to his men in Spanish, to ask if they had had *Una bon vejo*? They answered, *Poco, poco*; and when they came quite up, one of my midshipmen showed me three or four small bits of clean perfect gold, which they had picked up in the hill or gullet where the water trickled down from the rocks; and the Spaniard told them that, had they had time, they should have found much more, the water being quite down, and nobody having been there since the last hard rain. One of the Spaniards had three small bits in his hand also. I said nothing for the present, but charged my midshipmen to mark the place, and so we went on.

We followed up the stream of this water for three days more, encamping every night as before, in which time we passed by several such openings into the rocks on either side. On the fourth day we had the prospect of a very pleasant valley and river below us, on the north side, keeping its course almost in the middle; the valley reaching near four miles in length, and in some places near two miles broad.

This sight was perfectly surprising, because here we found the vale fruitful, level, and inhabited, there being several small villages or clusters of houses, such as the Chilians live in, which are low houses, covered with a kind of sedge, and sheltered with little rows of thick grown trees, but of what kind we knew not.

We saw no way through the valley, nor which way we were to go out, but perceived it every where bounded with prodigious mountains, look to which side of it we would. We kept still on the right, which was now the south-east side of the river, and as we followed it up the stream, it was still less than at first, and lessened every step we went, because of the number of rills we left behind us; and here we encamped the fifth time, and all this time the Spanish gentleman victualled us; then we turned again to the right, where

we had a new and beautiful prospect of another valley, as broad as the other, but not above a mile in length.

After we had passed through this valley, my patron rode up to a poor cottage of a Chilian Indian without any ceremony, and calling us all about him, told us that there we would go to dinner. We saw a smoke indeed *in* the house, rather than coming *out* of it; and the little that did, smothered through a hole in the roof instead of a chimney. However, to this house, as an inn, my patron had sent away his major-domo and another servant; and there they were, as busy as two professed cooks, boiling and stewing goats' flesh and fowls, making up soups, broths, and other messes, which it seems they were used to provide, and which, however homely the cottage was, we found very savoury and good.

Immediately a loose tent was pitched, and we had our table set up, and dinner served in; and afterwards, having reposed ourselves (as the custom there is), we were ready to travel again.

I had leisure all this while to observe and wonder at the admirable structure of this part of the country, which may serve, in my opinion, for the eighth wonder of the world; that is to say, supposing there were but seven before. We had in the middle of the day, indeed, a very hot sun, and the reflection from the mountains made it still hotter; but the height of the rocks on every side began to cast long shadows before three o'clock, except where the openings looked towards the west; and as soon as those shadows reached us, the cool breezes of the air came naturally on, and made our way exceeding pleasant and refreshing.

The place we were in was green and flourishing, and the soil well cultivated by the poor industrious Chilians, who lived here in perfect solitude, and pleased with their liberty from the tyranny of the Spaniards, who very seldom visited them, and never molested them, being pretty much out of their way, except when they came for hunting and diversion, and then they used the Chilians always civilly, because they were obliged to them for their assistance in their diversions, the Chilians of those valleys being very active, strong, and nimble fellows.

By this means most of them were furnished with fire-arms, powder, and shot, and were very good marksmen; but, as to violence against any one, they entertained no thought of that

kind, as I could perceive, but were content with their way of living, which was easy and free.

The tops of the mountains here, the valleys being so large, were much plainer to be seen than where the passages were narrow, for there the height was so great that we could see but little. Here, at several distances (the rocks towering one over another), we might see smoke come out of some, snow lying upon others, trees and bushes growing all around; and goats, wild asses, and other creatures, which we could hardly distinguish, running about in various parts of the country.

When we had passed through this second valley, I perceived we came to a narrower passage, and something like the first; the entrance into it indeed was smooth, and above a quarter of a mile broad, and it went winding away to the north, and then again turned round to the north-east, afterwards almost due-east, and then to the south-east, and so to south-south-east; and this frightful narrow strait, with the hanging rocks almost closing together on the top, whose height we could neither see nor guess at, continued about three days' journey more, most of the way ascending gently before us. As to the river, it was by this time quite lost; but we might see, that on any occasion of rain, or of the melting of the snow on the mountains, there was a hollow in the middle of the valley through which the water made its way, and on either hand, the sides of the hills were full of the like gulleys, made by the violence of the rain, where, not the earth only, but the rocks themselves, even the very stone, seemed to be worn and penetrated by the continual fall of the water.

Here my patron showed me, that in the hollow which I mentioned in the middle of this way, and at the bottom of those gulleys, or places worn as above in the rocks, there were often found pieces of gold, and sometimes, after a rain, very great quantities; and that there were few of the little Chilian cottages which I had seen where they had not sometimes a pound or two of gold dust and lumps of gold by them, and he was mistaken, if I was willing to stay and make the experiment, if we did not find some even then, in a very little search.

The Chilian mountaineer at whose house we stopped to dine had gone with us, and he hearing my patron say thus,

ran presently to the hollow channel in the middle, where there was a kind of fall or break in it, which the water, by falling perhaps two or three feet, had made a hollow deeper than the rest, and which, though there was no water then running, yet had water in it, perhaps the quantity of a barrel or two. Here, with the help of two of the servants and a kind of scoop, he presently threw out the water, with the sand, and whatever was at bottom among it, into the ordinary watercourse; the water falling thus hard, every scoopful upon the sand or earth that came out of the scoop before it, washed a great deal of it away; and among that which remained, we might plainly see little lumps of gold shining as big as grains of sand, and sometimes one or two a little bigger.

This was demonstration enough to us. I took up some small grains of it, about the quantity of half a quarter of an ounce, and left my midshipmen to take up more, and they stayed indeed so long, that they could scarce see their way to overtake us, and brought away about two ounces in all, the Chilian and the servants freely giving them all they found.

When we had travelled about nine miles more in this winding frightful narrow way, it began to grow towards night, and my patron talked of taking up our quarters as we had before; but his gentleman put him in a mind of a Chilian, one of their old servants, who lived in a turning among the mountains, about half a mile out of our way, and where we might be accommodated with a house, or place at least, for our cookery. Very true, says our patron, we will go thither; and there, seignior, says he, turning to me, you shall see an emblem of complete felicity, even in the middle of this seat of horror; and you shall see a prince greater, and more truly so, than King Philip, who is the greatest man in the world.

Accordingly we went softly on, his gentleman having advanced before, and in about half a mile we found a turning or opening on our left, where we beheld a deep large valley, almost circular, and of about a mile diameter, and abundance of houses or cottages interspersed all over it, so that the whole valley looked like an inhabited village, and the ground like a planted garden.

We who, as I said, had been for some miles ascending, were so high above the valley, that it looked as the lowlands in England do below Box Hill in Surrey; and I was going to ask how we should get down? but, as we were come into

a wider space than before, so we had more daylight; for though the hollow way had rendered it near dusk before, now it was almost clear day again.

Here we parted with the first Chilian that I mentioned, and I ordered one of my midshipmen to give him a hat, and a piece of black baize, enough to make him a cloak, which so obliged the man that he knew not what way to testify his joy; but I knew what I was doing in this, and I ordered my midshipman to do it that he might make his acquaintance with him against another time, and it was not a gift ill bestowed, as will appear in its place.

We were now obliged to quit our mules, who all took up their quarters at the top of the hill, while we, by footings made in the rocks, descended, as we might say, down a pair of stairs of half a mile long, but with many plain places between, like foot-paces, for the ease of going and coming.

Thus, winding and turning to avoid the declivity of the hill, we came very safe to the bottom, where my patron's gentleman brought our new landlord, that was to be, who came to pay his compliments to us.

He was dressed in a jerkin made of otter-skin, like a doublet, a pair of long Spanish breeches, of leather dressed after the Spanish fashion, green, and very soft, and which looked very well, but what the skin was, I could not guess; he had over it a mantle of a kind of cotton, dyed in two or three grave brown colours, and thrown about him like a Scotsman's plaid; he had shoes of a particular make, tied on like sandals, flat-heeled, no stockings, his breeches hanging down below the calf of his leg, and his shoes lacing up above his ancles. He had on a cap of the skin of some small beast like a racoon, with a bit of the tail hanging out from the crown of his head backward, a long pole in his hand, and a servant, as oddly dressed as himself, carried his gun; he had neither spado nor dagger.

When our patron came up, the Chilian stepped forward and made him three very low bows, and then they talked together, not in Spanish, but in a kind of mountain jargon, some Spanish, and some Chilian, of which I scarce understood one word. After a few words, I understood he said something of a stranger come to see, and then, I supposed, added, the passages of the mountains; then the Chilian came towards me, made me three bows, and bade me welcome in

Spanish. As soon as he had said that, he turns to his barbarian, I mean his servant, for he was as ugly a looked fellow as ever I saw, and taking his gun from him presented it to me. My patron bade me take it, for he saw me at a loss what to do, telling me that it was the greatest compliment that a Chilian could pay to me; he would be very ill pleased and out of humour if it was not accepted, and would think we did not want to be friendly with him.

As we had not given this Chilian any notice of our coming, more than a quarter of an hour, we could not expect great matters of entertainment, and, as we carried our provision with us, we did not stand in much need of it; but we had no reason to complain.

This man's habitation was the same as the rest, low, and covered with a sedge, or a kind of reed which we found grew very plentifully in the valley where he lived; he had several pieces of ground round his dwelling, enclosed with walls made very artificially with small stones and no mortar; these enclosed grounds were planted with several kinds of garden-stuff for his household, such as plantains, Spanish cabbages, green cocoa, and other things of the growth of their own country, and two of them with European wheat.

He had five or six apartments in his house, every one of them had a door into the open air, and into one another, and two of them were very large and decent, had long tables on one side, made after their own way, and benches to sit to them, like our country people's long tables in England, and mattresses like couches all along the other side, with skins of several sorts of wild creatures laid on them to repose on in the heat of the day, as is the usage among the Spaniards.

Our people set up their tents and beds abroad as before; but my patron told me the Chilian would take it very ill if he and I did not take up our lodging in his house, and we had two rooms provided, very magnificent in their way.

The mattress we lay on had a large canopy over it, spread like the crown of a tent, and covered with a large piece of cotton, white as milk, and which came round every way like a curtain, so that if it had been in the open field it would have been a complete covering. The bed, such as it was, might be nearly as hard as a quilt, and the covering was of the same cotton as the curtain-work, which, it seems, is the

manufacture of the Chilian women, and is made very dexterously ; it looked wild, but agreeably enough, and proper to the place, so I slept very comfortably in it.

But, I must confess, I was surprised at the aspect of things in the night here. It was, as I told you above, near night when we came to this man's cottage (palace I should have called it), and, while we were taking our repast, which was very good, it grew quite night.

We had wax candles brought in to accommodate us with light, which, it seems, my patron's man had provided ; and the place had so little communication with the air by windows, that we saw nothing of what was without doors.

After supper my patron turned to me and said, Come, seignior, prepare yourself to take a walk. What! in the dark, said I, in such a country as this? No, no, says he, it is never dark here, you are now come to the country of everlasting day ; what think you? is not this Elysium? I do not understand you, answered I. But you will presently, says he, when I shall show you that it is now lighter abroad than when we came in. Soon after this some of the servants opened the door that went into the next room, and the door of that room, which opened in the air, stood open, from whence a light of fire shone into the outer room, and so farther into ours. What are they burning there? said I to my patron. You will see presently, says he, adding, I hope you will not be surprised, and then he led me to the outer door.

But who can express the thoughts of a man's heart, coming on a sudden into a place where the whole world seemed to be on fire! The valley was, on one side, so exceeding bright the eye could scarce bear to look at it; the sides of the mountains were shining like the fire itself; the flame from the top of the mountain on the other side casting its light directly upon them. From thence the reflection into other parts looked red, and more terrible; for the first was white and clear, like the light of the sun; but the other, being, as it were, a reflection of light mixed with some darker cavities, represented the fire of a furnace; and, in short, it might well be said here was no darkness; but certainly, at the first view, it gives a traveller no other idea than that of being at the very entrance into eternal horror.

All this while there was no fire, that is to say, no real flame to be seen, only, that where the flame was it shone

clearly into the valley ; but the vuleano, or vulcanoes, from whence the fire issued out (for it seems there was no less than three of them, though at the distanee of some miles from one another), were on the south and east sides of the valley, which was so much on that side where we were, that we could see nothing but the light ; neither on the other side could they see any more, it seems, than just the top of the flame, not knowing anything of the plaees from whence it issued out, which no mortal creature, no, not of the Chilians themselves, were ever hardy enough to go near. Nor would it be possible, if any should attempt it, the tops of the hills, for many leagues about them, being covered with new mountains of ashes and stones, which are daily east out of the mouths of those voleanoes, by which they grew every day higher than they were before, and which would overwhelm, not only men, but whole armies of men, if they should venture to come near them.

When first we came into the long narrow way I mentioned last, I observed, as I thought, the wind blew very hard aloft among the hills, and that it made a noise like thunder, which I thought nothing of, but as a thing usual. But now, when I came to this terrible sight, and that I heard the same thunder, and yet found the air calm and quiet, I soon understood that it was a continued thunder, occasioned by the roaring of the fire in the bowels of the mountains.

It must be some time, as may be supposed, before a traveller, unacquainted with such things, could make them familiar to him ; and though the horror and surprise might abate, after proper reflections on the nature and reason of them, yet I had a kind of astonishment upon me for a great while ; every different plaee to which I turned my eye presented me with a new scene of horror. I was for some time frightened at the fire being, as it were, over my head, for I could see nothing of it ; but that the air looked as if it were all on fire ; and I could not persuade myself but it would cast down the rocks and mountains on my head ; but I was laughed out of that notion by the company.

After a while, I asked them if these voleanoes did not cast out a kind of liquid fire, as I had seen an aecount of on the eruptions at Mount *Ætna*, which east out, as we are told, a prodigious stream of fire, and run several leagues into the sea ?

Upon my putting this question to my patron, he asked the

Chilian how long ago it was since such a stream, calling it by a name of their own, ran fire? He answered, it ran now, and if we were disposed to walk but three furlongs we should see it.

He said little to me, but asked me if I cared to walk a little way by this kind of light? I told him it was a surprising place we were in, but I supposed he would lead me into no danger.

He said he would assure me he would lead me into no danger; that these things were very familiar to them, but that I might depend there was no hazard, and that the flames which gave all this light were six or seven miles off, and some of them more.

We walked along the plain of the valley about half a mile, when another great valley opened to the right, and gave us a more dreadful prospect than any we had seen before; for at the farther end of this second valley, but at the distance of three miles from where we stood, we saw a livid stream of fire come running down the sides of the mountain for near three quarters of a mile in length, running like melted metal into a mould, until, I supposed, as it came nearer the bottom, it cooled and separated, and so went out of itself.

Beyond this, over the summit of a prodigious mountain, we could see the tops of the clear flame of a volcano, a dreadful one, no doubt, could we have seen it all; and from the mouth of which it was supposed this stream of fire came, though the Chilian assured us that the fire itself was eight leagues off, and that the liquid fire which we saw came out of the side of the mountain, and was two leagues from the great volcano itself, running like liquid metal out of a furnace.

They told me there was a great deal of melted gold ran down with the other inflamed earth in that stream, and that much of the metal was afterwards found there; but this I was to take upon trust.

The sight, as will easily be supposed, was best at a distance, and, indeed, I had enough of it. As for my two midshipmen, they were almost frightened out of all their resolutions of going any farther in this horrible place; and when we stopped they came mighty seriously to me, and begged, for God's sake, not to venture any farther upon the faith of these Spaniards, for that they would certainly carry us all into some mischief or other, and betray us.

I bade them be easy, for I saw nothing in it all that looked

like treachery; that it was true, indeed, it was a terrible place to look on, but it seemed to be no more than what was natural and familiar there, and we should be soon out of it.

They told me very seriously that they believed it was the mouth of hell, and that, in short, they were not able to bear it, and entreated me to go back. I told them I could not think of that, but if they could not endure it, I would give consent that they should go back in the morning. However, we went for the present to the Chilian's house again, where we got a plentiful draught of Chilian wine, for my patron had taken care to have a good quantity of it with us; and in the morning my two midshipmen, who got very drunk over night, had courage enough to venture forward again; for the light of the sun put quite another face upon things, and nothing of the fire was then to be seen, only the smoke.

All our company lodged in the tents here, but myself and my patron, the Spaniard, who lodged within the Chilian's house, as I have said.

This Chilian was a great man among the natives, and all the valley I spoke of, which lay round his dwelling, was called his own. He lived in a perfect state of tranquility, neither enjoying or coveting anything but what was necessary, and wanting nothing that was so. He had gold merely for the trouble of picking it up, for it was found in all the little gulleys and rills of water which, as I have said, came down from the mountains on every side; yet I did not find that he troubled himself to lay up any great quantity, more than served to go to Villa Rica and buy what he wanted for himself and family.

He had, it seems, a wife and some daughters, but no sons; these lived in a separate house, about a furlong from that where he lived, and were kept there as a family by themselves, and if he had any sons they would have lived with him.

He did not offer to go with us any part of our way, as the other had done, but, having entertained us with great civility, took his leave. I caused one of my midshipmen to make him a present, when we came away, of a piece of black baize, enough to make him a cloak, as I did the other, and a piece of blue English serge, enough to make him a jerkin and breeches, which he accepted as a great bounty.

We set out again, though not very early in the morning having, as I said, sat up late, and drank freely over night,

and we found, that after we had been gone to sleep it had rained very hard, and though the rain was over before we went out, yet the falling of the water from the hills made such a confused noise, and was echoed so backward and forward from all sides, that it was like a strange mixture of distant thunder, and though we knew the causes, yet it could not but be surprising to us for awhile.

However, we set forward, the way under foot being pretty good ; and first he went up the steps again by which we had come down, our last host waiting on us thither, and there I gave him back his gun, for he would not take it before.

In this valley, which was the pleasantest by day and the most dismal by night that ever I saw, I observed abundance of goats, as well tame in the enclosures, as wild upon the rocks ; and we found afterwards, that the last were perfectly wild, and to be had, like those at Juan Fernandez, by any one who could catch them. My patron sent off two of his men, just as a huntsman casts off his hounds, to go and catch goats, and they brought us in three, which they shot in less than half an hour, and these we carried with us for our evening supply ; for we made no dinner this day, having fed heartily in the morning about nine, and had chocolate two hours before that.

We travelled now along the narrow winding passage, which I mentioned before, for about four hours, until I found, that though we had ascended but gently, yet that, as we had done so for almost twenty miles together, we were got up to a frightful height, and I began to expect some very difficult descent on the other side ; but we were made easy about two o'clock, when the way not only declined again to the east, but grew wider, though with frequent turnings and windings about, so that we could seldom see above half a mile before us.

We went on thus pretty much on a level, now rising, now falling ; but still I found that we were a very great height from our first entrance, and, as to the running of the water, I found that it flowed neither east nor west, but ran all down the little turnings that we frequently met with on the north side of our way, which my patron told me fell all into the great valley where we saw the fire, and so passed off by a general channel north-west, until it found its way out into the open country of Chili, and so to the South Seas.

We were now come to another night's lodging, which we were obliged to take up with on the green grass, as we did the first night; but, by the help of our proveditor-general, my patron, we fared very well, our goat's flesh being reduced into so many sorts of venison, that none of us could distinguish it from the best venison we ever tasted.

Here we slept without any of the frightful things we saw the night before, except that we might see the light of the fire in the air at a great distance, like a great city in flames, but that gave us no disturbance at all.

In the morning our two hunters shot a deer, or rather a young fawn, before we were awake, and this was the first we met with in this part of our travel, and thus we were provided for dinner even before breakfast-time; as for our breakfast, it was always a Spanish one, that is to say, about a pint of chocolate.

We set out very merrily in the morning, and we that were Englishmen could not refrain smiling at one another, to think how we passed through a country where the gold lay in every ditch, as we might call it, and never troubled ourselves so much as to stoop to take it up; so certain is it, that it is easy to be placed in a station of life where that very gold, the heaping up of which is elsewhere made the main business of man's living in the world, would be of no value, and not worth taking off from the ground; nay, not of signification enough to make a present of, for that was the case here.

Two or three yards of Colchester baize, a coarse rug-like manufacture, worth in London about $15\frac{1}{2}d.$ per yard, was here a present for a man of quality, when, for a handful of gold dust, the same person would scarce say, Thank you; or, perhaps, would think himself not kindly treated to have it offered him.

We travelled this day pretty smartly, having rested at noon about two hours, as before, and, by my calculation, went about twenty-two English miles in all. About five o'clock in the afternoon, we came into a broad, plain open place, where, though it was not properly a valley, yet we found it lay very level for a good way together, our way lying almost east-south-east. After we had marched so about two miles, I found the way go evidently down hill, and, in half a mile more, to our singular satisfaction we found the

water from the mountains ran plainly eastward, and, consequently, to the North Sea.

We saw at a distance several huts or houses of the mountaineer inhabitants, but went near none of them, but kept on our way, going down two or three pretty steep places, not at all dangerous, though something difficult.

We encamped again the next night as before, and still our good caterer had plenty of food for us; but I observed that the next morning, when we set forward, our tents were left standing, the baggage mules tied together to graze, and our company lessened by all my patron's servants, which, when I inquired about, he told me he hoped we should have good quarters quickly without them.

I did not understand him for the present, but it unriddled itself soon after; for, though we travelled four days more in that narrow way, yet he always found us lodging at the cottages of the mountaineers.

The sixth day we went all day up hill; at last, on a sudden, the way turned short east, and opened into a vast wide country, boundless to the eye every way, and delivered us entirely from the mountains of the Andes, in which we had wandered so long.

Any one may guess what an agreeable surprise this was to us, to whom it was the main end of our travels. We made no question that this was the open country extending to the North, or Atlantic Ocean; but how far it was thither, or what inhabitants it was possessed by, what travelling, what provisions to be found by the way, what rivers to pass, and whether any navigable or not, this our patron himself could not tell us one word of, owning frankly to us, that he had never been one step farther than the place where we then stood, and that he had been there only once, to satisfy his curiosity, as I did now.

I told him, that if I had lived where he did, and had servants and provisions at command as he had, it would have been impossible for me to have restrained my curiosity so far as not to have searched through that whole country to the seaside long ago. I also told him it seemed to be a pleasant and fruitful soil, and, no doubt, was capable of cultivations and improvements; and, if it had been only to have possessed such a country in his Catholic majesty's name, it must have been worth while to undertake the discovery for the honour

of Spain; and that there could be no room to question but his Catholic majesty would have honoured the man who should have undertaken such a thing with some particular mark of his favour, which might be of consequence to him and his family.

He answered me, as to that, the Spaniards seemed already to have more dominions in America than they could keep, and much more than they were able to reap the benefit of, and still more infinitely than they could improve, and especially in those parts called South America.

And he, moreover, told me, that it was next to a miracle they could keep possession of the place we were in; and, were not the natives so utterly destitute of support from any other part of the world, as not to be able to have either arms or ammunition put into their hands, it would be impossible, since I might easily see they were men that wanted not strength of body or courage; and it was evident they did not want numbers, seeing they were already ten thousand natives to one Spaniard, taking the whole country from one end to the other.

Thus you see, seignior, added he, how far we are from improvement in that part of the country which we possess, and many more, which you may be sure are among these vast mountains, and which we never discovered, seeing all these valleys and passages among the mountains, where gold is to be had in such quantities, and with so much ease, that every poor Chilian gathers it up with his hands, and may have as much as he pleases, are all left open, naked, and unregarded, in the possession of the wild mountaineers, who are heathens and savages; and the Spaniards, you see, are so few, and those few so indolent, so slothful, and so satisfied with the gold they get of the Chilians for things of small value in trade, that all this vast treasure lies unregarded by them. Nay, continued he, is it not very strange to observe, that, when for our diversion we come into the hills, and among these places where you see the gold is so easily found, we come, as we call it, a-hunting, and divert ourselves more with shooting wild parrots, or a fawn or two, for which also we ride and run, and make our servants weary themselves more than they would in searching for the gold among the gulleys and holes that the water makes in the rocks, and more than would suffice to find fifty, nay, one hundred times

the value in gold! To what purpose, then, should we seek the possession of more countries, who are already possessed of more land than we can improve, and of more wealth than we know what to do with? Perceiving me very attentive, he went on thus:

Were these mountains valued in Europe according to the riches to be found in them, the viceroy would obtain orders from the king to have strong forts erected at the entrance in, and at the coming out of them, as well on the side of Chili, as here, and strong garrisons maintained in them, to prevent foreign nations landing, either on our side in Chili, or on this side in the North Seas, and taking the possession from us. He would then order thirty thousand slaves, negroes or Chilians, to be constantly employed, not only in picking up what gold might be found in the channels of the water, which might easily be formed into proper receivers, so as that if any gold washed from the rocks it should soon be found, and be so secured, as that none of it would escape; also others, with miners and engineers, might search into the very rocks themselves, and would no doubt find out such mines of gold, or other secret stores of it in these mountains, as would be sufficient to enrich the world.

While we omit such things as these, seignior, says he, what signifies Spain making new acquisitions, or the people of Spain seeking new countries? This vast tract of land you see here, and some hundreds of miles every way which your eye cannot reach to, is a fruitful, pleasant, and agreeable part of the creation, but perfectly uncultivated, and most of it uninhabited; and any nation in Europe that thinks fit to settle in it are free to do so, for anything we are able to do to prevent them.

But, seignior, says I, does not his Catholic majesty claim a title to the possession of it? and have the Spaniards no governor over it? nor any ports or towns, settlements, or colonies in it, as is the case here in Chili? Seignior, replied he, the king of Spain is lord of all America, as well that which he possesses as that which he possesses not, that right being given him by the Pope, in the right of his being a Christian prince, making new discoveries for propagating the Christian faith among infidels; how far that may pass for a title among the European powers I know not. I have heard that it has always passed for a maxim in Europe, that

no country which is not planted by any prince or people can be said to belong to them; and, indeed, I cannot say but it seems to be rational, that no prince should pretend to any title to a country where he does not think fit to plant and to keep possession. For, if he leaves the country unpossessed, he leaves it free for any other nation to come and possess; and this is the reason why the former kings of Spain did not dispute that right of the French to the colonies of the Mississippi and Canada, or the right of the English to the Caribee islands, or to their colonies of Virginia and New England.

In like manner, from the Buenos Ayres, in the Rio de la Plata, which lies that way (pointing north-east), to the Fretum Magellanicum, which lies that way (pointing south-east), which comprehends a vast number of leagues, is called by us Coasta Deserta, being unpossessed by Spain, and disregarded of all our nation; neither is there one Spaniard in it. Nevertheless, you see how fruitful, how pleasant, and how agreeable a climate it is; how apt for planting and peopling it seems to be, and, above all, what a place of wealth here would be behind them, sufficient, and more than enough, both for them and us; for we should have no reason to offer them any disturbance, neither should we be in any condition to do it, the passages of the mountains being but few and difficult, as you have seen, and our numbers not sufficient to do anything more than to block them up, to keep such people from breaking in upon our settlements on the coast of the South Seas.

I asked him if these notions of his were common among those of his country who were settled in Chili and Peru? or whether they were his own private opinions only? I told him I believed the latter, because I found he acted in all his affairs upon generous principles, and was for propagating the good of mankind; but, that I questioned whether their governor of Old Spain, or the sub-governor and viceroy of New Spain, acted upon those notions; and, since he had mentioned the Buenos Ayres and the Rio de la Plata, I should take that as an example, seeing the Spaniards would never suffer any nation to set foot in that great river, where so many countries might have been discovered, and colonies planted; though, at the same time, they had not possessed, or fully discovered those places themselves.

He answered me, smiling; Seignior, says he, you have given the reason for this yourself, in that very part which you think is a reason against it. We have a colony at Buenos Ayres, and at the city of Ascension, higher up in the Rio de la Plata, and we are not willing to let any other nation settle there, because we would not let them see how weak we are, and what a vast extent of land we possess there with a few men; and this for two reasons:

First, We are possessed of the country, and daily increasing there, and may in time extend ourselves farther. The great rivers Parana and Paraguay being yet left for us to plant in, and we are not willing to put ourselves out of a capacity of planting farther, and therefore we keep the possession.

Secondly, We have a communication from thence with Peru. The great river la Plata rises at the city of that name, and out of the mountain Potosi, in Peru, and a great trade is carried on by that river, and it would be dangerous to let foreigners into the secret of that trade, which they might entirely cut off, especially when they should find how small a number of Spaniards are planted there to preserve it, seeing there are not six hundred Spaniards in all that vast country, which, by the course of that river, is more than one thousand six hundred miles in length.

I confess, said I, these are just grounds for your keeping the possession of that river. They are so, said he, and the more because of so powerful a colony as the Portuguese have in the Brazils, which bound immediately upon it, and who are always encroaching upon it from the land side, and would gladly have a passage up the Rio Parana to the back of their colony.

But here, seignior, says he, the case differs; for we neither take nor keep possession here, neither have we one Spaniard, as I said, in the whole country now before you, and therefore we call this country Coasta Deserta. Not that it is a desert, as that name is generally taken to signify, a barren, sandy, dry country; on the contrary, the infinite prodigious increase of the European black cattle which were brought by the Spaniards to the Buenos Ayres, and suffered to run loose, is a sufficient testimony of the fruitfulness and richness of the soil, their numbers being such, that they kill above twenty thousand in a year for nothing but the hides,

which they carry away to Spain, leaving the flesh, though fat and wholesome, to perish on the ground, or be devoured by birds of prey.

And the number is so great, notwithstanding all they destroy, that they are found to wander sometimes in droves of many thousands together over all the vast country between the Rio de la Plata, the city of Aseension, and the frontier of Peru, and even down into this country which you see before us, and up to the very foot of these mountains.

Well, said I, and is it not a great pity that all this part of the country, and in such a climate as this is, should lie uncultivated, or uninhabited rather? for I understand there are not any great numbers of people to be found among them.

It is true, added he, there are some notions prevailing of people being spread about in this country, but, as the terror of our people, the Spaniards, drove them at first from the seacoast towards these mountains, so the greatest part of them continue on this side still, for towards the coast it is very rare that they find any people.

I would have inquired of him about rivers and navigable streams which might be in this country, but he told me frankly that he could give me no account of those; only thus, that if any of the rivers went away towards the north, they certainly run all into the great Rio de la Plata; but that if they went east, or southerly, they must go directly to the coast, which was ordinarily called, as he said, La Costa Deserta, or, as by some, the coast of Patagonia. That, as to the magnitude of those rivers he could say little, but it was reasonable to suppose there must be some very considerable rivers, and whose streams must needs be capable of navigation, seeing abundance of water must continually flow from the mountains where we then were, and its being at least four hundred miles from the sea-side, those small streams must necessarily join together, and form large rivers in the plain country.

I had enough in this discourse fully to satisfy all my curiosity, and sufficiently to heighten my desire of making the farther discoveries which I had in my thoughts.

We pitched our little camp here, and sat down to our repast; for I found that though we were to go back to lodge, yet my patron had taken care we should be furnished suffi-

ciently for dinner, and have a good house to eat it in, that is to say, a tent as before.

The place where we stood, though we had come down hill for a great way, yet seemed very high from the ordinary surface of the country, and gave us therefore an exceeding fine prospect of it, the country declining gradually for near ten miles; and we thought, as well as the distance of the place would allow us, we saw a great river, but, as I learned afterwards, it was rather a great lake than a river, which was supplied by the smaller rivers, or rivulets, from the mountains, which met there as in a great receptacle of waters, and out of this lake they all issued again in one river, of which I shall have occasion to give a farther account hereafter.

While we were at dinner, I ordered my midshipmen to take their observations of every distant object, and to look at everything with their glasses, which they did, and told me of this lake; but my patron could give no account of it, having never been, as he said before, one step farther that way than where we were.

However, my men showed me plainly that it was a great lake, and that there went a large river from it towards the east-south-east, and this was enough for me, for that way lay all the schemes I had laid.

I took this opportunity to ask my midshipmen, first, if they had taken such observations in their passage of the mountains as that they were sure they could find their way through to this place again without guides? And they assured me they could.

Then I put it to them whether they thought it might not be practicable to travel over that vast level country to the North Seas? and to make a sufficient discovery of the country, so as that hereafter Englishmen coming to the coast on the side of those seas, might penetrate to these golden mountains, and reap the benefit of the treasure without going a prodigious length above Cape Horn and the Terra del Fuego, which was always attended with innumerable dangers, and without breaking through the kingdom of Chili and the Spaniards' settlements, which, perhaps, we might soon be at peace with, and so be shut out that way by our own consents?

One of my men began to speak of the difficulties of such an attempt, the want of provisions, and other dangers which

we should be exposed to on the way ; but the other, a bold, brisk fellow, told me he made no question but it might be easily done, and especially because all the rivers they should meet with would, of course, run along with us, so that we should be sure to have the tide with us, as he called it ; and, at last, he added, that he would be content to be one of those men who should undertake it, provided he should be assured that the ships in the mean time would not go away, and pretend that they could not be found.

I told him, we would talk farther about it ; that I had such a thought in my head, and a strong inclination to undertake it myself, but that I could not answer it to leave the ships, which depended so much upon my care of the voyage.

After some talk of the reasonableness of such an undertaking, and the methods of performing it, my second midshipman began to come into it, and to think it was practicable enough, and added, that though he used some cautions in his first hearing proposals, yet, if he undertook that enterprise, I should find that he would do as much of his duty in it as another man ; and so he did at last, as will appear in its proper place.

We were, by this time, preparing to be satisfied with our journey, and my patron coming to me and asking if I was for returning, I told him I could not say how many days it would be before I should say I had enough of that prospect, but that I would return when he pleased, only I had one question to ask him, which was, whether the mountains were as full of gold on this side as they were on the side of Chili ?

As to that, seignior, says he, the best way to be certain is to make a trial, that you may be sure we do not speak without proof ; so he called his gentleman, and another servant that was with him, and desired me to call my two midshipmen, and, speaking something to his own servants first, in the language of the country, as I supposed, he turned to me, and said, Come, let us sit down and rest ourselves, while they go together, and see what they can do.

Accordingly, they went away, and, as my men told me afterwards, they searched in the small streams of water which they found running, and in some larger gulleys or channels, where they found little or no water running, but where, upon hasty rains, great shoots of water had been used to

run, and where water stood still in the holes and falls, as I have described once before on the like occasion.

They had not been gone above an hour, when I plainly heard my two Englishmen halloo, which I could easily distinguish from the voices of any other nation, and immediately I ran out of the tent, Captain Merlotte followed, and then I saw one of my midshipmen running towards us, so we went to meet him, and, what with hallooming and running, he could hardly speak; but, recovering his breath, said, he came to desire me to come to them, if I would behold a sight which I never saw in my life.

I was eager enough to go, so I went with him, and left Captain Merlotte to go back to the tent to my patron, the Spaniard, and the Spanish doctor, who had not so much share in the curiosity; he did so, and they followed soon after.

When we came to the place, we saw such a wonder as indeed I never saw before, for there they were sitting down round a little puddle, or hole, as I might call it, of water, where, in the time of rain, the water running hastily from a piece of the rock, about two foot higher than the rest, had made a pit under it with the fall, like the tail of a mill, only much less.

Here they took up the sand or gravel with their hands, and every handful brought up with it such a quantity of gold as was surprising; for there they sat picking it out, just as the boys in London, who go with a broom and a hat, pick out old iron, nails, and pins from the channels, and it lay as thick.

I stood and looked at them awhile, and it must be confessed, it was a pleasant sight enough; but, reflecting immediately that there was no end of this, and that we were only upon the enquiry, Come away, said I, laughing to my men, and do not stand picking up of trash there all day; do you know how far we have to go to our lodgings?

I can make no guess what quantity might have been found here in places which had, for hundreds of years, washed gold from the hills, and, perhaps, never had a man come to pick any of it up before; but I was soon satisfied that here was enough, even to make all the world say they had enough; and so I called off my people, and came away.

It seems, the quantity of gold which is thus washed down is not small, since my men, inquiring afterwards among the Chilians, heard them talk of the great lake of water which

I mentioned just now that we saw at a distance, which they call the Golden Lake, and where was, as they said, prodigious quantities of it; not that our men supposed any gold was there in mines, or in the ordinary soil, but that the waters from the hills, running with very rapid currents at certain times in the rainy seasons, and after the melting of the snows, had carried the gold so far as that lake; and, as it has been so, perhaps, from the days of the general deluge, no people ever applying themselves to gather the least grain of it up again, it might well be increased to such a quantity as might entitle that water to the name of the Golden Lake, and all the little streams and sluices of water that run into it deserved the name of Golden Rivers, as much as that of the Golden Lake.

But my present business was to know only if the gold was here, but not to trouble myself to pick it up; my views lay another way, and my end was fully answered, so I came back to my patron, and brought all my men with me.

You live in a golden country, seignior, says I; my men are stark mad to see so much gold, and nobody to take it.

Should the world know what treasure you have here, I would not answer for it that they should not flock hither in armies, and drive you all away. They need not do that, seignior, says he, for here is enough for them, and for us too.

We now packed up, and began our return; but it was not without regret that I turned my back upon this pleasant country, the most agreeable place of its kind that ever I was at in all my life, or ever shall be in again, a country rich, pleasant, fruitful, wholesome, and capable of everything for the life of man that the heart could entertain a wish for.

But my present work was to return; so we mounted our mules, and had, in the meantime, the pleasure of contemplating what we had seen, and applying ourselves to such farther measures as we had concerted among us. In about four hours we returned to our camp, as I called it, and, by the way, we found, to our no little pain, that though we had come down hill easily and insensibly to the opening for some miles, yet we had a hard pull uphill to go back again.

However, we reached to our tents in good time, and made our first encampment with pleasure enough, for we were very weary with the fatigue of a hard day's journey.

The next day we reached our good Chilian's mansion-

house, or palace, for such it might be called, considering the place, and considering the entertainment; for now he had some time to provide for us, knowing we would come back again.

He met us with three mules, and two servants, about a mile before we came to the descent going down to his house, of which I took notice before, and this he did to guide us a way round to his house without going down those uneasy steps; so we came on our mules to his door, that is to say, on his mules, for he would have my patron, the Spaniard, to whom I observed he showed an extraordinary respect, and Captain Merlotte and myself, mount his fresh mules to carry us to his house.

When we came thither, I observed he wanted the assistance of my patron's servants for his cookery; for, though he had provided abundance of food, he owned he knew not how to prepare it to our liking, so they assisted him, and one of my midshipmen pretending to cook too, made them roast a piece of venison, and a piece of kid, or young goat, admirable well, and putting no garlick or onions into the sauce, but their own juices, with a little wine, it pleased the Spaniard so well, that my man passed for an extraordinary cook, and had the favour asked of him to dress some more after the same manner, when we came back to the Spaniard's house.

We had here several sorts of wildfowl, which the Chilian had shot while we were gone, but I knew none of them by any of the kinds we have in England, except some teal. However, they were very good.

The day was agreeable and pleasant, but the night dreadful, as before, being all fire and flame again, and though we understood both what it was, and where, yet I could not make it familiar to me, for my life. The Chilian persuaded us to stay all the next day, and did his endeavour to divert us as much as possible; my two midshipmen went out with him a-hunting, as he called it, that is, a-shooting; but, though he was a man of fifty years of age, he would have killed ten of them at his sport, running up the hills, and leaping from rock to rock like a boy of seventeen. At his gun he was so sure a marksman, that he seldom missed anything he shot at, whether running, flying, or sitting.

They brought home with them several fowls, two fawns, and a full-grown deer, and we had nothing but boiling,

stewing, and broiling, all that evening. In the afternoon we walked out to view the hills, and to see the stupendous precipices which surrounded us. As for looking for gold, we saw the places where there was enough to be had, but that was become now so familiar to us, that we troubled not ourselves about it, as a business not worth our while; but the two midshipmen, I think, got about the quantity of five or six ounces apiece, while we were chatting or reposing in the Chilian's house.

Here it was that I entered into a confidence with my patron, the Spaniard, concerning my grand design. I told him, in the first place, that my view of the open country beyond these hills, and the particular account he had given me of it also, had raised a curiosity in me that I could scarce withstand; and that I had thereupon formed a design, which, if he would farther me with his assistance, I had a very great mind to put in practice, and that, though I was to hazard perishing in the attempt.

He told me very readily, nothing should be wanting on his part to give me any assistance he could, either by himself or any of his servants; but, smiling, and with abundance of good humour, Seignior, says he, I believe I guess at the design you speak of; you are fired now with a desire to traverse this great country to the Coasta Deserta and the North Seas; that is a very great undertaking, and you will be well advised before you undertake it.

True, Seignior, said I, you have guessed my design, and, were it not that I have two ships under my care, and some cargo of value on board, I would bring my whole ship's company on shore, and make the adventure, and, perhaps, we might be strong enough to defend ourselves against whatever might happen by the way.

As to that, seignior, says he, you would be in no danger that would require so many men; for you will find but few inhabitants anywhere, and those not in numbers sufficient to give you any trouble; fifty men would be as many as you would either want or desire, and, perhaps, as you would find provisions for; and, for fifty men, we might be able to carry provisions with us to keep them from distress. But, if you will accept of my advice, as well as assistance, seignior, says he, choose a faithful strong fellow out of your ship on whom you can depend, and give him fifty men with him, or there-

abouts, and such instructions as you may find needful, as to the place on the coast where you would have them fix their stay, and let them take the first hazards of the adventure ; and, as you are going round by sea, you will, if success follows, meet them on the shore, and if the account they give of their journey encourage you, you may come afterwards yourself up to these very mountains, and take a farther view ; in which case, he added, with a solemn protestation, cost me what it will, I will come and meet you one hundred miles beyond the hills, with supplies of provisions and mules for your assistance.

This was such wholesome and friendly advice, and he offered it so sincerely, that though it was very little differing from my own design, yet I would not be seen so to lessen his prudence in the measures of his friendship in advising it, as to say that I had resolved to do so ; but making all possible acknowledgment to him for his kind offers, I told him I would take his advice, and act just according to the measures he had prescribed ; and, at the same time I assured him, that if I found a convenient port to settle and fortify in, I would not fail to come again from France (for we passed always as acting from France, whatever nation we were of) to relieve and supply them ; and that, if ever I returned safe, I would not fail to correspond with him, by the passages of the mountains, and make a better acknowledgment for his kindness than I had been able to do yet.

He was going to break off the discourse upon the occasion of the Chilian's returning, who was just come in from his hunting, telling me, he would talk farther of it by the way ; but I told him I could not quite dismiss the subject, because I must bespeak him to make some mention of it to the Chilian, that he might, on his account, be an assistant to our men, as we saw he was capable of being, in their passing by those difficult ways, and for their supply of provisions, &c. Trouble not yourself with that, seignior, said he, for when your men come, the care shall be mine ; I will come myself as far as this wealthy Chilian's, and procure them all the assistance this place can afford them, and do anything that offers to forward them in the undertaking.

This was so generous, and so extraordinary, that I had nothing to say more, but to please myself with the apparent success of my attempt, and acknowledge the happiness of

having an opportunity to oblige so generous, spirited, and grateful a person.

I would, however, have made some farther acknowledgment to our Chilian benefactor, but I had nothing left, except a couple of hats, and three pair of English stockings, one pair silk and the other two worsted, and those I gave him, and made him a great many acknowledgments for the favours he had shown us, and the next morning came away.

We made little stay anywhere else in our return; but, making much such stages back as we did forward, we came the fourteenth day to our patron's house, having made the passage through in something less than sixteen days, and the like back in fifteen days, including our stay at the Chilian's, one day.

The length of the way, according to the best of my calculations, I reckoned to be about one hundred and seventy-five English miles, taking it with all its windings and turnings, which were not a few, but which had this conveniency with them, that they gave a more easy and agreeable passage, and made the English proverb abundantly good, namely, that the farthest way about is the nearest way home.

The civilities I received after this from my generous Spaniard were agreeable to the rest of his usage of me; but we, that had so great a charge upon us at the sea-side, could not spare long time in those ceremonies, any more than I do now for relating them.

It is enough to mention, that he would not be excused, at parting, from going back with us quite to the ships, and when I would have excused it, he said, Nay, seignior, give me leave to go and fetch my hostages. In short, there was no resisting him, so we went all together, after staying two days more at his house, and came all safe to our ships, having been gone forty-six days from them.

We found the ship in very good condition, all safe on board, and well, except that the men seemed to have contracted something of the scurvy, which our Spanish doctor, however, soon recovered them from.

Here we found the two Spanish youths, our patron's hostages, very well also, and very well pleased with their entertainment; one of our lieutenants had been teaching them navigation, and something of the mathematics, and they made very good improvement in those studies, considering the time

they had been there; and the Spaniard, their father, was so pleased with it, that not having gold enough to offer the lieutenant, as an acknowledgment for his teaching them, he gave him a very good ring from his finger, having a fine large emerald in it of some value, and made him a long Spanish compliment for having nothing of greater consequence to offer him.

We now made preparations for sailing, and our men, in my absence, had laid in a very considerable supply of provisions, particularly excellent pork, and tolerable good beef, with a great number of goats and hogs alive, as many as we could stow.

But I had now my principal undertaking to manage, I mean that of sending out my little army for discovery, and, having communicated my design to the supercargo, and the person whom I intrusted with him in the command of the ships, they unanimously approved of the scheme. My next business was to resolve upon whom to confer the command of the expedition; and this, by general consent, fell upon the lieutenant of the Madagascar ship, who had taught the young Spaniards navigation, and this the rather, because he was naturally a bold enterprising man, and also an excellent geographer; indeed, he was a general artist, and a man faithful and vigilant in whatever he undertook, nor was it a little consideration with me, that he was so agreeable to the Spaniard and his sons, of whose aid we knew he would stand in so much need.

When I had communicated to him the design, and he had both approved of the undertaking itself, and accepted the command, we constituted him captain, and the two midshipmen we made lieutenants for the expedition, promising each of them 500*l.* if they performed it. As for the captain, we came to a good agreement with him for his reward; for I engaged to give him a thousand pounds in gold as soon as we met, if the journey was performed effectually.

We then laid open the design to the men, and left it to every one's choice to go, or not to go, as they pleased; but, instead of wanting men to go volunteers, we were fain to decide it by lot among some of them, they were all so eager to undertake it.

Then I gave them articles and conditions, which they who ventured should engage themselves to comply with, and

particularly, that they should not mutiny, upon pain of being shot to death when we met, or upon the spot, if the captain thought it necessary; that they should not straggle from their company, nor be tempted by the view of picking up gold to stay behind, when the company beat to mareh; that all the gold they found in the way should be common, should be put together in a bulk every night, and be divided faithfully and equally at the end of the journey, allowing only five shares to each ship, to be divided as I should direct. Besides which, upon condition that every man behaved himself faithfully and quietly, and did his duty, I promised, that besides the gold he might get by the way, I would give to all one hundred pounds each at our meeting; and, if any man was sick, or maimed by the way, the rest were to engage not to forsake and leave him on any account whatsoever, death only excepted. And if any man died, except by any violence from the rest, his share of the gold which was gotten should be faithfully kept for his family, if he had any; but his reward of one hundred pounds, which was not due, because he did not live to demand it, should be divided among the rest; so that by this agreement, the undertaking was not so dear to me as I had expected, for the pay of the men amounted to no more than the sum following, viz.—

To the lieutenant, now made captain	£1000
To the midshipmen, now made lieutenants, each 500l.	1000
To fifty men, each 100l.	5000
To the surgeon 200l., and his servant 100l., over and above their 100l. as being part of the fifty men	300
	<hr/>
	£7300

Having pitched upon the men, I landed them, and made them encamp on shore; but, first of all, I made them every one make wills or letters of attorney, or other dispositions, of their effects to such persons as they thought fit, with an account under their hands, endorsed on the back of the said wills, &c., intimating what chests or cases or other things they had on board, and what was in them, and what pay was due to them; and those chests, &c., were sealed up be-

fore their faces with my seal, and writings signed by me, the contents unknown. Thus they were secure that all they had left in the ships, and all that was due to them, should be punctually and carefully kept and delivered as it was designed and directed by themselves, and this was greatly to their satisfaction.

As to the reward of one hundred pounds a man, and the articles about keeping together, obeying orders, gathering up gold, and the like, I did not read to them till they were all on shore, and till I was ready to leave them; because, if the rest of the men had heard it, I should have kept nobody with me to have sailed the ships.

There was as stout a company of bold, young brisk fellows of them, as ever went upon any expedition, fifty-three in number; among them a surgeon and his mate, very skilful and honest men both of them, a trumpeter and a drummer, three ship-carpenters, a cook, who was also a butcher by trade, and a barber, two shoemakers who had been soldiers among the pirates, a smith, and a tailor of the same, so that they wanted no mechanics, whatever might happen to them.

Give the fellows their due, they took but little baggage with them; but, however, what they had, I took care, with the assistance of my patron, the Spaniard, should be as much carried for them as possible.

I provided them three large tents made of a cotton stuff, which I bought in the country, and which we made up on board, which tents were large enough to cover them all, in case of rain or heat; but as for beds or bedding, they had only seven hammocks, in case any man was sick; for the rest, they were to shift as well as they could; the season was hot, and the climate good. Their way lay in the latitude of 40 to 50°, and they set out in the latter end of the month of October, which, on that side of the line, is the same as our April; so that the covering was more to keep them from the heat than the cold.

It was needful, in order to their defence, to furnish them with arms and ammunition; so I gave to every man a musket or fuzee, a pistol, and a sword, with cartouches and a good stock of ammunition, powder and shot, with three small barrels of fine powder for store, and lead in proportion; and these things were, indeed, the heaviest part of their baggage,

excepting the carpenters' tools and the surgeon's box of medicines.

As for the carrying all these things, they might easily furnish themselves with mules or horses for carriage, while they had money to pay for them, and you may judge how that could be wanting, by what has been said of the country.

We gave them, however, a good large pack of European goods, to make agreeable presents where they received favours; such as black baize, pieces of say, serge, calamanco, drugget, hats and stockings; not forgetting another pack of hatchets, knives, scissors, beads, toys, and such things, to please the natives of the plain country, if they should meet with any.

They desired a few hand granadoes, and we gave them about a dozen; but, as they were heavy, it would have been very troublesome to have carried more.

The Spaniard stayed till all this was done, and till the men were ready to march, and then told us privately, that it would not be proper for him to march along with them, or to appear openly to countenance the enterprise; that my two lieutenants knew the way perfectly well; and that he would go before to his own house, and they should hear of him by the way.

All the mules and horses which he had lent us to bring us back he left with them to carry their baggage, and our new captain had bought six more privately in the country.

The last instructions I gave to our men were, that they should make the best of their way over the country beyond the mountains; that they should take the exact distances of places, and keep a journal of their march, set up crosses and marks at all proper stations; and that they should steer their course as near as they could between the latitude of 40° , where they would enter the country, and the latitude of 45° south, so that they would go an east-south-east course most of the way, and that wherever they made the shore they should seek for a creek or port where the ships might come to an anchor, and look out night and day for the ships; the signals also were agreed on, and they had two dozen of rockets to throw up if they discovered us at sea; they had all necessary instruments for observation also, and perspective glasses, pocket compasses, &c., and thus they set out, October 24th, 1715.

We stayed five days after they began their march, by agreement, that if any opposition should be offered them in the country, or any umbrage taken at their design, so that it could not be executed, we might have notice. But as the Spaniards in the country, who are the most supinely negligent people in the world, had not the least shadow of intelligence, and took them only to be French seamen belonging to the two French ships (such we past for) who had lain there so long, they knew nothing when they went away, much less whither; but, no question, they believed that they were all gone aboard again.

We stayed three days longer than we appointed, and hearing nothing amiss from them, we were satisfied that all was right with them; so we put to sea, standing off to the west, till we were out of sight of the shore, and then we stood away due south, with a fresh gale at north-west-by-west, and fair weather, though the wind chopped about soon after, and we had calms and hot weather that did us no good, but made our men sick and lazy.

The supposed journey of our travellers, their march, and the adventures they should meet with by the way, were, indeed, sufficient diversion, and employed us all with discourse, as well in the great cabin and roundhouse as afore the mast, and wagers were very rife among us, who should come first to the shore of Patagonia, for so we called it.

As for the place, neither they nor we could make any guess at what part of the country they should make the sea; but, as for us, we resolved to make the port St. Julian our first place to put in at, which is in the latitude of $50^{\circ} 5'$ and that then, as wind and weather would permit, we would keep the coast as near as we could, till we came to Punta de St. Helena, where we would ride for some time, and, if possible, till we heard of them.

We had but a cross voyage to the mouth of the Straits of Magellan, having contrary winds, as I have said, and sometimes bad weather; so that it was the 13th of December when we made an observation, and found ourselves in the latitude of $52^{\circ} 30'$, which is just the height of Cape Victoria, at the mouth of the passage.

Some of our officers were very much for passing the Straits, and not going about by Cape Horn; but the uncertainty of the winds in the passage, the danger of the currents, &c.,

made it by no means advisable, so we resolved to keep good sea-room.

The 25th of December, we found ourselves in the latitude of $62^{\circ} 30'$, and being Christmas-day, I feasted the men, and drank the health of our travellers. Our course was south-east-by-south, the wind south-west; then we changed our course, and went east for eight days, and having changed our course, stood away, without observation, east-north-east, and in two days more, made the land, on the east of the Strait de la Mare, so that we were obliged to stand away east-south-east to take more sea-room, when the wind veering to the south-by-east, a fresh gale, we stood boldly away due north, and running large, soon found that we were entered into the North Sea on Twelfth Day; for joy of which, and to celebrate the day, I gave every mess a piece of English beef, and a piece of Chilian pork, and made a great bowl of punch afore the mast, as well as in the great cabin, which made our men very cheerful, and instead of a twelfth cake, I gave the cook order to make every mess a good plum-pudding, which pleased them all as well.

But while we were at our liquor and merry, the wind came about to the north-east and blew very hard, threatening us with a storm, and as the shore lay on our leeward quarter, we were not without apprehensions of being driven on some dangerous places, where we could have no shelter; I immediately therefore altered my course, and ran away east all night, to have as much sea-room as possible.

The next day the wind abated, and hauling away to the east, we stood northward again, and then north-west in three days more, and we made land, which appeared to be the head island of Port St. Julian, on the north side of the port, where we ran in, and about an hour before sunset came to an anchor in eleven fathom good holding ground, latitude $49^{\circ} 18'$.

We wanted fresh water, otherwise we would not have made any stay here, for we knew we were a little too far to the south; however, we were obliged to fill fresh water here for three days together, the watering-place being a good way up the river, and the swell of the sea running very high.

During this interval, Captain Merlotte and I went on shore with about thirty men, and marched up the country near twenty miles, getting up to the top of the hills, where we

made fires, and at the farthest hill we encamped all night, and threw up five rockets, which was our signal; but we saw nothing to answer it, nor any sign either of English people or natives in all the country.

We saw a noble champaign country, the plains all smooth, and covered with grass like Salisbury Plain; very little wood to be seen anywhere, insomuch that we could not get any thing but grass to make a smoke with, which was another of our signals.

We shot some fowls here, and five or six hares; the hares are as large as an English fox, and burrow in the earth like a rabbit. The fowls we shot were duck and mallard, teal and widgeon, the same as in England in shape and size, only the colour generally grey, with white in the breast, and green heads; the flesh the same as ours, and very good.

We saw wild geese and wild swans, but shot none; we saw also guinacoes, or Peruvian sheep, as big as small mules, but could not get at them; for as soon as we stepped toward them, they would call to one another, to give notice of us, and then troop altogether and be gone.

This is an excellent country for feeding and breeding of sheep and horses, the grass being short, but very sweet and good on the plains, and very long and rich near the fresh rivers, and were it cultivated and stocked with cattle, would without doubt produce excellent kinds of all sorts of cattle; nor could it fail producing excellent corn, as well wheat as barley and oats; and as for peas, they grow wild all over the country, and nourish an infinite number of birds resembling pigeons, which fly in flights so great, that they seem in the air like clouds at a great distance.

As for the soil, that of the hills is gravel, and some stony; but that of the plains is a light black mould, and in some places a rich loam, and some marl, all of which are tokens of fruitfulness, such as indeed never fail.

The 14th of January (the weather being hot, and days long, for this was their July), we weighed and stood northerly along the shore, the coast running from Port St. Julian north-north-east, until we arrived at the famous islands called Penguin Islands; and here we came to an anchor again, in the same round bay which Sir John Narborough called Port Desire, it being the 17th of January.

Here we found a post or cross, erected by Sir John Nar-

borough, with a plate of copper nailed to it, and an inscription, signifying that he had taken possession of that country in the name of Charles the Second.

Our men raised a shout for joy that they were in their own king's dominions, or as they said, in their own country ; and indeed, excepting that it was not inhabited by Englishmen, and cultivated, planted, and enclosed after the English manner, I never saw a country so much like England.

Here we victualled our ships with a new kind of food, for we loaded ourselves with seals, of which here are an infinite number, and which we salted and ate, and our men liked them wonderfully for awhile, but they soon began to grow weary of them ; also the penguins are a very wholesome diet, and very pleasant, especially when a little salted ; and as for salt, we could have loaded our ships with it, being very good and white, made by the sun, and found in standing ponds of salt water, near the shore.

The penguins are so easily killed, and are found in such vast multitudes on that island (which for that reason is so called), that our men loaded the long-boat with them twice in one day, and we reckoned there were no less than seven thousand in the boat each time.

Here we travelled up into the country in seach of our men, and made our signals, but had no answer to them, nor heard any intelligence of them. We saw some people here at a distance, scattering about ; but they were but few, nor would they be brought by any means to converse with us, or come near us.

We spread ourselves over the country far and wide ; and here we shot hares and wild-fowl again in abundance, the country being much the same as before, but something more bushy, and here and there a few trees, but they were a great way off. There is a large river which empties itself into this bay.

Finding no news here of our men, I ordered the Madagascar ship to weigh and stand farther north, keeping as near the shore as he might with safety, and causing his men to look out for the signals, which, if they discovered, they should give us notice by firing three guns.

They sailed the height of Cape Blanco, where the land falling back, makes a deep bay, and the sea receives into it a great river at several mouths, some of them twenty leagues

from the other, all farther north. Here they stood into the bay until they made the land again; for at the first opening of the bay they could not see the bottom of it, the land lying very low.

The captain was doubtful what he should do upon the appearance of so large a bay, and was loath to stand farther in, lest the land, pushing out into the sea again afterwards, and a gale springing up from the seaward, they might be shut into a bay where they had no knowledge of the ground; and upon this caution, they resolved among themselves to come to an anchor for that evening, and to put farther out to sea the next morning.

Accordingly the next morning he weighed and stood off to sea; but the weather being very fine, and the little wind that blew being south-west-by-south, he ventured to stand in for the shore, where he found two or three small creeks, and one large river; and sending in his shallop to sound, and find out a good place to ride in, upon their making the signal to him that they had found such a place, he stood in, and came to an anchor in eleven fathom good ground, half a league from the shore, and well defended from the northerly and easterly winds, which were the winds we had any reason to fear.

Having thus brought his ship to an anchor, he sent his shallop along the shore to give me an account of it, and desire me to come up to him, which accordingly we did; and here we resolved to ride for some time, in hopes to hear from our little army.

We went on shore, some or other of us, every day, and especially when five of our men, going on shore on the north side of the river, had shot three Peruvian sheep and a black wild bull; for after that they ranged the country far and near to find more, but could never come within shot of them, except three bulls and a cow, which they killed after a long and tedious chase.

We lay here till the 16th of February, without any news of our travellers, as I called them. All the hopes we had was, that five of our men asking my leave to travel, swore to me they would go quite up to the Andes but they would find them; nay, they would go to the Spanish gentleman himself, if they did not hear of them; and obliged me to stay twenty days for them, and no longer. This I readily

promised, and giving them everything they asked, and two Peruvian sheep to carry their ammunition, with two dozen of rockets for signals, a speaking trumpet, and a good perspective glass, away they went ; and from them we had yet heard no news, so that was our present hope.

They travelled, as they afterwards gave an account, one hundred and twenty miles up the country, till they were at last forced to resolve to kill one of their guinacoes, or sheep, to satisfy their hunger, which was a great grief to them, for their luggage was heavy to carry ; but, I say, they only resolved on it, for just as they were going to do it, one of them roused a deer with a fawn, and, by great good luck shot them both ; for, having killed the doe, the fawn stood still by her till he had loaded his piece again, and shot that also.

This supplied them for four or five days plentifully, and the last day one of my men being by the bank of the river (for they kept as near the river as they could, in hopes to hear of them that way), saw something black come driving down the stream ; he could not reach it, but calling one of his fellows, their curiosity was such, that the other, being a good swimmer, stripped and put off to it, and, when he came to it, he found it was a man's hat ; this made them conclude their fellows were not far off, and that they were coming by water.

Upon this, they made to the first rising ground they could come at, and there they encamped, and at night fired some rockets, and after the third rocket was fired, they, to their great joy, saw two rockets rise up from the westward, and soon after that a third ; and in two days more they all joyfully met.

We had been here, as I have said, impatiently expecting them a great while ; but, at last, the man at the main-top, who was ordered to look out, called aloud to us below, that he saw a flash of fire ; and immediately, the men looking to landward, they saw two rockets rise up in the air at a great distance, which we answered by firing three rockets again, and they returned by one rocket, to signify that they saw our men's signal.

This was a joyful exchange of distant language to both sides ; but I was not there, for, being impatient, I had put out and sailed about ten leagues farther ; but our ship fired three guns to give me notice, which, however, we heard not,

and yet we knew they fired too; for, it being in the night, our men, who were very attentive with their eyes, as well as ears, saw plainly the three flashes of the guns, though they could not hear the report, the wind being contrary.

This was such certain intelligence to me, and I was so impatient to know how things went, that, having also a small gale of wind, I weighed immediately, and stood back again to our other ship; it was not, however, till the second day after we weighed that we came up to them, having little or no wind all the first day; the next day in the morning they spied us, and fired the three guns again, being the signal that they had got news of our friends.

Nothing could be more to my satisfaction than to hear that they had got news, and it was as much to their satisfaction as to ours to be sure, I mean our little army; for if any disaster had happened to us, they had been in a very odd condition; and though they might have found means to subsist, yet they would have been out of all hope of ever returning to their own country.

Upon the signal I stood into the bay, and came to an anchor at about a league to the northward of our other ship, and as far from the shore, and, as it were, in the mouth of the river, waiting for another signal from our men, by which we might judge which side of the river to go ashore at, and might take some proper measures to come at them.

About five o'clock in the evening, our eyes being all up in the air, and towards the hills, for the appointed signals, beheld, to our great surprise, a canoe come rowing to us out of the mouth of the river. Immediately we went to work with our perspective glasses; one said it was one thing, and one said it was another, until I fetched a large telescope out of the cabin, and with that I could easily see they were my own men, and it was to our inexpressible satisfaction that they soon after came directly on board.

It might very well take up another volume to give a farther account of the particulars of their journey, or, rather, their journey and voyage.

How they got through the hills, and were entertained by the generous Spaniard, and afterwards by the wealthy Chilian; how the men, greedy for gold, were hardly brought away from the mountains; and how, once, they had much ado to persuade them not to rob the honest Chilian who had used

them so well, till my lieutenant, then their captain, by a stratagem, seized on their weapons, and threatened to speak to the Spaniard to raise the Chilians in the mountains, and have all their throats cut; and yet even this did not suffice, till the two midshipmen, then their lieutenants, assured them that at the first opening of the hills, and in the rivers beyond, they would have plenty of gold; and one of the midshipmen told them, that if he did not see them have so much gold that they would not stoop to take up any more, they should have all his share to be divided among them, and should leave him behind in the first desolate place they could find.

How this appeased them till they came to the outer edge of the mountains, where I had been, and where my patron, the Spaniard, left them, having supplied them with sixteen mules to carry their baggage, and some guinacoes, or sheep of Peru, which would carry burdens, and afterwards be good to eat also.

Also, how here they mutinied again, and would not be drawn away, being insatiable in their thirst after gold, till about twenty, more reasonable than the rest, were content to move forward; and, after some time, the rest followed, though not till they were assured that the picking up of gold continued all along the river, which began at the bottom of the mountains, and that it was likely to continue a great way farther.

How they worked their way down these streams, with still an insatiable avarice and thirst after the gold, to the lake called the Golden Lake, and how here they were astonished at the quantity they found; how, after this, they had great difficulty to furnish themselves with provisions, and greater still in carrying it along with them until they found more.

I say, all these accounts might suffice to make another volume as large as this. How, at the farther end of the lake, they found that it evacuated itself into a large river, which, running away with a strong current to the south-south-east, and afterwards to the south-by-east, encouraged them to build canoes, in which they embarked, and which river brought them down to the very bay where we found them; but that they met with many difficulties, sunk and staved their canoes several times, by which they lost some of their baggage, and, in one disaster, lost a great parcel of their gold, to their great surprise and mortification. How

at one place, they split two of their canoes, where they could find no timber to build new ones, and the many hardships they were put to before they got other canoes. But I shall give a brief account of it all, and bring it into as narrow a compass as I can.

They set out, as I have said, with mules and horses to carry their baggage, and the Spaniard gave them a servant with them for a guide, who, carrying them by-ways, and unfrequented, so that they might give no alarm at the town of Villa Rica, or anywhere else, they came to the mouth of the entrance into the mountains, and there they pitched their tent.

N. B.—The lieutenant who kept their journal, giving an account of this, merrily, in his sea language, expresses it thus: “Being all come safe into the opening, that is, in the entrance of the mountains, and being there free from the observation of the country, we called it our first port, so we brought to, and came to an anchor.”

Here the generous Spaniard, who at his own request was gone before, sent his gentleman and one of his sons to them, and sent them plenty of provisions, as also caused their mules to be changed for others that were fresh, and had not been fatigued with any of the other part of the journey.

These things being done, the Spaniard's gentleman caused them to decamp, and march two days farther into the mountains, and then they encamped again, where the Spaniard himself came *incognito* to them, and, with the utmost kindness and generosity, was their guide himself, and their purveyor also, though two or three times the fellows were so rude, so ungovernable and unbounded in their hunting after gold, that the Spaniard was almost frightened at them, and told the captain of it. Nor, indeed, was it altogether without cause, for the dogs were so ungrateful, that they robbed two of the houses of the Chilians, and took what gold they had, which was not much, indeed, but it hazarded so much the alarming the country, and raising all the mountaineers upon them, that the Spaniard was upon the point of flying from them, in spite of all their fire-arms and courage.

But the captain begged him to stay one night more, and promised to have the fellows punished, and satisfaction to be made; and so he brought all his men together and talked to them and inquired who it was? but never was such a piece

of work in the world. When the new captain came to talk of who did it, and of punishment, they cried, they all did it, and they did not value all the Spaniards or Indians in the country; they would have all the gold in the whole mountains, ay, that they would, and swore to it; and, if the Spaniard offered to speak a word to them, they would chop his head off, and put a stop to his farther jawing.

However, a little reasoning with them brought some of the men to their senses; and the captain, who was a man of sense and of a smooth tongue, managed so well, that he brought about twenty-two of the men, and the two lieutenants and surgeons, to declare for his opinion, and that they would act better for the future; and, with these, he stepped in between the other fellows, and separated about eighteen of them from their arms, for they had run scattering among the rocks to hunt for gold, and, when they were called to this parley, had not their weapons with them. By this stratagem, he seized eleven of the thieves, and made them prisoners; and then he told the rest, in so many words, that it they would not comply to keep order, and obey the rules they were at first sworn to, and had promised, he would force them to it, for he would deliver them, bound hand and foot, to the Spaniards, and they should do the poor Chilians justice upon them; for that, in short, he would not have the rest murdered for them; upon this, he ordered his men to draw up, to show them he would be as good as his word, when, after some consideration, they submitted.

But the Spaniard had taken a wiser course than this, or, perhaps, they had been all murdered; for he ran to the two Chilian houses which the rogues had plundered, and where, in short, there was a kind of tumult about it, and, with good words, promising to give them as much gold as they lost, and the price of some other things that were taken away, he appeased the people; and so our men were not ruined, as they would certainly have been if the mountaineers had taken the alarm.

After this, they grew a little more governable; but, in short, the sight of the gold, and the easy getting it (for they picked it up in abundance of places), I say, the sight of the gold made them stark mad. For now they were not, as they were before, trafficking for the owners and for the voyage; but as I had promised the gold they got should be their own,

and that they were now working for themselves, there was no getting them to go on, but, in short, they would dwell here; and this was as fatal a humour as the other.

But to bring this part of the voyage to an end, after eight days they came to the hospitable wealthy Chilian's house, whom I mentioned before; and here, as the Spaniard had contrived it, they found all kind of needful stores for provisions laid up, as it were, on purpose; and, in a word, here they were not fed only, but feasted.

Here, again, the captain discovered a cursed conspiracy, which, had it taken effect, would, besides the baseness of the fact, have ended in their total destruction; in short, they had resolved to rob this Chilian, who was so kind to them; but, as I said, one of the lieutenants discovered and detected this villanous contrivance, and quashed it, so as never to let the Spaniard know of it.

But, I say, to end this part, they were one-and-twenty days in this traverse, for they could not go on so easy and so fast, now they were a little army, as we did, who were but six or seven; at length they came to the view of the open country, and, being all encamped at the edge of a descent, the generous Spaniard (and his three servants) took his leave, wishing them a good journey, and so went back, having, the day before, brought them some deer, five or six cows, and some sheep, for their subsisting at their entrance into, and travel through, the plain country.

And now they began to descend towards the plain, but they met with more difficulty here than they expected; for, as I observed that the way for some miles went with an ascent towards the farthest part of the hill; that continued ascent had, by degrees, brought them to a very great, and in some places, impassable descent; so that, however my guide found his way down, when I was through, it was not easy for them to do it, who were so many in number, and encumbered with mules and horses, and with their baggage, so that they knew not what to do; and, if they had not known that our ships were gone away, there had been some odds but, like the Israelites of old, they would have murmured against their leader, and have all gone back to Egypt. In a word, they were at their wits' end, and knew not what course to take for two or three days, trying and essaying to get down here and there, and then frightened with precipices

and rocks, and climbing up to get back again. The whole of the matter was, that they had missed a narrow way, where they should have turned off to the south-east, the marks which our men had made before having not been so regular and exact just there, as in other parts of the way, or some other turning being so very like the same, that they took one for the other; and thus, going straight forward too far before they turned, they came to an opening indeed, and saw the plain country under them, as they had done before, but the descent was not so practicable.

After they had puzzled themselves here, as I said, two or three days, one of the lieutenants, and a man with him, seeing a hut or house of a Chilian at some distance, rode away towards it; but passing into a valley that lay between, he met with a river which he could by no means get over with the mules, so he came back again in despair. The captain then resolved to send back to the honest rich Chilian, who had entertained them so well, for a guide, or to desire him to give them such directions as they might not mistake.

But as the person sent back was one of those who had taken the journal which I mentioned, and was therefore greatly vexed at missing his way in such a manner, so he had his eyes in every corner, and pulled out his pocket-book at every turning, to see how the marks of the places agreed; and at last, the very next morning after he set out, he spied the turning where they should all have gone in, to have come to the place which they were at before; this being so remarkable a discovery, he came back again directly, without going on to the Chilian's house, which was two days' journey farther.

Our men were revived with this discovery, and all agreed to march back; so, having lost about six days in this false step, they got into the right way, and, in four more, came to the descent were I had been before.

Here the hill was still very high, and the passage down was steep and difficult enough; but still it was practicable, and our men could see the marks of cattle having passed there, as if they had gone in drifts or droves; also it was apparent, that, by some help and labour of hands, the way might be led winding and turning on the slope of the hill, so as to make it much easier to get down than it was now.

It cost them no small labour, however, to get down, chiefly

because of the mules, which very often fell down with their loads; and our men said, they believed they could with much more ease have mounted up from the east side to the top than they came from the west side to the bottom.

They encamped one night on the declivity of the hill, but got up early, and were at the bottom and on the plain ground by noon. As soon as they came there they encamped and refreshed themselves, that is to say, went to dinner; but it being very hot there, the cool breezes of the mountains having now left them, they were more inclined to sleep than to eat; so the captain ordered the tent to be set up, and they made the whole day of it, calling a council in the morning to consider what course they should steer, and how they should go on.

Here they came to this resolution, that they should send two men a considerable way up the hill again, to take the strictest observation they could of the plain with the largest glasses they had, and to mark which way the nearest river or water was to be seen; and they should direct their course first to the water, and that, if the course of it lay south, or any way to the east of the south, they would follow on the bank of it, and, as soon as it was large enough to carry them, they would make them some canoes or shallops, or what they could do with the most ease, to carry them on by water; also, they directed them to observe if they could see any cattle feeding at a distance, or the like.

The messengers returned, and brought word that all the way to the east, and so on to south-east, they could discover nothing of water, but that they had seen a great lake, or lough of water, at a great distance, which looked like a sea, and lay from them to the northward of the east, about two points; adding, that they did not know but it might afterwards empty itself to the eastward, and it was their opinion to make the best of their way thither.

Accordingly, the next morning, the whole body decamped, and marched east-north-east, very cheerfully, but found the way much longer than they expected; for though from the mountains the country seemed to lie flat and plain, yet, when they came to measure it by their feet, they found a great many little hills; little, I say, compared to the great mountains, but great to them who were to travel over them in the heat, and with but very indifferent support as to provisions;

so that, in a word, the captain very prudently ordered that they should travel only three hours in the morning and three in the evening, and encamp in the heat of the day, to refresh themselves as well as they could.

The best thing they met with in that part of the country was, that they had plenty of water, for though they were not yet come to any large, considerable river, yet every low piece of ground had a small rill of water in it; and the springs coming out from the rising grounds on the sides of the mountains being innumerable, made many such small brooks.

It cost them six days' travel, with two days' resting between, to advance to that river of water, which, from the height of the mountains, seemed to be but a little way off. They could not march, by their computation, above ten or twelve miles a day, and rest every third day too, for their luggage was heavy, and their mules but few; also some of their mules became tired and jaded by their long march, or fell lame, and were good for nothing.

Besides all this, the days which I call days of rest were really not so to them, for those intervals were employed to range about and hunt for food; and it was for want of that, more than for want of rest, that they halted every third day.

In this exercise they did, however, meet with such success, that they made shift to kill one sort of creature or another every day, sufficient to keep them from famishing; sometimes they met with some deer, other times with the guinacoes, or Peruvian sheep, and sometimes with fowls of several kinds, so that they did pretty well for food. At length, viz., the seventh day, they came to a river, which was at first small, but having received another small river or two from the northern part of the country, it began to seem large enough for their purpose; and, as it ran east-south-east, they concluded it would run into the lake, and that they might fleet down this river, if they could make anything to carry them.

But their first discouragement was, the country was all open, with very little wood, and no trees, or very few to be found large enough to make canoes, or boats of any sort; but the skill of their carpenters, of which they had four, soon conquered this difficulty; for, coming to a low swampy ground on the side of the river, they found a tree something

like a beech, very firm good sort of wood, and yet soft enough to yield to their tools; and they went to work with this, and at first made them some rafts, which they thought might carry them along till the river was bigger.

While this was doing, which took up two or three days, the men straggled up and down; some with their guns to shoot fowls, some with contrivances to catch fish, some one thing, some another; when, on a sudden, one of their fishermen, not in the river, but in a little brook, which afterwards ran into the river, found a little bit of shining stuff among the sand or earth, in the bank, and cried, he had found a piece of gold. Now, it seems, all was not gold that glistened, for the lump had no gold in it, whatever it was; but the word being given out at first, it immediately set all our men a-rummaging the shores of every little rill of water they came at, to see if there was any gold; and they had not looked long till they found several little grains, very small and fine, not only in this brook, but in several others; so they spent their time more cheerfully, because they made some advantage.

All this while they saw no people, nor any signals of any; except one, on the other side of the river, at a great distance, they saw about thirty together, but whether men or women, or how many of each, they could not tell, nor would they come any nearer, only stood and gazed at our people at a distance.

They were now ready to quit their camp and embark, intending to lay all their baggage on the rafts, with three or four siek men, and so the rest to march by the river side, and as many as could, to ride upon the mules; when on a sudden, all their navigation was put to a stop, and their new vessels, such as they were, suffered a wreck.

The case was thus:—They had observed a great many black clouds to hang over the tops of the mountains, and some of them even below the tops, and they did believe it rained among the hills, but, in the plain where they lay, and all about them, it was fair, and the weather fine.

But, in the night, the carpenters and their assistants, who had set up a little tent near the river side, were alarmed with a great roaring noise, as they thought, in the river, though at a distance upwards; presently after, they found the water begin to come into their tent, when, running out, they found

the river was swelling over its banks, and all the low grounds on both sides of them.

To their great satisfaction, it was just break of day, so that they could see enough to make their way from the water, and the land very happily rising a little to the south of the river, they immediately fled thither. Two of them had so much presenee of mind with them, as to pick up their working-tools, at least some of them, and carry off, and the water rising gradually, the other two carpenters ventured back to save the rest, but they were put to some difficulty to get back again with them; in a word, the water rose to such a height that it carried away their tent, and everything that was in it, and which was worse, their rafts (for they had almost finished four large ones) were lifted off from the place where they were framed, which was a kind of a dry dock, and dashed all to pieces, and the timber, such as it was, all carried away. The smaller brooks also swelled in proportion to the large river; so that, in a word, our men lay as it were, surrounded with water, and began to be in a terrible consternation; for, though they lay in a hard dry piece of ground, too high for the land-flood to reach them, yet, had the rains continued in the mountains, they might have lain there till they had been obliged to eat one another, and so there had been an end of our new discovery.

But the weather cleared up among the hills the next day, which heartened them up again; and as the flood rose so soon, so the current being furiously rapid, the waters ran off again as easily as they came on, and in two days the water was all gone again. But our little float was shipwrecked, as I have said, and the carpenters finding how dangerous such great unwieldy rafts would be, resolved to set to it, and build one large float with sides to it, like a punt or ferry-boat. They worked so hard at this, ten of the men always working with them to help, that in five days they had her finished; the only thing they wanted was pitch and tar, to make her upper work keep out the water, and so they made a shift to fetch a juice out of some of the wood they had cut, by help of fire, that answered the end tolerably well.

But that which made this disappointment less afflicting was, that our men hunting about the small streams where this water had come down so furiously, found that there was more gold, and the more for the late flood. This made them

run straggling up the streams, and, as the captain said, he thought once they would run quite back to the mountains again.

But this was his ignorance too; for after awhile, and the nearer they came to the rising of the hills the quantity abated; for where the streams were so furious, the water washed it all away, and carried it down with it, so that by the end of five days, the men found but little, and began to come back again.

But then they discovered that, though there was less in the higher part of the rivers, there was more farther down, and they found it so well worth while, that they went looking along for gold all the way towards the lake, and left their fellows and the boat to come after.

At last, when nothing else would do, hunger called them off, and so once more all the company were got together again; and now they began to load the float, indeed it might be called a luggage-boat; however, it answered very well, and was a great relief to our men; but when they came to load it, they found it would not carry near so much as they had to put in it. Besides that, they would be all obliged to march on foot by shore, which had this particular inconvenience in it, that whenever they came to any small river or brook which ran into the other, as was very often the case, they would be forced to march up a great way to get over it, or unload the great float to make a ferry-boat of it to waft them over.

Upon this they were resolved, that the first place they came at where timber was to be had for building, they would go to work again and make two or three more floats, not so big as the other, that so they might embark themselves, their baggage, and their provisions too, all together, and take the full benefit of the river, where it would afford them help; and not some sail on the water, and some go on foot upon the land, which would be very fatiguing.

Therefore, as soon as they found timber, as I have said, and a convenient place, they went all hands to work to build more floats or boats, and, while this was doing, all the spare men spent their time and pains in searching about for gold in the brooks and small streams, as well those they had been at before as others, and that after they had, as it were, plundered them at the first discovery; for, as they had found some

gold after the hasty rain, they were loath to give it over, though they had been assured there was more to be found in the lake, where they were yet to come, than in the brooks.

All this while their making the floats went slowly on; for the men thought it a great hardship to keep chopping of blocks, as they called it, while their fellows were picking up gold, though they knew they were to have their share of what they found, as much as if they had been all the while with them; but it seems there is a kind of satisfaction in the work of picking up gold, besides the mere gain.

However, at length the gold failing, they began to think of their more immediate work, which was, going forward; and the carpenters having made three more floats, like flat-bottomed barges, which they brought to be able to carry their baggage and themselves too, if they thought fit, they began to embark and fall down the river; but they grew sick of their navigation in a very few days, for before they got to the lake, which was but three days' going, they ran several times on ground, and were obliged to lighten their floats to get them off again, then load again, and lighten again, and so off and on, till they were so tired of them that they would much rather have carried all their baggage, and have travelled by land; and, at last, they were forced to cast off two of them, and put all their baggage on board the other two, which, at best, though large, were but poor crazy things.

At length they came in sight of their beloved lake, and the next day they entered into the open part, or sea of it, which they found was very large, and in some places very deep.

Their floats, or by what other name they might be called, were by no means fit to carry them upon this inland sea; for if the water had been agitated by the least gust of wind, it would presently have washed over them, and have spoiled, if not sunk, their baggage; so they had no way to steer or guide them whenever they came into deep water, where they could not reach the ground with their poles.

This obliged them, as soon as they came into the open lake, to keep close under one shore, that is to say, to the right hand, where the land falling away to the south and the south-by-east, seemed to carry them still forward on their way; the other side widening to the north, made the lake seem there to be really a sea, for they could not look

over it, unless they went on shore and got upon some rising ground.

Here, at first, they found the shore steep too, and a great depth of water close to land, which made them very uneasy; for, if the least gale of wind had disturbed the water, especially blowing from off the lake, they would have been shipwrecked close to the shore. However, after they had gone for two days along the side, by the help of towing and setting as well as they could, they came to a flatter shore and a fair strand, to their great joy and satisfaction.

But, if the shore proved to their satisfaction for its safety, it was much more so on another account; for they had not been long here before they found the sands or shore infinitely rich in gold, beyond all that they had seen, or thought of seeing before. They had no sooner made the discovery, than they resolved to possess themselves of a treasure that was to enrich them all for ever; accordingly, they went to work with such an avaricious spirit, that they seemed to be as if they were plundering an enemy's camp, and that there was an army at hand to drive them from the place; and, as it proved, they were in the right to do so; for, in this gust of their greedy appetite, they considered not where they were, and upon what tender and ticklish terms their navigation stood.

They had, indeed, drawn their two floats to the shore as well as they could, and with pieces of wood like piles, stuck in on every side, brought them to ride easy, but had not taken the least thought about change of weather, though they knew they had neither anchor or cable, nor so much as a rope large enough to fasten them with on the shore.

But they were taught more wit, to their cost, in two or three days; for, the very second night they felt a little unusual rising of the water, as they thought, though without any wind; and the next morning they found the water of the lake was swelled about two feet perpendicular, and that their floats, by that means, lay a great way farther from the shore than they did at first, and the water still increasing.

This made them imagine there was a tide in the lake, and that after a little time it would abate again, but they soon found their mistake; for after some time, they perceived the water, which was perfectly fine and clear before, grew by degrees of a paler colour, thick and whitish, till at last it

was quite white and muddy, as is usual in land floods; and as it still continued rising, so they continued thrusting in their floats farther and farther towards the shore, till they had, in short, lost all the fine golden sands they were at work upon before, and found the lake overflowed the land so far beyond them, that, in short, they seemed to be in the middle of the lake, for they could scarce see to the end of the water, even on that very side where, but a few hours before, their floats were fast on the sands.

It may be easily judged that this put them into great consternation, and they might well conclude that they should be all drowned and lost; for they were now, as it were, in the middle of the sea upon two open floats or rafts, fenced nowhere from the least surge or swell of the water, except by a kind of waste board, about two feet high, built up on the sides, without any calking or pitching, or anything to keep out the water.

They had neither mast or sail, anchor or cable, head or stern, no bows to fence off the waves, or rudder to steer any course, or oars to give any motion to their floats, whose bottoms were flat like a punt, so that they were obliged to thrust them along with such poles as they had, some of which were about eight or ten feet long, which gained them a little way, though very slowly.

All the remedy they had in this case was, to set on with their poles towards the shore, and to observe, by their pocket compasses, which way it lay; and this they laboured hard at, lest they should be lost in the night, and not know which way to go.

Their carpenters, in the mean time, with some spare boards which they had, or rather made, raised their sides as well as they could, to keep off the wash of the sea, if any wind should rise so as to make the water rough; and thus they fenced against every danger as well as they could, though, all put together, they were but in a very sorry condition.

Now they had time to reflect upon their voracious fury, in ranging the shore to pick up gold, without considering where and in what condition they were, and without looking out on shore for a place of safety: nay, they might now have reflected on the madness of venturing out into a lake or inland sea of that vast extent, in such pitiful bottoms as they had under them. Their business, doubtless, had been to

have stopped within the mouth of the river, and found a convenient place to land their goods and secure their lives; and when they had pitched their camp upon any safe high ground, where they might be sure they could neither be overflowed nor surrounded with water, they might have searched the shores of the lake as far as they thought fit; but thus to launch into an unknown water, and in such a condition, as to their vessels, as is described above, was most unaccountably rash and inconsiderate.

Never were a crew of fifty men, all able and experienced sailors, so embarked, nor drawn into such a snare; for they were surrounded with water for three or four miles in breadth on the nearest shore, and this all on a sudden, the country lying low and flat for such a breadth, all which appeared dry land and green, like the fields, the day before; and, without question, the men were sufficiently surprised.

Now they would have given all the gold they had got, which was very considerable too, to have been on shore on the wildest and most barren part of the country, and would have trusted to their own diligence to get food; but here, besides the imminent danger of drowning, they might also be in danger of starving; for had their floats grounded but upon any little hillock, they might have stuck there till they had starved and perished for hunger. Then they were in the utmost anxiety too for fear of wetting their powder, which, if it had happened, they could never have made serviceable again, and without it, they could not have killed anything for food, if they had got to the shore.

They had, in this exigence, some comforts, however, which might a little uphold their spirits; and without which, indeed, their condition must have been deplorable and desperate.

1. It was hot weather, so that as they had no shelter against the cold, if it had come, they had no cold to afflict them; but they rather wanted awnings to keep off the sun, than houses to keep off the cold.

2. The water of the lake was fresh and good; even when it looked white and thick, yet it was very sweet, wholesome, and good tasted; had it been salt water, and they thus in the middle of it, they must have perished with thirst.

3. They being now floating over the drowned lands only, the water was not very deep, so that they could reach ground,

and set along their rafts with their poles, and this, to be sure, they failed not to do with the utmost diligence.

They had also the satisfaction to observe, though it was not without toiling in an inexpressible manner, that they gained upon the shore, and that there was a high land before them, which they were making for, though very slowly, and at a distance they hoped to overcome.

But soon after, they had another discouragement, namely, that they saw the day declining, and night coming on apace, and, in short, that it was impossible they could reach the high land, which they saw by daylight, nor did they know what to do or how to go on in the night.

At length two bold fellows offered themselves to strip and go off, either to wade or swim to the shore, which they had daylight to do, being, as they judged, about three miles, though they found it above four, and from thence to find means to make a fire or light to guide them to the shore in the dark.

This was, indeed, a desperate attempt, but the two fellows being good swimmers, and willing to venture, it was not impracticable. They had light linen drawers on, with pockets, and open at the knees, and their shirts; each of them took a little bottle with some gunpowder, close stopped, with other materials for kindling fire; weapons they had none, but each man a knife and a hatchet fastened round his waist in a little belt, and a light pole in his hands to help him when he waded, which it was expected they must do part of the way. They had no provisions with them, but a bottle with some good brandy in their pockets above mentioned.

When they went off, it was supposed the water to be about four feet to five feet deep, so they chose to swim rather than wade, and it was very seldom much deeper; they had often opportunity to stand on the firm ground to rest themselves.

In this posture they went on directly towards the land, and after they had, by swimming and wading together, advanced about a mile, they found the water grew shallower, which was a signal to them that they should reach the hard ground in a little time; so they walked cheerfully on in about three feet water, for near a mile more.

Their companions on board the rafts soon lost sight of them, for they being in white, and the water white too, and

the light declining, they could not see them at a mile distance.

After this they found the ground falling lower, so that they had deeper water for half a mile more all the way; after which, they came to a flat ground again, for near two miles more, and at length to the dry land, to their great satisfaction, though it was then quite night.

They had been near an hour in the dark, that is to say, with only a dusky light, and began to be greatly at a loss, not being able to see the compass. They had made shift to get over the half mile of deeper water pretty well; for, though it was too deep for the two men to wade, as above, yet they could reach the bottom with their poles, and, at that time, they happened to feel a little breeze of wind fair in their way, which not only refreshed them, but gave them a kind of a jog on their way towards the shore.

At length, to their great joy, they saw a light; and it was the more to their joy, because they saw it just before them, or, as the seamen call it, right ahead; by which they had the satisfaction to know they had not varied their course in the dark. It seems their two men had landed upon a fair rising ground, where they found some low bushes and trees, and where they had good hard dry standing; and they soon found means to pick out a few withered dry sticks, with which they made a blaze for the present, having struck fire with the tools they were furnished with, as mentioned above.

By the light of this blaze, they gave the first notice to their comrades that they were landed; and they in return, as was agreed as before, fired two guns as a signal that they saw it, and were all safe.

By the light of this fire, the two men also gave themselves so much light as to find more dry wood; and, afterwards, their fire was so strong and good, that they made the green wood burn as well as the dry.

Their companions on the floats were now come into the shoal water, in which, as I said, these men waded, but, as their floats did not draw above a foot or eighteen inches water at most, they went on still; but, at length, being within about half a mile of the hillock where the two men were, they found the water so shallow that their floats would not swim. Upon this, more of the men went overboard with poles in their hands, sounding, as we call it, for a deeper

water, and, with long paddling about, they found the ground fall off a little in one place, by which they got their floats about a quarter of a mile farther; but then the water was shallow again, not above a foot of water: so, in a word, they were fain to be content, and, running fast aground, they immediately began, though dark, and themselves very much fatigued, to unload their floats and carry all on shore on their backs.

The first thing they took care to land, was their ammunition, their gunpowder and arms, not forgetting the ammunition de boueche, as the French call it, I mean their victuals; and, with great joy, got to their comrades. Then they fetched their proper materials for their tent, and set it up, and having refreshed themselves, they went all to sleep, as they said, without so much as a sentinel placed for their guard; for, as they saw no inhabitants, so they feared no enemies; and, it may be supposed, they were weary enough to make them want rest, even in the extremest manner.

In the morning they had time enough to reflect upon the madness of such rash adventures. Their floats, indeed, remained as they had left them, and the water was ebbd away from them for more than two miles, that is to say, almost to the deep half mile mentioned above; but they heard a surprising noise and roaring of the water on the lake itself, the body of which was now above seven miles from them.

They could not imagine what this roaring should mean, for they felt no wind, nor could they perceive any clouds at a distance that looked as if they brought any squalls of wind with them, as they are often observed to do; but, when they came nearer the water, they found it had a kind of a swell, and that there was certainly some more violent motion at the farther distance; and, in a little while, looking behind them towards the shore where their comrades were, they found the water began to spread over the flat ground again; upon which, they hastened back, but having a good way to go, they were obliged to wade knee deep before they reached to the hillock where their tent stood.

They had not been many hours on shore before they found the wind began to rise, and the roaring, which before they heard at a distance, grew louder and nearer, till at length the floats were lifted up, and driven on shore by the wind, which increased to a storm, and the water swelled and grew

rough; and, as they were upon the lee shore, the floats were soon broken in pieces, and went some one way and some another.

In the evening it overcast and grew cloudy, and, about midnight, they had their share of a violent rain, which yet, they could see was more violent towards the mountains of the Andes, and towards the course of the river which they came down in the floats.

The consequence of this was, that the third day, the waters of the lake swelled again to a frightful height; that is to say, it would have been frightful to them if they had been up in it, for they supposed it rose about two fathoms perpendicularly, and the wind continuing fresh, the water was all a white foam of froth; so that, had they been favoured with even a good large boat under them, she would scarce have lived there.

Their tent was a sufficient shelter from the rain, and, as they were on dry land, and too high to be reached by any inundation, they had no concern upon them about their safety, but took this for sufficient notice, not to come up the lake again in haste, unless they were better provided with boats to ride out a storm.

Our men began now to think they had taken their leave of the golden lake, and yet they knew not how to think of leaving it so soon. They were now fourteen or fifteen leagues from the shore where they had found so much gold, nor did they know the way to it by land; and as for going by water, that they were unprovided for several ways; besides, the waters kept up to a considerable height, and the winds blew fresh for six or eight days, without intermission.

All these obstructions joined together, put them upon considering of pursuing their march by land, in which, however, they resolved to coast the lake as near as they could to the eastward, till, if possible, they should find that the waters had some outlet, that is to say, that the lake emptied itself by some river towards the sea, as they concluded it certainly must.

They had not yet seen any inhabitants, or any sign of them, at least, not near them; they saw, or fancied they saw, some on the other side of the river, but, as none came within reach of them, it is doubtful whether they really saw them or not.

Before they decamped for a march, it was needful to get some provisions, if possible, and this made them the more

desirous of finding out some conversible creatures, but it was in vain. They killed a wild cow and a deer, and this was all they could get for some time; and with this they set forward, taking their course east, and rather northerly, in order to come into the same latitude they set out in, at their first embarking on the river.

After they had marched thus for about three days, keeping the lake on the north side of them, and always in view, at length, on the third day, in the evening, coming to a little hill, which gave them the prospect of the country for some length north-east, they saw plainly a river issuing out of the lake, and running first east, then bending to the south; it was also easy to perceive that this river, was at that time, much broader than its usual course, for that they could see a great many trees, which probably grew on the banks of the river, standing as it were, in the middle of the water, the banks being overflowed both ways very considerably.

But, as they mounted the hill which they stood on, to greater height, they discovered farther north, at a distance of five or six miles, according to their account, a much larger river, which looked, compared to the first, rather like a sea than a river, which likewise issued out of the lake, and ran east-by-south towards the sea; which river they supposed to be in the same manner swelled with a land-water to a prodigious degree.

This prospect brought them to a more serious consultation as to the measures they should take to proceed on their journey; and as they could easily see there was little or no use to be made of the rivers for their travelling, while they were thus above the ordinary banks, so that they could not know the proper channels, and also that the currents were exceeding swift, so they resolved to stock themselves with provisions, if possible, and continue their journey by land.

To this purpose they first made it their business to catch some more guinacoes, or large sheep, which they knew would not only feed them, but also carry their luggage, which was still heavy and very troublesome to them, and yet absolutely necessary too. But all their endeavour was in vain, for though they saw several, and found that the country was pretty full of them, and some they killed, yet they could not take one alive by any means they could contrive.

Among other creatures they shot for food were a few wild

cows and bulls, and especially on the north side of the river, where they found great plenty.

But the most surprising thing to them that they had yet met with, was still to come. They had descended from the hill where they at first discovered the smaller river, and where they had set up their tent, resolving to march on the lower grounds as near the river as they could, so as to be out of danger of the water, that they might find, if possible, some way over, to come at the great river, which they judged to be the stream most proper for their business.

Here they found a rich pleasant country, level and fruitful, not so low as to be exposed to the overflowing of the river, and not so high as to be dry and barren; several little brooks and streams of water rising on the side of the hill they came from, ran winding this way and that, as if to find out the river, and near the river were some woods of very large trees.

The men, not forgetting the main chance, fell to washing and searching the sand and gravel in these brooks for gold; but the harvest of gold seemed to be over, for here they found none.

They had also an occasion to discover, that till the land-waters were abated, there was no stirring for them, no not so much as to cross the first river; nor if they did, could they find in their hearts to venture, not knowing but the waters might still rise higher, and that the two rivers might swell into one, and so they should be swallowed up, or if not, they might be surrounded in some island, where they should perish for want of provisions; so they resolved to fetch their baggage from the hill as well as they could, and encamp in those pleasant plains, as near the river as they could, till the water should abate.

While they stayed here, they were so far from having hopes that the waters would abate, that it rained violently for almost three days and nights together; and one of those rainy mornings, looking out at their tent-door (for they could not stir abroad for the rain), they were surprised, when looking towards the river, which was just below them, they saw a prodigious number of black creatures in the water, and swimming towards the shore where they were.

They first imagined they were porpoises, or sea-hogs, but could not suggest anything of that kind at such a distance from the sea, when one of the men looking at them through

the glass, cried out they were all black cattle, and that he could perceive their horns and heads; upon this, others looking with their glasses also, said the same; immediately every man ran to his gun, and, notwithstanding it rained hard, away they marched down to the river's side with all the speed they could make.

By that time they reached the river bank, their wonder increased, for they found it was a vast multitude of black cattle, who, finding the waters rise between the two rivers, and, by a natural sagacity, apprehensive of being swept away with the flood, had one and all took the waters, and were swimming over to this side for safety.

It may very well be imagined, the fellows, though they wanted a few such guests as these, yet were terrified with their multitude, and began to consider what course to take when the creatures should come to land, for there was a great number of them. Upon the whole, after a short consultation, for the creatures came on apace, they resolved to get into a low ground, where they perceived they directed their course, and in which there were a great many trees, and that they would all get up into the trees, and so lie ready to shoot among them as they landed.

Accordingly they did so, excepting five of them, who, by cutting down some large boughs of a tree, had got into a little thicket close to the water, and which they so fortified with the boughs of the trees, that they thought themselves secure within; and there they posted themselves, resolving to wait the coming of the cattle, and take their hazard.

When the creatures came to land, it was wonderful to observe how they lowed and roared, as it were to bid one another welcome on shore; and spreading themselves upon the neighbouring plain, immediately lay down, and rolling and stretching themselves, gave our people notice, that, in short, they had swam a great way and were very much tired.

Our fellows soon laid about them, and the five who had fixed themselves in the thicket had the fairest opportunity, for they killed eleven or twelve of them as soon as they set their foot on shore, and lamed as many.

And now they had a trial of skill, for as they killed as many as they knew what to do with, and had their choice of beef, if they killed a bull they let him lie, as having no use

for him, but chose the cows, as what they thought was only fit for eating.

But, I say, now they had a trial of skill, namely, to see if they could maim some of the bulls so as not to kill them, and might bring them to carry their luggage. This was a kind of a fruitless attempt, as we afterwards told them, to make a baggage-horse of a wild bull.

However, they brought it so far to pass, that, having wounded several young bulls very much, after they had run roaring about with the hurt, they lay down and bled so, as that it was likely they would bleed to death, as several of them really did; but the surgeon observing two of them to be low enough that he might go to them, and do what he would with them, he soon stopped the bleeding, and in a word, healed the wounds. All the while they were under cure he caused grass and boughs of trees to be brought to them for food, and in four or five days the creatures were very well; then he caused them to be hampered with ropes, and tied together, so that they could neither fight with their heads, or run away with their heels; and having thus brought them to a place just by their tent, he caused them to be kept so hungry, and almost starved, that, when meat was carried them, they were so tame and thankful, that at last, they would eat out of his hand, and stretch out their heads for it, and when they were let a little looser, would follow him about for a handful of grass, like a dog for a bone.

When he had brought them thus to hand, he, by degrees, loaded them, and taught them to carry; and if they were unruly, as they were at first, he would load them with more than they could well carry, and make them stand under that load two or three hours, and then come himself and bring them meat, and take the load off; and thus in a few days they knew him so well, that they would let him do anything with them.

When our people came to decamp, they tied them both together, with such ropes as they had, and made them carry a very great weight. They tried the same experiment with two more, but they failed; one died, and the other proved untractable, sullen, and outrageous.

The men had now lain here twelve days, having plenty of provision, in which time, the weather proving fair, the land waters ran off, and the rivers came to their old channels.

clear and calm. The men would gladly have gone back to the sands and flat shore of the lake, or to some other part, to look for gold; but that was impracticable now, so they marched on, and in about two days they found the first river seemed to turn so much to the south, that they thought it would carry them too far out of their way, for their orders were to keep about the latitude of 40 to 50°, as is said before, so they resolved to get over the first river as soon as they could; they had not gone far, but they found the river so shallow, that they easily forded it, bulls and all, and, being safely landed, they travelled across the country to the great river, which they found also very low, though not like to be forded as the other was.

Now they thought they were in the way of their business, and here they resolved to see if a tree or two might be found, big enough to make a large canoe to carry them down this river, which, as it seemed large, so the current seemed to be less rapid and furious, the channel being deep and full.

They had not searched long but they found three trees that they thought large enough, and they immediately went to work with them, felled and shaped them, and, in four days' time they had three handsome canoes, one larger than the rest, and able to carry in all fifteen or sixteen men; but these were not enough, so they were forced to look out farther, for two trees more, and this took them up more time. However, in about a week, they launched them all; as for days, they had lost their account of time, so that, as they had sometimes no rule to distinguish one day from another, so at last they quite forgot the days, and knew not a Sunday from a working-day any longer.

While these canoes were making, the men, according to the old trade, fell to rummaging the shores of this river, as they had done the other, for gold, nor did they wholly lose their labour, for, in several places, they found some; and here it was that a certain number of them, taking one of the canoes that were first made, took a voyage of their own heads, not only without command, but against command; and, having made a little mast and sail to it, went up towards the lake, resolving to go quite into the lake to find another golden shore, or gold coast, as they called it.

To give a particular account of this wild undertaking, would be too long, nor would the rogues give much account

of it themselves; only, in short, that they found a sand pretty rich in gold, worked upon it five days indefatigably, and got a sufficient quantity, had they brought it back, to have tempted the rest to have gone all away to the same place. But, at the end of five days, some were for returning and others for staying longer, till the majority prevailed to come back, representing to the rest, that their friends would be gone, and they should be left to starve in that wild country, and should never get home; so they all got into the canoe again, but quarrelled when they were in, and that to such an unreasonable height, that, in short, they fought, upset the boat, lost all their gold and their arms, except three muskets which were lashed under their thouts, or benches of the canoe, spoiled their ammunition and provisions, and drowned one of their company, so they came home to the rest mortified, wet, and almost famished.

This was a balk to them, and put a damp to their new projects; and yet six of the same men were so bold afterwards as to demand to be dismissed, and a canoe given them, and they would go back they said to the golden lake, where, they did not doubt, they should load the canoe with gold; and, if they found when they came back we were gone, they would find their way back through the mountains, and go to the rich Spaniard, who, they did not doubt, would get them license to go back to Europe with the galleons, and perhaps, they said, they might be in England before us.

But the captain quelled this mutiny, though there were four or five more came into it. By showing them the agreement they had made with me, their commander, the obligation they were under, and the madness of their other proposal, he prevailed with them to go forward with the rest, and pursue the voyage, which he now represented to be very easy, being as it were, all the way downhill, that is to say, with the stream, for they all knew the river they were in must go to the sea, and that in or near the latitude which they knew the ship had appointed to wait for them.

However, to soften them a little, and in some measure to please them, he promised, that if they met with any success in the search after gold in the river they were in, as he did not question but they should, he would consent to any reasonable stop that they should propose, not exceeding five

days in a place, and the places to be not less than five leagues off from one another.

Upon these terms they consented, and all embarked and came away, though extremely mortified for the loss of one of their companions, who was a brave stout fellow, very well beloved by all the company, but there was no remedy; so they came on in five canoes, and with a good stock of provisions, such as it was, viz., good fresh beef cured in the sun, and fifteen Peruvian sheep alive; for, when they got into the country between the two rivers, they found it easy to catch those creatures, who before that would not come near them.

And now they came down the river apace, till they came to another golden shore, where, finding some quantity of gold, they claimed their captain's promise, and, accordingly, they went all on shore to work, and pretty good success they had, picking up from among the sands a considerable quantity of gold, and, having stayed four of the five days, they found that they had cleared the place, which was not of a long extent, and so they cheerfully came on.

They proceeded now for eleven days together very willingly, but then found the channel of the river divided itself, and one went away to the left, and the other to the right. They could not judge which was the best to take; but not questioning but that they would meet again soon, they took the southernmost channel, as being most direct in their latitude; and thus they coursed for three or four days more, when they were obliged to put into the mouth of a little river that fell into the other, and made a good harbour for their little fleet.

Here, I say, they were obliged to put in for want of provisions, for they had eaten up all their guinacoes, and their two tame bulls too, the last of which they soon repented, as will be shown presently.

After they had been a-hunting, and shot a couple of deer and a cow, with a kind of hare, as large as an English fox, they set forward again very merry, and the more, because they had another little piece of a gold coast, where, for two days, they had very good luck again; but judge how they were surprised, and in what a consternation they were, when, coming farther down the same river, they heard a terrible noise in the river, as of a mighty cataract, or waterfall, which increased as they came forward, till it grew so loud that

they could not hear themselves speak, much less hear one another.

As they approached, it was the more frightful; so at length, lest they should be hurried into it before they were aware, they went all on shore, doing all by signs and dumb postures, for it was impossible to hear any sound but that of the cataract.

Though the noise was so great, it was near six miles to the place from whence it came, which, when they perceived, some of them went back to bring on the boats, and so brought them as near the place as they durst, and ran them on shore into a little hollow part of the bank, just large enough to hold them. When they had thus secured the boats, they went to view the waterfall; but how were they astonished, when they found that there were no less than five waterfalls, at the distance of about two miles from each other, some more, some less, and that the water fell from a prodigious height; so that it was impossible for any boat to launch down the cataract without being dashed in pieces.

The men now saw there was no remedy but that they must lose the benefit of their five canoes, which had been so comfortable to them, and by which they had come above four hundred miles in a little time, with safety and pleasure.

These cataracts made the river perfectly useless to them for above twenty miles, and it was impossible to drag their canoes that length over land; so, in short, they unloaded them, and, for their own satisfaction, they turned one, the biggest of them, adrift, and let it go to the first cataract, placing themselves so beyond that they might see it come down, which they did, and had the vexation of seeing it dashed all to pieces on the rocks below.

As there was no remedy, they plainly saw they must leave their boats behind them. And now, as I have said, they had time to repent killing their two tamed bulls, who would have done them good service; but it was too late to look back upon what was done and over so many days before. They had now no means left them, if they would go forward, but to take their baggage upon their shoulders and travel on foot. The only help they had was, that they had got five guinacoes left, which, though they were hungry, and would fain have eaten, yet, as they had carried at least five hundred weight of their luggage, they chose to fast and walk rather

than feast and work ; so they went on as well as they could till they got past these falls, which, though not above twenty miles, cost them five days' labour ; at the end of which, they encamped again to refresh themselves, and consider of what was next to be done. They were thus long upon this short journey for many reasons.

1. Because they were obliged to employ the best part of two days in hunting for their food, in which time, five of them swimming over the river to shoot at some black cattle, extremely fatigued themselves in pursuing them, but did, however, shoot five cows and bulls ; but then it was at such a distance, that it was more pains to drag the flesh along to the river's side than it was worth, only that they were indeed hunger-starved, and must have it.

2. They found still some little quantity of gold in the water, that is to say, below the falls, where the water, by falling with great force, had made a pit or hole of a vast depth, and had thrown up a shoal again, at perhaps a little distance, where they took up some gold whenever the water was low enough to come at it.

3. The weight of their baggage made them travel heavy, and seldom above five or six miles a day.

Being now come to the open river, they thought of building more floats ; but they were discouraged from this consideration by not knowing but in a few days' march there might be more waterfalls, and then all their labour would be lost ; so they took up their tent and began to travel again.

But here, as they kept the river close on board, as the seamen call it, they were at a full stop, by the coming in of another river from the south-west, which, when it joined the river they were along by, was above a quarter of a mile broad, and how to get over it they knew not.

They sent two men up the additional river some length, and they brought word that it was indeed narrower by much, but nowhere fordable, but deep and rapid.

At the same time they sent two more nimble fellows down the coast of the great river, to see if there were any more waterfalls, who brought them word that there were none for upwards of sixty miles.

While they lay here, at the point of the influx, expecting the return of their scouts, they used what diligence they could in getting provisions ; and among the rest, they killed three

cows and a bull on the other side of the largest river; but not knowing how to bring them over, they at last concluded to go, as many as could swim, which was the better half of them, and sit down by it, and roast and broil upon the spot as much as they could eat, and then bring with them as much as they could for their companions.

For this purpose they got boughs of trees, and bound them together, then wrapped the meat in the hides, and laid it on the wood, and made a number of little contrivances to convey it, so that no part of the meat was lost. What they got on their own side of the river they made better shift with.

On the return of their scouts they found there was no remedy but to build some new vessels, of one kind or other, to take in their baggage and provision, which they made after the manner of their first floats; for they found no trees large enough to make canoes; when, therefore, they had made one great float, they resolved to make two small boats, like yawls or skiffs, with which they might tow their large float or barge; and as this they might do with small timbers, so they found means to line them within and without with the bulls' hides, and that so dexterously joined, and lapped and rolled one over another, that no water came through, or but very little.

With these two boats they ferried over the small rivers with ease, each boat carrying six men, besides two to row; and when they were over the small rivers, the two boats served to tow their great punt or barge close by the shore.

The greatest difficulty was for tow-lines to draw the boats by, and those they supplied by twisting a strong tough kind of flag or rush, which they found in the river, of which, with much application and labour, they made a kind of rope-yarn, and then twisting it again, made it very strong.

This was the voiture with which they conveyed themselves quite down to the sea, and one of these boats it was that we spied, as above, coming to us in the bay.

They had yet above four hundred and fifty miles to the sea, nor could they at any time tell or guess how far off it might be. They went on more or less every day, but it was but slowly, and not without great labour, both of rowing and towing. Their provisions also cost them much pains, for they were obliged first to hunt and kill it, and then bring

it to the camp, which, however, was always close to the river's side.

After they had travelled thus some time, following the course of the river, they came to a place, where, on a sudden, they could see no farther bank of the river, but it looked all water, like the sea. This they could not account for; so, the next day, they rowed towards it with one of their little boats, when they were surprised to find that it was the northern branch of the river, which they had seen go off before they came at the waterfalls, which river being now increased with many other great waters, was now so great, that the mouth of it might be said to be four or five miles over, and rather received the river they were on, than ran into that; but, after this, it contracted itself again, though still it was to be supposed near a mile and a half over.

They were far from being pleased at this conjunction of the waters, because the great water being thus joined, they found the stream or current more violent, and the water, upon the least stirring of the wind, more turbulent than it was before, and as their great float drew but little water, and swam flat upon the surface, she was ready to founder upon every occasion. This obliged them almost every night to seek for some little cove or creek to run her into, as into a harbour, to preserve her; for, when the wind blew from shore, they had enough to do to keep her from driving off from the river, and, when there was but little wind, yet it made a rippling or chopping of the waves, that they had much difficulty to keep them from filling her.

All the country on the side of this river was a little higher ground than ordinary, which was its security from land-floods, and their security too; for sometimes the river was seen to rise, and that so much as to overflow a great extent of land on the other side. Hence, perhaps, the other side might be esteemed the most fruitful, and perhaps might be the better land, if it had but half the art and industry of an European nation to assist the natural fertility of the soil, by keeping the water in its bounds, banking and fencing the meadows from the inundations and freshes, which were frequently sent down from the Andes and from the country adjoining.

But, as it now was, those lower lands lay great part of the year under water; whether it was the better or worse for the soil, that no judgment can be made of, till some

people come to settle there to whom it may be worth while to make experiments of that kind.

This part of the country they were now in resembled, as they hinted, the county of Dorsetshire and the downs about Salisbury, only not lying so high from the surface of the water, and the soil being a good fruitful dark mould, not a chalky solid rock, as in the country about Salisbury, and some other parts.

Here they found a greater quantity of deer than they had seen in all their journey, which they often had the good luck to kill for their supply of food, the creatures not being so shy and wild as they had found farther within the country.

It may be noted here, and it is very observable, that in all this journey I could not learn that they saw either wolf or fox, bear or lion, or, indeed, any other ravenous creature, which they had the least reason to be shy or afraid of, or which, indeed, were frightful to the deer; and this, perhaps, may be the reason why the number of the latter animals is so great, which, as I have said, is greater there than at other places.

After they had feasted themselves here for some days, they resolved to begin their new kind of navigation, and to see what they could make of it; but they went very heavily along, and every now and then, as I have said, the water was too rough for them, and they were fain to put into harbour, and sometimes lie there two or three days. However, they plying their time as well as they could, and sometimes the current setting over to their side, and running strong by the shore, they would go at a great rate, insomuch that one time they said they went about thirty miles in a day, having, besides the current, a little gale of wind right astern.

They reckoned that they went near two hundred miles in this manner, for they made the best of it; and at the end of these two hundred miles, it was, by their reckoning, that our five men who travelled into the country so far, found them, when they saw the hat swimming down the stream; which hat, it seems, one of them let fall overboard in the night.

They had, I say, travelled thus far with great difficulty, the river being so large; but, as they observed it growing larger and larger the farther they went, so, they said, they did not doubt, but that, in a little more, they should come to the sea.

They also observed, that now, as they found the waters larger and the rivers wider, they killed more fowls than formerly, and, particularly, more of the duck-foot kind, though they could not perceive any sea-fowls, or such as they had been used to. They saw a great many wild swans, and some geese, as also duck, mallard, and teal; and these, I say, increased as they drew nearer the sea.

They could give very little account of the fish which the rivers produced, though they sometimes caught a few in the smaller river; but, as they had neither fishing-hook or nets, which was the only omission in my fitting them out, they had no opportunity to furnish themselves.

They had, likewise, no salt, neither was it possible to furnish them with any, so they cured their meat in the sun, and seasoned it with that excellent sauce called hunger.

The account they gave of discovering our five men was thus. They had been, for two days, pretty successful in their navigation, as I have described it, but were obliged to stop, and put in at the mouth of a little river, which made them a good harbour. The reason of their stay was, they had no victuals, so by consent they all went a-hunting, and, at night, having shot two guinacoes and a deer, they went to supper together in their great tent; and, having fed heartily on such good provisions, they began to be merry, and the captain and officers, having a little store left, though not much, they pulled out their bottles, and drank every one a dram to their good voyage, and to the merry meeting of their ships, and gave every man the same.

But their mirth was increased beyond expressing, when two of the men, who were without the tent door, cried out, it lightened. One said he saw the flash, he was sure, and the other said, he thought he saw it too; but, as it happened, their backs were towards the east, so that they did not see the occasion.

This lightning was certainly the first flash of one of our five men's rockets, or the breaking of it, and the stars that were at the end of it, up in the air.

When the captain heard the men say it lightened, he jumped from his seat, and called aloud to them to tell which way; but they foolishly replied, to the north-west, which was the way their faces were when they saw it; but the word was no sooner spoken but the two fellows fell a-hal-

looming and roaring, as if they were distracted, and said they saw a rocket rise up in the air to the eastward.

So nimble were the men at this word, that they were all out of the tent in a moment, and saw the last flash of the rocket with the stars, which, spreading themselves in the air, shone with the usual bright light that it is known those fireworks give.

This made them all set up a shout of joy, as if they imagined their fellows, who were yet many miles from them, should hear them; but the captain and officers, who knew what they were to do on this occasion, ran to their baggage, and took out their own rockets, and other materials, and prepared to answer the signal.

They were on a low ground, but, at less than a mile distant, the land went ascending up to a round crown or knoll, pretty high; away they ran thither, and set up a frame in an instant. But, as they were making these preparations, behold, to confirm their news, they saw a third rocket rise up in the air, in the same place as before.

It was near an hour from the first flash, as they called it, before they could get all things ready; but then they fired two rockets from the adjoining hill, soon after one another, and, after that, at about ten minutes' distance of time, a third, which was just as by agreement, and was perfectly understood, the rockets performing extremely well.

Upon this they saw another single rocket rise up, which was to let them know that their former was seen and understood.

This was, you will conclude, a very joyful night, and the next morning they went all hands to work at the boats, getting out of the creek early, and made the best of their way. However, with all they could do, they could not go above twelve miles that day, for the current setting over to the other shore, had left them, and in some places, they would rather have an eddy stream against them, and this discouraged them a little, but, depending that they were near their port, and that their friends were not far off, they were very cheerful. At night they looked out again for rockets, the sight of which failed not to rejoice their hearts again, and with this addition, that it appeared their friends were not above four or five miles off; they answered the rockets punctually, and proceeding early the

next day, they met in the morning joyfully enough, as has been said.

We were overjoyed at meeting, as may be easily conceived; but, to see the pitiful boat, or periagua, they came on board in, a little surprised us; for, indeed, it was a wonder they should be able to make it swim under them, especially when they came out into the open sea.

As soon as we had the boat in reach, we hauled it up into the ship for a relic, and, taking two of the men with us, we manned out all our ship's boats to go and fetch the rest, for they were, as these men told us, about seventeen miles up the river still, and could not come any farther, their boats being not able to bring them along, and the river growing very broad and dangerous. The eldest of my midshipmen came in this first boat, but the captain and the other stayed with the men, who were very unruly, and frequently quarrelling and wrangling about their wealth, which, indeed, was very considerable; but they were above twice as far up the river as the men told us, having halted after the boat left them.

When our boats came to them, and took them in, I ordered they should be set on shore, and their tents put up there, till I had settled matters a little with them, having had an account how mutinous and fractious they had been; and I made them all stay there till I had fully adjusted everything with them about their treasure, which, indeed, was so much, that they scarce knew how to govern themselves under the thought of it.

Here I proposed conditions to them at first, that all the gold should be shared before they went on board, and that it should be put on board the ship, as goods for every man's single account; that I would give them bills of lading for it; and I offered to swear to them to deliver it into every man's possession, separately, at the first port we should come to an anchor at in England or France; and that, at that said port, they should every man have the 100%. I had promised them, as above, for the undertaking this journey, delivered to them in gold dust, to that amount, and that they, alone, should have full liberty to go on shore with it, and go whither they would, no man whatever but themselves being allowed to set foot on shore in the same place, distress excepted. This they insisted on, because they had done some things,

they said, which, if I would, I might bring some of them to the gallows. However, I promised to forgive them, and to inquire no more after it.

In a word, there had been a scuffle among them, in which one of their canoes was upset, as was said, and one of their number drowned, at the same time when they lost a great part of their gold; and some were thought to have done it maliciously too.

But, as I had no occasion to trouble them on that score, not having been upon the spot when it was done, so, having made this capitulation with them, I performed it punctually, and set them all on shore, with their wealth, in the river of Garonne, in France; their own gold, their 100*l.*'s worth reward for their journey, their wages, and their share of pearl, and other advantages, made them very rich; for their cargo, when cast up on shore, amounted to about 400*l.* a man. How they disposed of themselves, or their money, I never gave myself the trouble to inquire, and if I had, it is none of my business to give an account of it here.

We dismissed also near fourscore more of our men afterwards, in a little creek, which was at their own request; for most of them having been of the Madagascar men, and, by consequence, pirates, they were willing to be easy, and I was as willing to make them so, and therefore cleared with as many of them as desired it. But I return to our ship.

Having thus made a long capitulation with our travellers, I took them all on board, and had leisure enough to have a long narration from them of their voyage; and from which account, I take the liberty to recommend that part of America as the best and most advantageous part of the whole globe for an English colony, the climate, the soil, and, above all, the easy communication with the mountains of Chili, recommending it beyond any place that I ever saw or read of, as I shall farther make appear by itself.

We had nothing now to do, but to make the best of our way for England; and setting sail from the mouth of the river Camerones, so the Spaniards call it, the 18th of January, in which we had a more difficult and unpleasant voyage than in any other part of our way, chiefly because, being a rich ship, and not knowing how affairs stood in Europe, I kept to the northward as far as the banks of Newfoundland, steering thence to the coast of Galicia, where we touched as

above; after which, we went through the Channel, and arrived safe in Dunkirk road the 12th of April; and from thence gave private notice of our good fortune to our merchants and owners; two of whom came over to us, and received at our hands such a treasure as gave them reason to be very well satisfied with their engagement. But, to my great grief, my particular friend, the merchant who put us upon this adventure, and who was the principal means of our making the discoveries that have been here mentioned and described, was dead before our return; which, if it had not happened, this new scheme of a trade round the world had, perhaps, not been made public till it had been put in practice by a set of merchants designed to be concerned in it from the New Austrian Netherlands.

THE END OF THE NEW VOYAGE ROUND THE WORLD.

A SEASONABLE
WARNING AND CAUTION

AGAINST THE
INSINUATIONS OF PAPISTS AND JACOBITES
IN FAVOUR OF THE PRETENDER.

WHY now now, England! what ailest thee now? What evil spirit now possesseth thee! O thou nation famous for espousing religion, and defending liberty; eminent in all ages for pulling down tyrants,* and adhering steadily to the fundamentals of thy own constitution: † that has not only secured thy own rights, and handed them down unimpaired to every succeeding age, but has been the sanctuary of other oppressed nations; ‡ the strong protector of injured subjects against the lawless invasion of oppressing tyrants.

To thee the oppressed protestants of France owed, for some ages ago, the comfort of being powerfully supported, while their own king, § wheedled by the lustre of a crown, became apostate, and laid the foundation of their ruin among themselves; in thee their posterity || find a refuge, and flourish in thy wealth and trade, when religion and liberty find no more place in their own country.

* Edward II., Richard II., Richard III., James II.

† In the several barons' wars in the reign of King Stephen, King John, &c.

‡ Especially of the persecuted protestants in the Low Countries, in Queen Elizabeth.

§ Henry IV., who turned papist, and with much difficulty granted liberty to his protestant subjects by the edict of Nantes.

|| The French refugees, who being received here, are grown rich and wealthy by our trade.

To thee the distressed Belgii* owe the powerful assistance by which they took up arms in defence of liberty and religion, against Spanish cruelty, the perfidious tyranny of their kings, and the rage of the bloody Duke d'Alva.

From thee the confederate Hollanders† received encouragement to join in that indissoluble union which has since reduced the invincible power of the Spaniards, and from whence has been raised the most flourishing commonwealth in the world.

By thy assistance they are become the bulwark of the protestant religion, and of the liberties of Europe; and have many times since gratefully employed that force in thy behalf; and, by their help, thou, who first gavest them liberty, hast more than once rescued and preserved thy own.

To thee the present protestant nations‡ of Europe owe their being at this day freed from the just apprehensions of the growing greatness of France; and to thy power, when acting by the glorious protector of thy liberty, King William, is the whole Christian world indebted for depriving the French tyrant of the hopes and prospect of universal monarchy.

To thy blood, thy treasure, the conduct of thy generals, and the vigour of thy councils, are due, the glory, the fame, the praises, and the advantages of twenty years' war, for the establishing and restoring the liberty and religion of Europe.

When posterity shall inquire into the particulars of this long and bloody war; the battles, sieges, and stupendous marches of armies, which, as well with loss as with victory, have been the subject of thy history; it will for ever be frequent in their mouths; HERE the British troops, fighting with dreadful fury, and their usual constancy, shed their blood in defence of the protestant cause, and left a bloody victory to God's enemies and their own; as at Steenkirk, Landen, Camaret, Almanza, Brihenga, and the like: or, HERE the British troops, with their usual valour, carried all before

* The Flemings, when threatened with the inquisition from Spain, under the reign of Philip II.

† Under William Henry, the first Prince of Orange, who formed the revolt of the Dutch provinces, and laid the foundation of the States General and their commonwealth.

‡ The circles of Swabia and Franconia, the Palatinate, and the countries of Hussia, Wirtemberg, and others.

them, and conquered in behalf of the protestant interest, and Europe's liberties; as at Blenheim, Ramilies, Barcelona, Oudenard, Sarragossa, Blaregnies, &c. Here the British navies triumphed over French greatness; as at Cherburgh, La Hogue, Gibraltar, &c. There their land forces reduced the most inapregnable fortresses; as at Namur, Lisle, Menin, Tournay, &c.

And wherefore has all this English and British blood been spilt? Wherefore thy nation exhausted; thy trade sunk and interrupted; thy veins opened? Why hast thou struggled thus long, and with so much vigour, as well with French tyranny abroad, as popish factions at home, but to preserve entire the religion and liberties of Europe, and particularly of this nation, and to preserve our posterity from slavery and idolatry? Principles truly noble, worthy a nation's blood to protect, and worthy a nation's treasure to save.

But what has all this been for? And to what intent and purpose was all this zeal, if you will sink under the ruin of the very fabric ye have pulled down? If ye will give up the cause after ye have gained the advantage, and yield yourselves up after you have been delivered; to what purpose then has all this been done? Why all the money expended? Why all this blood spilt? To what end is France said to be reduced, and peace now concluded, if the same popery, the same tyranny, the same arbitrary methods of government shall be received among you again? Sure your posterity will stand amazed to consider how lavish this age has been of their money, and their blood, and to how little purpose; since no age since the creation of the world can show us a time when ever any nation spent so much blood and treasure to end just where they begun: as, if the hearts of our enemies prevail, we are like to do.

Let us reason a little together on these things, and let us inquire a little, why, and for what reason Britain, so lately the glory of Europe; so lately the terror of France, the bulwark of religion, and the destroyer of popery, should be brought to be the gazing-stock of the world? And why is it that her neighbours expect every hour to hear that she is going back to Egypt, and having given up her liberty, has made it her own choice to submit to the stripes of her task masters, and make bricks without straw.

We that are Englishmen, and live from home among the

protestants of other nations, cannot but be sensible of this alteration, and we bear the reproaches of those who speak freely of the unhappy change which appears in the temper of our countrymen at home. It is astonishing to all the world to hear that the common people of England should be turned from the most rivetted aversions, to a coldness and indifferency in matters of popery and the pretender: that they, who with so unanimous a resolution deposed the late King James, as well for his invasions of their liberty as of their religion; and who with such marks of contempt drove him and his pretended progeny out of the nation, should without any visible alteration of circumstances, be drawn in to favour the return of that race with all the certain additions of popish principles in religion; French principles in government; revenge for family injuries; restoration of abdicated and impoverished votaries; and the certain support of a party at home, whose fortunes and losses must be restored and repaired out of the ruins of their country's liberties.

To what purpose was the revolution? Why did you mock yourselves at so vast an expense? Why did you cry in your oppressions to God and the Prince of Orange to deliver you? Why did you rise as one man against King James and his popish adherents? Why was your fury so great, and your opposition so universal, that although he had a good army of veteran, disciplined troops, and a powerful assistance from France ready to fall in and join him, yet they durst not, when put all together, venture to look you in the face, but fled like darkness before the sun, like guilt before the sword of justice; or as a murderer from the avenger of blood? Was it all, that you might the better weaken yourselves by ages of war, and they might return again, and bind you like Samson, when your strength was departed?

When this was done, why did ye mock God with a thanksgiving,* and banter the world with your pretended praises to heaven for your deliverance? Why, when you appeared by your representatives in convention and in parliament, did you make so many fast days,† and days of prayer for the success of the arms you took up, and the war you carried on for the

* The Thanksgiving for the Revolution.

† Monthly fasts appointed the first Wednesday of every month during the war in King William's time.

finishing and securing this great work, called the pulling down of popery? Was it all, that after having spent twenty years of war, and a sea of blood, ruined trade, exhausted your treasure, and entailed vast debts on your posterity; you should calmly open your doors to the fugitives you had found out, and let in again the popish tyranny you had driven away?

For what reason was it that you presented the crown to your benefactor, called him your deliverer, and made him your king; and having done so, maintained him upon the throne with so much vigour, fought under his banner in so many battles, and with so great animosity, and professed to stand by him against all his enemies at home and abroad? Why is he in so many addresses* styled the rescuer of this nation from popery and slavery? Why in so many acts of parliament† is he called the great deliver of the nation? Why in so many sermons preached to men, and prayers put up to God, has he the title of “the instrument blessed by heaven to free these nations from popery and arbitrary government?” Was all this done, that your posterity being brought back into the bondage their fathers were delivered from, should with the same alacrity call him an invader, an usurper, a parricide, and their fathers, rebels and revoltors.

Why was the crown entailed by so many provisoes, reserves, and limitations? Why the names of every person that should succeed, so expressly and particularly mentioned and set down?‡ Why so many acts of parliament§ to secure that entail, and punish with death those who should reject or oppose it? Why was the settlement of the crown thought to be of so much consequence to the public good, that the two daughters of King James, the late blessed Queen Mary, and her present royal majesty, thought themselves bound to agree to the same for the safety and peace of their country, though it was in prejudice of the right and possession of

* Vid. The Collection of Addresses in King William's reign.

† Act for Offering the Crown; The Claim of Right; Act for Security of his Majesty's Person and Government, &c.

their own father? Was it all, that the return of these things might be made upon the people with the greater weight, and that posterity might be prejudiced against the memory of the two royal sisters, as necessary to the ruin of their own father?

Why was King James and his popish posterity entirely excluded for ever from enjoying the imperial crown of these realms? * Why were so many acts of parliament made to extinguish the hopes of his race, and of their party, and for farther security of her majesty's person and government? Why was the settlement of the succession in a protestant line made the principal reason of uniting the two kingdoms together? And why was that union so vigorously opposed by all those that adhered to the jacobite interest? Was this to illustrate the return of the abdicated line, and by the greatness of the nation's endeavour for keeping out the pretender, to justify his using them accordingly when he comes in?

Why was the union declared to be unalterable, and, as some say, the power thereby taken out of the hands of the British parliament to change the settlement of the crown, or to name any other persons than those of the illustrious house of Hanover to succeed; and, above all, why was that severest of all oaths, the abjuration, contrived; by which it is rendered impossible for this nation, upon any pretence whatsoever, to receive the pretender but with the black stigma of an abominable perjury? Was this that, with the greater reverence to laws, and the greater regard to the solemnity of a national oath, we might all turn tail upon our principles, and in defiance of God and the laws, bow our knees to an abjured pretender?

For God's sake, Britons, what are you doing? And whither are you going? To what dreadful precipices are ye hurrying yourselves? What! are you selling yourselves for slaves to the French, who you have conquered; to popery, which you have reformed from; and to the pretender, whom you have forsworn? Is this acting like Britons; like protestants, like lovers of liberty? Nay, is it acting like men of reasonable souls, and men who have the light of common sense to act by?

* Vid. The Act of Parliament for settling the Succession of the Crown on the illustrious House of Hanover.

That we may move you, then, to consider a little the grossness and absurdity of what you are doing, dear countrymen, be prevailed upon to debate a little with yourselves the state of your own case, which I shall briefly and plainly lay before you, thus :—

The government having thought fit, for reasons of state which I have no room to speak of in this place, to separate from the confederates, as well in the field as in treating with the French, and unhappily, I doubt, to make a separate peace ; among the several improvements made of this by the enemies of Britain, this is one, viz., to encourage and increase the friends and interest of the pretender, and this they do upon several foundations. 1. Upon a supposition, or suggestion rather, that the ministry, because they have not thought fit to carry on the war, are therefore coming so entirely into the interest of France, that they must of necessity comply with the French king's demand of restoring the pretender. 2. Upon a like ill-grounded suggestion that the people of England and Scotland are more inclined to receive the pretender than they were formerly ; in both which suppositions they grossly impose upon you, and yet by both they subtly carry on their crafty designs to delude the more ignorant part of the people of this nation, and to prepare them, as they think, for the coming of the pretender : as appears thus :—

1. By persuading the common people that the ministry are for the pretender, they, as far as in them lies, make a breach, a misunderstanding, and lay a foundation of jealousy and distrust between the people and the government, enraging all those who are zealous for the Hanover succession, against the ministers of state, and so increasing the dangerous divisions that are among us, the closing and healing whereof is so much the duty and interest of all faithful subjects, that they may the more unanimously and sincerely join together against the pretender and all his adherents.

2. They intimidate those great numbers of people who, not so much acting by principle as example, are unwilling to show themselves in any cause which they have reason to fear is declining, and therefore act with the less zeal for the true interest, by how much they see, or think they see, the great ones of the nation fall off from it.

3. By suggesting that the common people of Great Britain

are more inclined to the pretender than they were formerly, they think they bring them really to be so, and encourage all the endeavours of those who labour indefatigably all over the nation to have it so.

To undeceive the good people of Britain, therefore, in these things, dear countrymen, I beseech you to consider,

1. That whatever we may dislike of the proceedings of the ministry, and of the government, of which this is not the place to speak, there is no greater cheat can be put upon you than this is; for, whatever the jacobite party may promise themselves from the ministry, the ministry do not yet own their measures to tend that way; they do not act avowedly for the pretender; they do all things yet upon the supposition of the protestant succession, and carry it as in the interest of the house of Hanover; and to say they are for the pretender, is to charge them with the greatest treachery and hypocrisy, and is such an insolence in the jacobites, as the ministry ought to show their resentment at them for, and we hope they will do so; besides, there is a manifest difference between the fears of honest men, as that the measures of the ministry may encourage the friends of the pretender; and on the other hand, the insolent way of the jacobites claiming the ministry to be acting in their behalf; while therefore the ministry appear to act under the scheme of the Hanover succession, whether they are sincere or no, it is a good answer to a jacobite, whatever it is to another, to say, it is an unjustifiable assurance, and an affront to the government, to boast of the ministry being in the interest of the pretender.

It is also well worthy the consideration of the good people of Britain, that at the same time these men would have you believe that the ministers of state are bringing in the pretender, they would also have the ministers of state made believe, that the generality of the people are inclined to receive the pretender; by which double-faced fraud they endeavour to restrain you, the people of Britain, from appearing against the pretender, for fear of offending the government; and to restrain the said government in the same case, for fear of the people.

As they go on in these things with too much success, it is a very sad consideration to all true British protestants to find that a party of men among us, who yet call themselves pro-

testants, fall in with them in many things, fomenting the divisions and breaches that are among us, weakening the constitution, and pursuing such principles as tend to destroy our liberties; by whose arts, and by the subtle management of which party, the revolution wears every day more and more out of date; the principles of liberty decay; the memory of King William sinks in our esteem; the heroic actions of that prince, which were once the just admiration of all the honest people of Great Britain, begin to be lost upon us, and forgotten among us, and to become as a mark of infamy to the nation!

Every considering protestant cannot but observe with horror, what swarms of popish priests from abroad, and jacobite emissaries at home, are spread about among us, and busily employed to carry on these wicked designs; how in disguise they run up and down the countries, mingling themselves in all companies, and in coffee-houses, and private conversation, endeavouring to insinuate with all possible subtlety, favourable notions of the pretender into the minds of the people, thereby to pave the way, and to prepare you for receiving him; such as, that he is the lawful son of King James; that he is a protestant in his heart; that he will abjure the errors of popery as soon as he has an opportunity; that the late King William promised to prove him a bastard, but never could do it; that it is hard to reject him for what was none of his own fault, and the like.

Although thinking men can and do see through these things, yet, as they are calculated and prepared to deceive the ignorant people in the country, it is earnestly desired of those who have their eyes open to the said popish delusions, that they would endeavour to undeceive their brethren and neighbours, and earnestly persuade them not to be imposed upon by the jesuitical insinuations of the popish faction, furnishing the poor honest people with just reasons for their adhering to the protestant settlement, and full answers to those who go about to deceive them: which answers are such as follow:—

1. It seems absolutely necessary to remind them of the reason of the late revolution; how King James II., by his popish counsellors, priests, and jesuits, had laid the foundation of overwhelming all our liberties, in an arbitrary, tyrannical government, ruling us without a parliament to redress our grievances, and, by a standing army, to execute forcibly

his absolute commands; how he had engaged in the overthrow of our religion, by undermining the constitution of the Church of England, erecting an arbitrary ecclesiastical commission to dispossess our universities, and displace our ministers in every parish, and then to establish popery throughout the whole nation.

2. That in this distress, the whole nation applied themselves to the Prince of Orange, whose right to the succession made him justly appear as the proper person to assist and relieve this oppressed people; which prince came over at our invitation, was blessed with success, and all the favourers of popery and tyranny sunk at once; King James fled with his queen, and that person whom he called his son, and whom we now call justly the pretender.

3. Concerning the birth of this person, the nobility and gentry of England who invited over the prince, as may be seen by the memorial they presented to his highness, alleged, that there were violent presumptions that he was not born of the queen's body, which, however, they desired to leave to examination in a free parliament; which also the said prince expressed in his declaration, and that he was willing to leave the same to a free parliament.

4. That before a free parliament could be obtained, King James withdrew himself, and carried away his pretended son into the hands of the ancient enemies of this nation, and of our religion, the French, there to be educated in the principles of popery and enmity to this his native country.

By which action he not only declined to refer the legitimacy of his said son to the examination of the parliament, as the Prince of Orange had offered in his said declaration, but made such examination altogether useless and impracticable, he himself (King James) not owning it to be a legal parliament, and therefore not consenting to stand by such examination.

By the said abdication, and carrying away his said pretended son into the hands of the French to be educated in popery, &c., he gave the parliament of England and Scotland abundant reason for ever to exclude the said King James and his said pretended son from the government of these realms, or from the succession to the same, and made it absolutely necessary for them to do so, if they would secure the protestant religion to themselves and their posterity; and this

without any regard to the doubt whether he was the lawful son of King James or no, since it is inconsistent with the constitution of this protestant nation to be governed by a popish prince.

So that there is now no more room to examine whether the said pretender be the lawful son of King James, or whether he is, or will turn to be a protestant, the examination of the legitimacy by parliament which was offered by the Prince of Orange in his declaration, having been declined by his father, and himself having been delivered up into the hands of the sworn enemies both of our religion, constitution, and nation.

If King James would have expected he should be received as his son, and succeed to his crowns, he should have suffered his birth to have been legally determined by the English and Scotch parliament at that time, and have left him in good protestant hands to have been educated in the protestant religion, and in the knowledge of the laws and constitutions of his country; in which case it was more than probable, had his birth appeared clear, and his hereditary right just, the parliament might have set the crown upon his head, and declared him king under the protection of their deliverer, the Prince of Orange: but to talk of it now, when his birth has never been examined or cleared up, and while he has been bred up to man's estate in popery, and that the worst sort, viz., French popery; and after the parliament of the respective kingdoms uniting in one, have by an unalterable, indissoluble union, settled and entailed the crown upon another head, viz., the present queen, and entailed it after her majesty in the most illustrious house of Hanover, the next of blood in a protestant line: to talk now of proving the birth of the pretender, and of his abjuring his errors and turning protestant, this is a fraud so absurd and ridiculous, that we hope the people of Great Britain can never be blinded with it.

Especially considering the party who talk of these things to us: and this ought to move the good people of Britain to receive the proposals of the pretender with indignation; for who are they, dear fellow-protestants! that persuade you to these things? Are they not the friends of France and Rome? Do not all the papists join with them? Do not all those who hated the revolution, and who long to restore arbitrary government, join with them?

Why, if he will abjure the Romish errors and turn protes-

tant, why, I say, do the papists speak in his favour? Do any sect of religion love apostates! Those who forsake them and abjure them as heretical and erroneous! If they were not well assured that whatever appearing change he may make, he will still retain a secret affection to popery, they could not be rationally supposed to speak in his behalf.

But if that is not sufficient, what do they say to you as to his love of the liberty of his country? Has he been bred up in a tyrannical absolute court for nothing? Can he have any notion of government there but what is cruel, oppressive, absolute, and despotic? What principles of government will he come over with? and as he has sucked in tyranny with his milk, and knows no government but that of the most absolute monarch in the world, is this the man they would bring in to preserve the liberties and constitution of Britain?

When set upon the British throne, who are his allies and confederates? Will he be so ungrateful as not to be always at the devotion and command of the French king? a prince that took his father in a fugitive, an abdicated and ruined prince, when his fortunes were overthrown, and his crown taken from him; that made so many efforts to restore him, and hazarded his whole kingdom for it: if he forgets the kindness shown to his father, can he be so ungenerous, so unthankful, as to forget how the king of France nourished him from a child; how, after his father's death, he hazarded a second war to proclaim him king of Great Britain, and what expense he has been at to put him in possession of it? Should he forget all these obligations, he must be unfit to be called a Christian, much less a prince.

If he can act so barbarously to the French king, his benefactor, what must you Britons expect from him, who have done nothing to oblige him, but have for twenty-four years kept him and his father in exile, and treated them both with unsufferable indignity? If he can be ungrateful to the king of France, who has done so much for him, what must he be to you, who have done so much against him?

Again: if gratitude and honour have any influence upon him, if he has any sense of his obligation to the French king, will he not for ever be his most hearty, obedient, humble servant? Will he not always be in his interest, nay, ought he not to be so? Is he not tied by the laws of friendship and gratitude to be so?

Think, then, dear Britons! what a king this pretender must be; a papist by inclination; a tyrant by education; a Frenchman by honour and obligation: and how long will your liberties last you in this condition? And when your liberties are gone, how long will your religion remain? When your hands are tied; when armies bind you; when power oppresses you; when a tyrant disarms you; when a popish French tyrant reigns over you; by what means or methods can you pretend to maintain your protestant religion?

How shall the Church of England stand, when in subjection to the Church of Rome? You are now mixed with dissenters, and some are uneasy enough with them too; but our church will then be but a dissenting church; popery will be the establishment; the mass will succeed our common prayer, and fire and fagot instead of toleration, as you know was our ease before; for it is not the first time the papists have been tried.

Nor did Queen Mary promise, nay, swear less than is now promised for the pretender; for she swore to the Gospellers of Suffolk to make no alteration in religion; and they, like the blinded protestants of this age, brought her in, for which they were the first that felt the fury and rage of the popish party, and so we have great cause to believe it would be again.

THE CONCLUSION.

CONSIDER, then, honest countrymen and protestants, what you are doing; look on your families; consider your innocent children, who you are going to give up to be bred in abominable superstition and idolatry; look on your dear country, which you are preparing to make the seat of war, blood, and confusion; look on your neighbours, who, while they are resisting this inundation, for you may be assured honest men will resist it to the last, you are to fight with, whose throats you must cut, and in whose blood you must dip your hands; and, lastly, consider yourselves; how free, how quiet, how in peace, plenty, and in protestant liberty you now live, but are with your own hands pulling down upon you, so far as you entertain thoughts of the pretender, the walls of your own security, viz., the constitution, and making way for your French popish enemies to enter; to whom your religion, your

liberties, your estates, your families, and your posterity, shall be made a sacrifice, and this flourishing nation be entirely ruined.

In the last place, all that have any concern left for the good of their country, and for the preserving the protestant religion, will remember how much it is in the power of the people of Britain for ever to discourage all the attempts to be made in favour of these popish enemies, and to overthrow them in the execution; and it is on this foundation that this paper is made public. The late letter from Douay, written by some of that side, who very well understood the pretender's true interest, acknowledges this, and that if the people of England could not be wheedled and deluded into the design, it was never to be done by force.

And is this your case, Britons! Will you be ruined by a people whom you ought to despise? Have they not been twenty years trying your strength, till they find it impossible for them to master you? And are they brought to such a condition as to use all their arts and shifts to bring on a peace; and will you be brought now in cool thoughts, and after so long a struggle, to do that yourselves which you would never let them do; and which, without your most stupid negligence of yourselves, they could never do.

For this reason, I say, these lines are written, and this makes them just, and the argument rational. If I were to move you to what was not in your power, I should easily be answered, by being told, you could not do it; that you were not able, and the like; but is it not evident that the unanimous appearance of the people of Great Britain against the pretender would at once render all the party desperate, and make them look upon the design as utterly impracticable. As their only hope is in the breaches they are making in your resolutions, so if they should see they gain no ground there, they would despair, and give it over.

It would not be worth notice to inquire who are, and who are not for the pretender; the invidious search into the conduct of great men, ministers of state and government, would be labour lost: no ministry will ever be for the pretender, if they once may but be convinced that the people are steady; that he gets no ground in the country; that the aversions of the common people to his person and his government are not to be overcome: but if you, the good people of England,

slacken your hands ; if you give up the cause ; if you abate your zeal for your own liberties, and for the protestant religion ; if you fall in with popery and a French pretender ; if you forget the revolution, and King William, what can you expect ? who can stand by you then ? Who can save them that will destroy themselves ?

The work is before you ; your deliverance, your safety is in your own hands, and therefore these things are now written : none can give you up ; none can betray you but yourselves ; none can bring in popery upon you but yourselves ; and if you could see your own happiness, it is entirely in your power, by unanimous, steady adhering to your old principles, to secure your peace for ever. O Jerusalem ! Jerusalem !

AN ANSWER

TO A QUESTION, &c.

THAT we are to have a peace, or that the peace is made, what sort of peace, or how it has been brought about; these are questions the world begins to have done with, they have been so much, so often, and to so little purpose banded about, and tossed like a shuttlecock, from one party to another; the parties themselves begin to want breath to rail and throw scandal. Roper and Ridpath, like two Tom T—men, have thrown night-dirt at one another so long, and groped into so many Jakes's up to their elbows to find it, that they stink now in the nostrils of their own party. They are become perfectly nauseous to read; the nation is surfeited of them, and the people begin to be tired with ill-using one another. Would any tolerable face appear upon things, we might expect the people would be inclined to be easy; and were the eyes of some great men open, they may see this was the opportunity they never had before, to make the nation easy, and themselves safe. The main thing which agitates the minds of men now, is the protestant succession and the pretender. Much pains have been taken on both sides to amuse the world about this remaining dispute; one side to make us believe it is safe, and the other to convince us it is in danger. Neither side hath been able to expatiate upon the part they affirm. Those who say the protestant succession is secure, have not yet shown us any step taken, since these new transactions, for its particular security. Those who say it is in danger, have not so clearly determined, even among themselves, from what particular head of public management that danger chiefly proceeds. Both these uncertainties serve to perplex us, and to leave the thing more undetermined than consists with the public ease of the people's minds. To contribute something to that ease, and bring those whose place it is to

consider of ways to make the people easy in this case, this work is made public. Possibly, the question propounded may not meet with a categorical answer. But this is certain, it shall show you more directly what is the chief question which the substance of things before us is like to turn upon; and to which all our questions seem to tend. Were the great difficulty of the succession brought to a narrow compass, though we might spend fewer words about it, we should sooner come to a direct answer. Before I come to the great and chief question upon which this affair so much seems to turn, it seems needful to put the previous question upon which so much debate has been among us, and let that be examined. This previous question is this: Is there any real danger of the protestant succession? Is there any danger that the pretender shall be brought in upon us? Is there any danger of popery and tyranny, by restoring the son, as they call him, of abdicated King James? This is the previous question, as we may now call it. It is well known that there are some people among us, who are so far from allowing that there is any such danger as the said question mentions, that they will have it to be a token of disaffection to the government to put the question, and are for loading whoever shall offer to start such a question, with characters and party-marks odious to good men, such as incendiary, promoter of discontents, raiser of faction, divider of the people, and the like: names which the writer of these sheets, at the same time, both contemns and abhors. He cannot see that he is any enemy to the queen, in inquiring as diligently as possible, whether there are any attempts to depose her, or dangerous prospects of bringing in the hated rival of her glory and dominion. It is so far from that, that it is apparently the duty of every true subject of her majesty, to inquire seriously, whether the public peace, the queen's safety, her throne, or her person, is in any danger from the wicked design of her, and her people's enemies. Wherefore, and for the joint concern every protestant Briton has in this thing, I shall make no difficulty, plainly and seriously to state, and to answer this previous question, viz., Whether there is any danger of the protestant succession from the present measures, and from the present people concerned? I am not ignorant of what has been said by some, to prove that the present ministry cannot be suspected of having any view to the pre-

tender in any of their measures. The best reason which I have seen given upon that subject, is, that it is not their interest; and that as we have not found them fools that are blind to their own interest; that either do not understand, or pursue it. This we find handled sundry ways, by sundry authors, and very much insisted upon as a foundation for us to build upon. We shall give our thoughts upon it with plainness, and without fear or favour. Good manners require we should speak of the ministry with all due regard to their character and persons. This, a tract designed to inquire seriously of a weighty and essential, not a trifling thing, which requires but a trifling examination; nor shall it be handled here with satire and scurrility. We approve neither of the flatteries of one side, nor the insultings of the other. We shall readily and most willingly join with those who are of opinion that it is not the interest of the ministry to be for the pretender, and that the ministry are not blind to, or careless of, their own interest; and consequently, that the ministry cannot be for the pretender. This I hope may be called a direct answer. When I say “cannot,” I must not be understood potentially, that they have no moral capacity; but they cannot without such inconsistencies, contradictions, and improbable things happening in, which render it highly irrational so much as to suppose it of them. To shut the door against any possibility of evil, it may be needful also to take it with us as we go, what we mean by the words “be for” the pretender; and this can be no otherwise understood, than to have a design, however remote, and upon whatever views, to bring him in to possess the throne of these kingdoms. The matter then being laid down thus, as sincerely and plainly as possible, we come to the question point-blank, and think it our duty to say with the greatest sincerity, that we do not believe the ministry are in any kind, or with any prospect, near or remote, acting for or with a design or view to bring in the pretender. Having granted this, we must, however, to prevent any breaking in, by way of evil on one hand, or triumph on the other, subjoin immediately, that we do not in the least grant by this that the protestant succession is in no danger, even from several of the measures now taken in the world. It is far from any reflection upon the ministry to say that, however they may act upon a right sincere principle

for the protestant succession in all they do, which, as above, we profess to believe, yet that many of the tools they make use of are of another make, and have no edge to cut any other way; no thoughts to move them towards any other end; no other centre, which they can have any tendency to; that the pretender's interest is the magnet which draws them by its secret influence to point to him as their pole; that they have their aim at his establishment here, and own it to be their aim; and as they are not shy to profess it among themselves, so their conduct in many things makes it sufficiently public. This is not meant as any reflection upon the ministry for making use of such men: the late ministry did the same, and every ministry will, and must employ men sometimes, not as they always join with them in their politic principles, but as either the men are found useful in their several employments, or as the ministry may be under other circumstances, which makes it necessary to them to employ them. Nor, as the Review well enough observed, does it follow that because the ministry have employed or joined with jacobites in the public affairs, that therefore they must have done it with a jacobite principle. But let the ministry employ these men by what necessity, or upon what occasion they will, though it may not follow that the ministry are therefore for the pretender, yet it does not also follow that there is no danger of the protestant succession from the employing those sort of people: For, what if the queen should die?

The ministry, it is hoped, are established in the interest of their queen and country; and therefore it has been argued, that supposing the ministry had the pretender in their eye, yet that it is irrational to suggest that they can have any such view during the life of her present majesty. Nay, even those professed jacobites, who we spoke of just now, cannot be so ungrateful to think of deposing the queen, who has been so bountiful, so kind, so exceeding good to them, as in several cases to suffer them to be brought into the management of her own affairs, when by their character they might have been thought dangerous, even to her person; thus winning and engaging them by her bounty, and the confidence that has been placed in them, not to attempt anything to her prejudice, without the most monstrous ingratitude, without flying in the face of all that sense of honour and obliga-

tion, which it is possible for men of common sense to entertain. And it can hardly be thought that even papists themselves, under the highest possessions of their religious zeal, can conquer the native aversions they must have to such abominable ingratitude, or to think of bringing in the pretender upon this protestant nation, even while the queen shall be on the throne. But though this may, and some doubt that also, tie up their hands during the queen's life, yet they themselves give us but small reason to expect anything from them afterward, and it will be hard to find anybody to vouch for them then. These very jacobites, papists, and professed enemies to the revolution, may be supposed upon these pretensions to be quiet, and offer no violence to the present establishment while her majesty has the possession, and while that life lasts, to which they are so much indebted for her royal goodness and clemency. But what would they do if the queen should die?

Come we next to the French king. We are told, that not the French king only, but even the whole French nation, are wonderfully forward to acknowledge the obligation they are under to the justice and favour which they have received from her majesty, in the putting an end to the war; a war which lay heavy upon them, and threatened the very name of the French nation with ruin, and much more threatened the glory of the French court, and of their great monarch, with an entire overthrow, a total eclipse. A war which, by their own confession, it was impossible for them long to have supported the expenses of, and which, by the great superiority of the allies, became dreadful to them, and that every campaign more than the other; a war which they were in such pain to see the end of, that they tried all the powers and courts in Christendom, who were the least neutral, to engage a mediation in order to a treaty, and all in vain; and a war which, if her majesty had not inclined to put an end to, must have ended perhaps to the disadvantage and confusion of both France and Spain, if not of all Christendom. The obligations the French are under for the bringing this war to so just and honourable a conclusion are not at all concealed. Nay, the French themselves have not been backward to make them public. The declarations made by the French king of his sincerity in the overtures made for a general peace, the protestations of his being resolved to enter into an entire

confidence, and a league offensive and defensive with the queen's majesty for the preservation of the peace of Christendom, his recognition of her majesty's just right to the crown, his entering into articles to preserve the union, acknowledging the ninth electorate in favour of the house of Hanover, and joining in the great affair of the protestant succession. As these all convince the world of the necessity his affairs were reduced to, and the great advantages accruing to him by a peace, so they seem to be so many arguments against our fears of the French entering into any engagements against the crown of Britain, much less any against the possession of the queen during her life. Not that the honour and sincerity of the king of France is a foundation fit for her majesty or her people to have any dependence upon; and the fraction of former treaties by that court, when the glory of that monarch, or his particular views of things has dictated such opportunity to him as he thought fit to close with, are due cautions to us all not to have any dependence of that kind. But the state of his affairs, and the condition the war has reduced him to, may give us some ground to think ourselves safe on that side. He knows what power he has taken off from his enemies in making peace with her majesty; he knows very well with what loss he sits down, how his affairs are weakened, and what need he has to take breath after so terrible a war; besides the flame such an action would kindle again in Europe; how it would animate this whole British nation against him, in such a manner, and endanger bringing in a new war, and perhaps a new confederacy upon him so violently, and that before he would be in a condition to match them, that no one can reasonably suppose the French king will run the hazard of it. And these things may tend to make some people easier than ordinary in the affair of the succession, believing that the French king stands in too much need of the favour of the queen of Great Britain, whose power it well behoves him to keep in friendship with him, and whose nation he will be very cautious of provoking a third time, as he has already done twice, to his fatal experience. All these things, we say, may seem pretty well to assure us that nothing is to be feared on that side so long as her majesty lives to sit upon the British throne. But all leaves our grand question unanswered; and though we may argue strongly for the French king's conduct while the

present reign continues, yet few will say, What he will do if the queen should die?

Nay, we may even mention the pretender himself, if he has any about him whose councils are fit to be depended upon, and can direct him to make a wise and prudent judgment of his own affairs; if he acts by any scope of policy, and can take his measures with any foresight; most easy is it for them to see that it must be in vain for him to think of making any attempt in Britain during the life of the queen, or to expect to depose her majesty, and set himself up. The French power, upon which he has already in vain depended, as it has not hitherto been able to serve him, or his father, but that their exile has continued now above twenty-four years, so much less can he be able to assist him now, while he has been brought as it were to kneel to the British court to put an end for him to this cruel destructive war; the reason is just spoken to, viz., that this would be to rekindle that flame which he has gotten so lately quenched, and which cost him so much art, so much management, so much submission to the allies, to endeavour the quenching of before. To attack the queen of Great Britain now in behalf of the pretender, would not only be in the highest degree ungrateful, perfidious, and dishonourable, but would for ever make the British court, as well as the whole nation, his violent and implacable enemies; but would also involve him again in a new war with all Europe, who would very gladly fall in again with Britain to pull down more effectually the French power, which has so long been a terror to its neighbours; so that the pretender can expect no help from the king of France. As to what the pope, the Spaniard, and a few petty popish powers, who might pretend upon a religious prospect to assist him, and with whose aid, and the assistance of his party here, he may think fit to hazard an attempt here for the crown, it is evident, and his own friends will agree in it, that while the queen lives, it is nonsense, and ridiculous for them to attempt it; that it would immediately arm the whole nation against them, as one man; and in human probability it would, like as his supposed father was served at the revolution, be the ruin of his whole interest, and blow him at once quite out of the nation. I believe that there are very few who alarm themselves much with the fears of the pretender, from the apprehension of his own strength from

abroad, or from his own party and friends at home here, were they once sure that he should receive no assistance from the king of France. If then the king of France cannot be reasonably supposed either to be inclined, or be in a condition to appear for him, or act in his behalf, during the life of the queen, neither can the pretender, say some, unless he is resolved to ruin all his friends, and at last to ruin himself, make any attempt of that kind during her majesty's life. But what if the queen should die?

Having then viewed the several points of the nation's compass whence our danger of jacobite plots and projects against the protestant succession may be expected to come, let us now inquire a little of the state of the nation, that we make a right estimate of our condition, and may know what to trust to in cases of difficulty, as they lie before us. In doing this, as well to avoid giving offence to the people now in power, as to the entering into the quarrels which engage the present contending parties in this divided nation, we shall allow, however some may think fit to question it, the main debate; and grant this for the present as a fundamental, viz., That we are in no danger of the pretender during this queen's reign, or during this ministry's administration under her majesty; and avoiding all contention of that kind, shall allow our condition to be safe in every article as we go along, for so long as the queen lives, referring the observation of things in every head to those who can answer the main question in our title, viz., But what if the queen should die?

First of all, it may be noticed, that the present safety of this nation, whether we respect liberty, religion, property, or public safety and prosperity, depends upon this one fundamental, viz., that alluding reverently to that text of Scripture, we are all built upon the foundation of the late revolution, established law and right being the chief corner-stone. By this it is that her majesty is made our queen, the entail of the crown being reserved in the remainder to her majesty in the act of settlement made at the filling up the vacant throne, and by all those subsequent acts which her majesty's title was confirmed by, during the life of the late king. This revolution is that upon which the liberties and religion of this nation were rebuilt after the conflagration that was made of them in the calamitous times of King Charles II., and King

James II., and from hence to the love of liberty which is found almost to be naturally placed in the hearts of true Britons; and upon the view wherof they have acted all along in the late war, and in all their transactions at home has obtained the title of a "revolution principle." Noting this then, as above, that her majesty is our queen by virtue of the revolution, and that during her reign that establishment alone must be the foundation of all her administration, this must effectually secure us against any apprehension that the persons acting under her majesty can act in behalf of the pretender during her majesty's life; for that they must immediately overthrow the throne, turn the queen out of it, and renounce the revolution, upon which her majesty's possession is established: as the revolution, therefore, is the base upon which the throne of her majesty is established, so her majesty, and all that act under her, are obliged to act upon the foot of the said revolution, even *will* they, *nil* they, or else they sink immediately out of rightful power to act at all; her majesty's title would fall to the ground, their own commissions would from that hour be void; they must declare their royal mistress and benefactress a subject to the pretender, and all her pretences of rightful possession injurious, and an usurpation. These things being so plain, that he that runs may read them, seem to stop all our mouths from so much as any suggestion that anybody can attempt to bring in the pretender upon us during the life of her present majesty. But what if the queen should die?

Subsequent to the revolution, many essential things are formed by our parliaments and government for the public good, on the foundation of which much of the present peace of the nation is founded; and while the said revolution-foundation stands fast, there is good ground to believe those essential points shall be preserved. If then we are satisfied that the revolution principle shall subsist as long as the queen lives, then for so long we may have good ground to believe we shall enjoy all those advantages and benefits which we received from the said revolution. But still, when we look back upon those dear privileges, the obtaining of which has cost so much money, and the maintaining of which has cost so much blood, we must with a deep sigh reflect upon the precarious circumstances of the nation, whose best privileges hang uncertain upon the nice and tender thread of royal

mortality, and say we are happy while these last, and these may last while her majesty shall live. But what if the queen should die?

Let us descend to some other particulars of those blessings which we do enjoy purely as the effect of the revolution, and examine in what posture we stand with respect to them, and what assurance we have of their continuance: and first, as to TOLERATION. This was the greatest and first blessing the nation felt after the immediate settlement of the crown, which was established by virtue of the revolution engagement, mentioned in the Prince of Orange's declaration. The design of this law, as it was to give liberty for the worship of God to such dissenters as could not conform to the Church of England, and to give ease to tender consciences, so as by the law itself is expressed; it was to ease the minds of their majesties' subjects, and to give general quiet to the nation, whose peace had been frequently disturbed by the violence of persecution. We have seen frequent assurances given of the inviolable preservation of this toleration by her majesty from the throne in her speeches to the parliament; and during her majesty's reign, we have great reason to hope the quiet of the poor people shall not be broken by either repealing that law, or invading the intent and meaning of it while in force; and there are a great many reasons to hope that the present ministry are so far convinced of the necessity of the said toleration, in order to preserve the peace, and the common neighbourhood of people, that they can have no thought of breaking in upon it, or any way making the people who enjoy it, uneasy. Nay, the rather we believe this, because the ferment such a breach would put the whole nation into is not the safest condition the government can be in upon any account; and as the ministry cannot be supposed to desire to give uncasiness and provocation to the commons, but rather to keep them easy and quiet, and prevent the enemies of the present management from having any handle to take hold of to foment distractions and disturbances among the people, it cannot be thought that they will push at the toleration, so as to deprive the people of so considerable a thing. But after the present happy establishment shall have received such a fatal blow as that will be of the queen's death, and when popish pretenders, and French influences, shall prevail, it may well be expected then, that not toleration of dissenters

only, but even of the whole protestant religion, may be in danger to be lost; so that, however secure we are of the free enjoyment of liberty of religion during the queen's life, we may be very well allowed to ask this question with respect to, not toleration only, but the Church of England also, viz., what will become of them, If the queen should die?

From toleration in England, come we to the constitution of religious affairs in Scotland; and here we have different views from what the case in England affords us; the powerful interest of jacobitism, if it may be said to be formidable anywhere, is so there. The enemies of the revolution are all the implacable enemies of the church establishment there: nay, many thousands are the declared enemies of the revolution, and of the queen's being upon the throne, from a mere implacable aversion to the presbyterian kirk, which is erected and established by that very revolution which has set the queen upon the throne. The union, which has yet farther established that presbyterian kirk, is for that reason the aversion of the same people, as it is the aversion of the jacobites, by being a farther confirmation of the Hanover succession, and a farther fixing the queen upon the throne. Now, as it is sure, that as before, while the queen lives, and the revolution influence carries its usual force in the kingdoms now united, the presbyterian kirk must and will remain, and all the little encroachments which have been made upon the kirk, as it may be observed, though they have created uneasiness enough, yet they still seem to suppose that the establishment itself cannot be overthrown. The union and the revolution settlement remain in Scotland, and must remain, as is said; while the queen lives we can have no apprehensions of them; the reasons are given above; and as we said before, we are to take them for granted in this discourse, to avoid other cavils. While then the revolution and the union are to be the foundation of the administration in Scotland, the presbyterian established church government there must also remain as the only legal kirk constitution, and so long we can entertain no fears of anything on that account. But what if the queen should die?

From such religious concerns as affect presbyterians, and other sectaries, or dissenters, as we call them, let us take a look at the remote danger of the Church of England. We

have had a great deal of distraction in the time of the late ministry about the danger of the church; and as it appears by the memorial of the church of England, published in those times, and reprinted since; by the sermons of Dr. Sacheverell, and the eminent speeches at his trial, that danger was more especially suggested to come from the increase of dissenters here, the ministry of the whigs, and the establishing presbyterianism in the north of Britain. These things being in a great measure now overthrown by the late change of the ministry, and the new methods taken in the management of the public affairs, the people, who were then supposed to aim at overthrowing the ministry of those whigs, are pleased to assure us of the safety and flourishing condition of the church now more than ever; while the other party, taking up the like cry of the danger of the church, tells us, that now a real visible appearance of danger to the church is before us; and that not only to the church of England as such, but even to the whole interest and safety of the protestant religion in Britain; that this danger is imminent and unavoidable, from the great growth and increase of popery, and professed jacobitism in the nation. This indeed they give but too great demonstrations of from the spreading of popish agents among us, whose professed employment it is to amuse and impose upon the poor country people, as well in matters of jacobitism as of religion, and the great successes these emissaries of Satan have obtained in several parts of Britain, but especially in the north. Now, though we cannot but acknowledge but that much of this alarm is justly grounded, and that the endeavours of popish and jacobite agents and emissaries in divers parts of Britain are too apparently successful, yet as wise men could never see into the reality of such danger, as was by some people pretended to be impending over the church in the time of the late ministry, so neither can we allow that popery is so evidently at the door at this time, as that we should be apprehensive of having the church of England immediately transversed, and the protestant religion in Britain: and one great reason for this opinion is, that her majesty, who is a zealous professor of the protestant religion, and has been bred up in the bosom of the church of England, is so rooted in principle, and has declared from her very infancy such horror and aversion to popery, that it cannot enter into any true protestant thoughts

to apprehend anything of that kind, while her majesty lives. But, Lord have mercy upon us! What if the queen should die?

From religious matters, come we next to consider civil interest, liberties, privileges, properties; the great article that in the late revolution went always coupled in the nation's negative with that of religion, as if they were woven together, and was always cried upon by the mob in one breath, viz., No popery, no slavery. The first of these concerns our civil interest; such as the public credit, by the occasions of a long and expensive war, and to prevent levying severe taxes for the carrying on the war, such as would be grievous to trade, oppressive to the poor, and difficult to be paid. The parliament, for the ease of the subjects, thought fit, rather to lay funds of interest to raise money upon, by way of loan, establishing those interests, payable as annuities and annual payments, for the benefit of those who advanced their money for the public service. And to make these things current, that the public credit might be sacred, and the people be made free to advance their money, all possible assurances of parliament have been given, that the payments of interests and annuities shall be kept punctually, and exactly according to the acts of parliament, that no misapplications of the money shall be made, or converting the money received upon one to make good the deficiency of the other; and hitherto the injunctions of that kind have been exactly observed, and the payments punctually made, which we call the credit of the nation. At the first of the late change, when the new ministry began to act, the fright the people were put in upon the suggestion of some, that all the parliamentary funds should be wiped off with a sponge, was very considerable; and the credit of those funds sunk exceedingly with but the bare apprehension of such a blow, the sums being infinitely great, and the number of indigent families being incredibly many, whose whole substance lay in those securities, and whose bread depended upon those interests being punctually paid; but wiser men saw quickly there was no ground for those fears; that the new ministry stood upon a foot that could no more be supported without the public credit than those that went before them; that especially while they were under a necessity of borrowing farther sums, they behaved to secure the punctual paying of the old; and by making the

people entirely easy, not only take from them the apprehensions they were under of losing what they lent already, but make them forward and willing to advance more to this purpose, they not only endeavoured to give the people all satisfaction that their money was safe, and that the funds laid by the parliament in the former ministry should be kept sacred, and the payments punctually made, but took care to obtain parliamentary securities, by real funds to be settled for the payment of those debts contracted by the former ministry, and for which no provision was made before. This was the establishment of a fund for payment of the interests of the navy debt, ordnance, victualling, transport, &c., to the value of seven or eight millions, which is the substance of what we now call the South-sea stock. By this means the public credit, which it was suggested would receive such a blow at the Change as that it should never recover again, and that it would be impossible for the new ministry to raise any needful sums of money for the carrying on the war, or for the public occasions, recovered itself so as that the government hath ever since found it easy to borrow whatever sums they thought fit to demand, in the same manner as before. Now that these loans are safe, no man that weighs the circumstances of the ministry and government, and the circumstances of the people, can doubt; the first being in a constant necessity of supporting the public credit for the carrying on the public affairs, on any sudden emergency that may happen, and being liable to the resentment of parliament, if any open infraction should be made upon the funds, which touches so nearly the honour of the parliaments, and the interest of most of the best families in the nation. While this is the case, we think it is not rational to believe that any ministry will venture to attack parliamentary credit, in such a manner; and this will eminently be the case as long as her majesty sits on the throne. Nor can a thing so barefacedly tyrannical and arbitrary, and, above all, dishonourable and unjust, be suggested as possible to be attempted in the reign of so just and conscientious a prince; so that we may be very willing to allow that there is not the least danger of the public faith being broken, the public credit lost, the public funds stopped, or the money being misapplied. No cheat, no sponge, while her majesty lives. But, alas for us! What if the queen should die?

From this piece of evil right, come we to those things we call liberties and privileges. These may indeed be joined in some respects; but as we are engaged in speaking particularly to such points, wherein our present dangers do or do not appear, it is proper to mention them apart. Privileges may be distinguished here from liberties, as they respect affairs of trade, corporations, parliaments, and legislature, &c. Liberty, as they respect laws, establishments, declared right, and such like. As to the first, from the revolution to this time, they have not only been confirmed, which we had before, but many privileges added to the people, some of which are essential to the well-being of the kingdom. All the *quo warrantos* against corporation privileges, the high commission court against the church's privileges extending prerogative in detriment of the subject's natural right, and many such things, which were fatal to the privileges of this protestant nation, were laid aside, and received their just condemnation in the revolution; and not so only, but the privileges obtained since the revolution by consent of parliament, are very considerable; such as the toleration to this part of Britain, and the establishment of the church of Scotland; for the north part; in matters of religion; such as the triennial election of parliaments; in civil affairs, such as the several corporations granted upon really useful foundations in trade; as the bank company, &c., and such like. These and many more, which may be named, and which these are named only as heads of, are secured to us by law; and those laws yet again made sure to us by the honour and veracity of her majesty, and as long as her majesty's life is spared to these nations, we have great reason to believe we shall rather increase than lose our privileges. But what if the queen should die?

Our LIBERTIES, which come next in order, may be summed up in what we call legal, and native right; or such as by the natural consequence of a free nation, and a just government; or such as by mutual assent and consent of sovereign and subject, are become the legal right of the latter. These, needless to be enumerated here, are summed up into one; or are expressly enacted by statute law, and thereby become fundamental to the constitution. These receive no wound, but one of these two ways, either by open infraction and contempt of right, or by dispensing arbitrary power; both of which, by the many assurances from the throne, by the con-

stant jealousies of parliaments, and the full liberty they have more of late than ever taken to examine into, and censure breaches of the laws, we are very well assured shall not be attempted in her majesty's time: nay, on the contrary, the superiority, and influence of parliaments over and upon the management of public matters, nay, even their influence upon the royal majesty of the sovereign, has been such, and has in such a manner insensibly increased of late, that the like has never been known or practised in this nation for some ages before. We see her majesty declines extending her prerogative, either to the detriment of her subjects, in cases civil or religious, and wherein it might be so extended; nay, when even the parliament have desired her to extend it: so that we have a great satisfaction in the safety of our established liberties, and that no tyrannical, arbitrary invasions of right shall be made during her majesty's reign. But what if the queen should die?

In like manner for our properties, our estates, inheritance, lands, goods, lives, liberties, &c. These are effectually secured by laws of the land, and the sovereign in this country, having no right, but by law, to any part of the subject's estate, causes that estate to be called PROPERTY. The kings and queens of Britain are monarchs limited to act by the laws. When they cease to rule by law, the constitution is broken, and they become tyrants, and arbitrary, despotic invaders of right. This is declared by the revolution, wherein the rights of the subject are openly, not set down only, but claimed, demanded as what justice required should be granted to them, and as what the sovereign, as aforesaid, has no right, no pretence, no just authority to take, or detain from him. This is the great capital and fundamental article of Magna Charta, and the foundation upon which all the laws subsequent and consequential to Magna Charta have been made. [*No freeman shall be taken or imprisoned, or be disseized of his freehold, or liberties, or free customs, or be outlawed, or exiled, or otherwise destroyed; nor we will not pass upon him, nor condemn him, but by lawful judgment of his peers, or by the law of the land.* Magna Charta, cap. xxix.] The words are plain and direct; and as to the subject we are now upon, they require no comment, no explication. Whatever they do, as to pleading in law the proof of the subject's right to the free possession of his own property, is also the less needful to

enlarge upon here, because it is acknowledged in full and express terms by the sovereign, as well in practice, as in expression. Her majesty, adhering strictly to this, as a rule, has from the beginning of her reign made it her golden rule, to govern according to law. Nor, while the establishment of the crown itself is built upon the legal constitution of this nation, can it be otherwise here: that prince that governs here and not by law, may be said rather to oppress than to govern; rather to overrule, than to rule over his people. Now it cannot without great and unjustifiable violence to her majesty's just government, be suggested, that we are in any danger of oppression during the righteous administration of her majesty's reign. The queen raises no money without act of parliament, keeps up no standing army in time of peace, disseizes no man of his property or estate; but every man sits in safety under his own vine, and his fig-tree; and we doubt not but we shall do as long as her majesty lives. But what if the queen should die?

Possibly cavils may rise in the mouths of those whose conduct this nice question may seem to affect, that this is a question unfit to be asked, and questionless such people will have much to say upon that subject; as that it is a factious question, a question needless to be answered, and impertinent therefore to be asked; that it is a question which respects things remote, and serves only to fill the heads of the people with fears and jealousies; that it is a question to which no direct answer can be given, and which suggests strange surmises, and amuses people about they know not what, and is of no use, but to make people uneasy without cause.

As there is no objection, which is material enough to make, but is material enough to answer, so this, although there is nothing of substance in it, may introduce something in its answer of substance enough to consider: it is therefore most necessary to convince the considering reader of the usefulness and necessity of putting this question; and then likewise the usefulness and necessity of putting this question now at this time; and if it appear to be both a needful question itself, and a seasonable question, as to time, the rest of the cavils against it will deserve the less regard. That it is a needful question, seems justified more abundantly from a very great example, to wit, the practice of the whole

nation, in settling the succession of the crown. This I take to be nothing else but this: the queen having no issue of her body, and the pretender to the crown being expelled by law, included in his father's disastrous flight and abdication: when the parliament came to consider of the state of the nation, as to government as it now stands; that King William being lately dead, and her majesty with universal joy of her people, being received as queen, the safety, and the lasting happiness of the nation is so far secured. But what if the queen should die?

The introduction to all the acts of parliaments for settling the crown, implies thus much, and speaks directly this language, viz., to make the nation safe and easy in case the queen should die: nor are any of these acts of parliament impeached of faction, or impertinences; much less of needless blaming the people, and filling their heads with fears and jealousies. If this example of the parliament is not enough justifying to this inquiry, the well known truth, upon which that example of parliament is grounded, is sufficient to justify it, viz., that we all know the queen must die. None say this with more concern and regret than those who are forwardest to put this question, as being of the opinion above said, that we are effectually secured against the pretender, and against all the terrifying consequences of the Frenchified governors, during her majesty's life. But this is evident, the queen is mortal, though crowned with all that flattering courtiers can bring together, to make her appear great, glorious, famous, or what you please; yet the queen, yea, the queen herself, is *mortal*, and MUST die. It is true, kings and queens are called gods; but this respects their sacred power: nothing supposing an immortality attending their persons, for they all die like other men, and their dust knows no distinction in the grave. Since then it is most certain that the queen must die, and our safety and happiness in this nation depends so much upon the stability of our liberties, religion, and aforesaid dependencies after her majesty's life shall end, it cannot be a question offensive to any who has any concern in the public good, to inquire into what shall be the state of our condition, or the posture of our affairs, when the queen shall die; but this is not all neither. As the queen is mortal, and we are assured she must die, so we are none of us certain as to be able to know

when, or how soon, that disaster may happen; at what time, or in what manner. This then, as it may be remote, and not a long time; God of his infinite mercy grant it may be long first, and not before this difficult question we are upon be effectually and satisfactorily answered to the nation; so on the other side, it may be near; none of us know how near, the fatal blow may befall us soon, and sooner far than we may be ready; for to-day it may come, while the cavilling reader is objecting against our putting this question, and calling it unreasonable and needless; while the word is in thy very mouth, mayest thou hear the fatal, melaneholy news, the queen is dead. News that must one time or other be heard; the word will certainly come some time or other, to be spoken in the present sense, and to be sure in the time they are spoken in. How can any one then say, that it is improper to ask what shall be our ease, what shall we do, or what shall be done with us, If the queen should die?

But we have another melaneholy incident, which attends the queen's mortality, and which makes this question more than ordinarily seasonable to be asked at this time; and that is, that not only the queen is mortal, and she must die, and the time uncertain; so that she may die, even to-day, before to-morrow, or in a very little space of time: but her life is, under God's providence, at the mercy of papists and jacobites' people; who, the one by their principles, and the other by the circumstances of their party, are more than ordinarily to be apprehended for their bloody designs against her majesty, and against the whole nation. Nay, there seems more reason to be apprehensive of the dangerous attempts of these desperate people, at this time, than ever, even from the very reasons which are given all along in this work, for our being safe in our privileges, our religious and civil rights, during her majesty's life. It would be mispending your time to prove that the papists and jacobite parties in this nation, however they may, as we have said, be under ties and obligations of honour, interest, and gratitude, &c., not to make attempt upon us during the queen's life; yet that they are more encouraged at this time than ever they were to hope and believe, that when the queen shall die, their turn stands next. This, we say, we believe is lost labour to speak of: the said people, the popish and tory party, will freely own and oppose it. They all take their obligations to the

queen to end with her majesty's life. The French king, however in honour and gratitude he may think himself bound not to encourage the pretender to insult her majesty's dominions, while the queen, with whom he personally is engaged by treaty, shall remain alive, will think himself fully at liberty from those obligations when the queen shall die. If we are not misinformed of the French affairs, and of the notions they have in France of these things, they are generally no otherwise understood than that the king of France is engaged by the peace now in view, not to disturb her majesty's possession during her reign and her life; but that then the pretender's right is to be received everywhere. The pretender himself, howsoever, as above said, he may despair of his success in attempting to take possession during the queen's life, will not fail to assume new hopes at her majesty's death: so much then of the hopes of popery and French power; so much of the interest of the pretender depending upon the single thread of life of a mortal person; and we being well assured that they look upon her majesty only as the incumbent in a living, or tenant for life in an estate, what is more natural, than in this case for us to apprehend danger to the life of the queen; especially to such people, who are known not to make much consciences of murdering princes, with whom the king-killing doctrine is so universally received, and who were so often detected of villanous practices and plots against the life of Queen Elizabeth, her majesty's famous predecessor, and that upon the same foundation, viz., the queen of Scots being the popish pretender to the crown; what can we expect from the same party, and men acting from the same principles, but the same practices? It is known that the queen, by course of nature, may live many years, and these people have many reasons to be impatient of so much delay. They know that many accidents may intervene to make the circumstances of the nation, at the time of the queen's death, less favourable to their interests than they are now; they may have fewer friends, as well in power, as out of power, by length of time, and the like: these, and such as these considerations may excite villanous and murderous practices against the precious life of our sovereign (God protect her majesty from them); but while all these considerations so naturally offer themselves to us, it seems most rational, needful, seasonable, and just, that we should

be asking and answering this great question, What if the queen should die ?

Thus far we have only asked the question itself, and showed our reasons, or endeavoured to justify the reasonableness of the inquiry. It follows that we make some brief essay as an answer to the question. This may be done many ways ; but the design of this tract is rather to put the question into your thought, than to put an answer into your mouths. The several answers which may be given to this important question may not be proper for a public print ; and some may not be fit so much as to be spoken. The question is not without its uses, whether it be answered or no, if the nation be sufficiently awakened but to ask the question among themselves ; they will be brought by thinking of the thing to answer it one to another in a short space. The people of Britain want only to be showed what imminent danger they are in, in case of the queen's decease : how much their safety and felicity depend upon the life of her majesty, and what a state of confusion, distress, and all sorts of dreadful calamities they will fall into at her majesty's death, if something be not done to settle them before her death ; and if they are not during her majesty's life secured from the power of France, and the danger of the pretender.

END OF “ WHAT IF THE QUEEN SHOULD DIE ? ”

REASONS

AGAINST

THE SUCCESSION, &c.

WHAT strife is here among you all? And what a noise about who shall or shall not be king, the Lord knows when? Is it not a strange thing we cannot be quiet with the queen we have, but we must all fall into confusion and combustions about who shall come after? Why, pray folks, how old is the queen, and when is she to die? that here is this pother made about it. I have heard wise people say the queen is not fifty years old, that she has no distemper but the gout, that that is a long-life disease, which generally holds people out twenty, or thirty, or forty years; and let it go how it will, the queen may well enough linger out twenty or thirty years, and not be a huge old wife neither. Now, what say the people, must we think of living twenty or thirty years in this wrangling condition we are now in? This would be a torment worse than some of the Egyptian plagues, and would be intolerable to bear, though for fewer years than that. The animosities of this nation, should they go on, as it seems they go on now, would by time become to such a height, that all charity, society, and mutual agreement among us, will be destroyed. Christians shall we be called! No; nothing of the people called Christians will be to be found among us. Nothing of Christianity, or the substance of Christianity, viz., charity, will be found among us! The name Christian

may be assumed, but it will be all hypocrisy and delusion; the being of Christianity must be lost in the fog, and smoke, and stink, and noise, and rage, and cruelty, of our quarrel about a king. Is this rational? Is it agreeable to the true interest of the nation? What must become of trade, of religion, of society, of relation, of families, of people? Why, hark ye, you folk that call yourselves rational, and talk of having souls, is this a token of your having such things about you, or of thinking rationally; if you have, pray what is it likely will become of you all? Why, the strife is gotten into your kitchens, your parlours, your shops, your counting-houses, nay, into your very beds. You gentlefolks, if you please to listen to your cookmaids and footmen in your kitchens, you shall hear them scolding, and swearing, and scratching, and fighting among themselves; and when you think the noise is about the beef and the pudding, the dish-water, or the kitchen-stuff, alas, you are mistaken; the feud is about the more mighty affairs of the government, and who is for the protestant succession, and who for the pretender. Here the poor despicable scullions learn to cry, High Church, No Dutch Kings, No Hanover, that they may do it dexterously when they come into the next mob. Here their antagonists of the dripping-pan practise the other side clamour, No French Peace, No Pretender, No Popery. The thing is the very same up one pair of stairs: in the shops and warehouses the apprentices stand some on one side of the shop, and some on the other, (having trade little enough), and there they throw high church and low church at one another's heads like battledore and shuttlecock; instead of posting their books, they are fighting and railing at the pretender and the house of Hanover; it were better for us certainly that these things had never been heard of. If we go from the shop one story higher into our family, the ladies, instead of their innocent sports and diversions, they are all falling out one among another; the daughters and the mother, the mothers and the daughters; the children and the servants; nay, the very little sisters one among another. If the chambermaid is a slattern, and does not please, Hang her, she is a jade; or, I warrant she is a highflier; or, on the other side, I warrant she is a whig; I never knew one of that sort good for anything in my life. Nay, go to your very bed-chambers, and even in bed the man and wife shall quarrel about it.

People! people! what will become of you at this rate? If ye cannot set man and wife together, nor your sons and daughters together, nay, nor your servants together, how will ye set your horses together, think ye? And how shall they stand together twenty or thirty years, think ye, if the queen should live so long? Before that time comes, if you are not reduced to your wits, you will be stark mad; so that unless you can find in your hearts to agree about this matter beforehand, the condition you are in, and by that time will in all likelihood be in, will ruin us all; and this is one sufficient reason why we should say nothing, and do nothing about the succession, but just let it rest where it is, and endeavour to be quiet; for it is impossible to live thus. Further, if Hanover should come while we are in such a condition, we shall ruin him, or he us, that is most certain. It remains to inquire what will be the issue of things. Why, first, if ye will preserve the succession, and keep it right, you must settle the peace of the nation: we are not in a condition to stand by the succession now, and if we go on we shall be worse able to do so; in his own strength Hanover does not pretend to come, and if he did he must miscarry: if not in his own, in whose then but the people of Britain? And if the people be a weakened, divided, and deluded people, and see not your own safety to lie in your agreement among yourselves, how shall such weak folk assist him, especially against a strong enemy; so that it will be your destruction to attempt to bring in the house of Hanover, unless you can stand by and defend him when he is come; this will make you all like Monmouth's men in the west, and you will find yourselves lifted up to halters and gibbets, not to places and preferments. Unless you reconcile yourselves to one another, and bring things to some better pass among the common people, it will be but to banter yourselves to talk of the protestant succession; for you neither will be in a condition to bring over your protestant successor, or to support him on the throne when you have brought him; and it will not be denied, but to make the attempt, and not succeed in it, is to ruin yourselves; and this I think a very good reason against the succession of the house of Hanover.

Another argument relates something to the family of Hanover itself. Here the folk are continually fighting and quarrelling with one another to such a degree as must infal-

libly weaken and disable the whole body of the nation, and expose them to any enemy, foreign or domestic. What prince, think you, will venture his person with a party or a faction, and that a party crushed, and under the power of their enemy; a party who have not been able to support themselves or their cause, how shall they support and defend him when he comes? And if they cannot be in a posture to defend and maintain him when they have him, how shall he be encouraged to venture himself among them? To come over and make the attempt here according to his just claim and the laws of the land, would be indeed his advantage, if there was a probability that he should succeed; otherwise the example of the king of Poland is sufficient to warn him against venturing while the nation is divided, and together by the ears, as they are here. The whole kingdom of Poland, we see, could not defend King Augustus against the Swedes and their pretender; but though he had the majority, and was received as king over the whole kingdom, yet it being a kingdom divided into factions and parties, and those parties raging with bitter envy and fury one against another, even just as ours do here, what came of it but the ruin of King Augustus, who was as it were a prisoner in his own court, and was brought to the necessity of abdicating the crown of Poland, and of acknowledging the title of the pretender to that crown. Now, what can the elector of Hanover expect, if he should make the attempt here while we are in this divided factious condition,—while the pretender, backed by his party at home, shall also have the whole power of France to support him, and place him upon the throne?

Let us but look back to a time when the very same case almost fell out in this nation; the same many ways it was, that is, in the case of Queen Mary I., your bloody papist persecuting Queen Mary and the Lady Jane Dudley, or Grey. The late King Edward VI. had settled the protestant succession upon the Lady Jane; it was received universally as the protestant succession is now. The reasons which moved the people to receive it were the same, *i.e.*, the safety of the protestant religion, and the liberties and properties of the people; all the great men of King Edward's court and council came readily into this succession, and gave their oaths, or what was in those days (whatsoever it may be now) thought equal to an oath, *viz.*, their honour, for the standing

by the successor in her taking possession of her said just right. Mary, daughter of Catherine of Spain, was the pretender; her mother was abdicated (so we call it in this age), repudiated, they called it, or divorced. Her daughter was adjudged illegitimate or spurious, because the marriage of her mother was esteemed unlawful; just as our pretender is by this nation suggested spurious, by reason of the yet unfolded mysteries of his birth. Again, that pretender had the whole power of Spain, which was then the most dreaded of any in the world, and was just what the French are now, viz., the terror of Europe. If Queen Mary was to have the crown, it was allowed by all that England was to be governed by Spanish councils, and Spanish maxims, Spanish money, and Spanish cruelty. Just as we say now of the pretender, that if he was to come in we shall be all governed by French maxims, French councils, French money, and French tyranny. In these things the pretender (Mary) at that time was the parallel to our pretender now, and that with but very little difference. Besides all this, she was a papist, which was directly contrary to the pious design of King Edward in propagating the reformation. Exactly agreeing these things were with our succession, our pretender, our King William, and his design, by settling the succession for the propagating the revolution, which is the reformation of this day, as the reformation was the revolution of that day. After this formal settling of the succession the king (as kings and queens must) dies, and the lords of the council, as our law calls them, they were the same thing, suppose lords justices, they meet and proclaim their protestant successor, as they were obliged to do; and what followed? Had they been unanimous, had they stuck to one another, had they not divided into parties, high and low, they had kept their protestant successor in spite of all the power of Spain, but they fell out with one another; high protestants against low protestants! and what was the consequence? One side to ruin the other brought in the pretender upon them, and so Spanish power, as it was predicted, came in upon them, and devoured them all. Popery came in, as they feared, and all went to ruin; and what came of the protestant successor? Truly they brought her to ruin. For first bringing her in, and then, by reason of their own strife and divisions, not being able to maintain her in the possession of that crown, which at their request

she had taken, she fell into her enemies' hand, was made a sacrifice to their fury, and brought to the block. What can be a more lively representation of our case now before us? He must have small sense of the state of our case, I think, who in our present circumstances can desire the Hanover succession should take place. What! would you bring over the family of Hanover to have them murdered? No, no, those that have a true value for the house of Hanover, would by no means desire them to come hither, or desire you to bring them on such terms; first let the world see you are in a condition to support and defend them, that the pretender, and his power and alliances of any kind, shall not disperse and ruin him and you together; first unite and put yourselves into a posture that you may defend the succession, and then you may have it; but as it stands now, good folks, consider with yourselves what prince in Europe will venture among us, and who that has any respect or value for the house of Hanover can desire them to come hither.

These are some good reasons why the succession of the house of Hanover should not be our present view. Another reason may be taken from the example of the good people in the days of King Edward VI. They were very good, religious people, that must be allowed by all sides, and who had very great zeal for the protestant religion and the reformation, as it was then newly established among them; and this zeal of theirs appeared plainly in a degree we can scarce hope for among the protestants of this age, viz., in their burning for it afterwards; yet such was their zeal for the hereditary right of their royal family, that they chose to fall into the hands of Spanish tyranny, and of Spanish popery, and let the protestant religion and the hopes of its establishment go to the d—l, rather than not have the right line of their princes kept up, and the eldest daughter of their late King Henry come to the crown. Upon this principle they forsook their good reforming King Edward's scheme, rejected the protestant succession, and they themselves, protestants, sincere protestants, such as afterwards died at a stake for their religion, the protestant religion; yet they brought in the pretender according to their principles, and run the risk of what could follow thereupon. Why should we think it strange, then, that protestants now in this age, and Church of England protestants too, should be for a popish pretender? No

doubt but they may be as good protestants as the Suffolk men in Queen Mary's time were, and if they are brought to it, will go as far, and die at a stake for the protestant religion, and in doing this, no doubt, but it is their real prospect to die at a stake, or they would not do it to be sure. Now the protestant religion, the whole work of reformation, the safety of the nation, both as to their liberties and religion, the keeping out French or Spanish popery, the dying at a stake, and the like, being always esteemed things of much less value than the faithful adhering to the divine rule of keeping the crown in the right line, let any true protestant tell me, how can we pretend to be for the Hanover succession? It is evident that the divine hereditary right of our crown is the main great article now in debate. You call such a man the pretender, but is he not the son of our king? And if so, what is the protestant religion to us? Had we not much better be papists than traitors? Had we not much better deny our God, our baptism, our religion, and our lives, than deny our lawful prince, our next male in a right line? If popery comes, passive obedience is still our friend; we are protestants; we can die, we can burn, we can do anything but rebel; and this being our first duty, viz., to recognise our rightful sovereign, are we not to do that first? And if popery or slavery follow, we must act as becomes us. This being then orthodox doctrine, is equally a substantial reason why we should be against the Hanover succession.

There may be sundry other reasons given why we should not be for this new establishment of the succession, which, though perhaps they may not seem so cogent in themselves, have yet a due force, as they stand related to other circumstances, which this nation is at present involved in, and therefore are only left to the consideration of the people of these times. No question but every honest Briton is for a peaceable succession; now, if the pretender comes, and is quietly established on the throne, why then you know there is an end of all our fears of the great and formidable power of France; we have no more need to fear an invasion, or the effects of leaving France in a condition by the peace to act against us; and put the pretender upon us; and therefore, peace being of so much consequence to this nation, after so long and so cruel a war, none can think of entering upon a new war for the succession without great regret and horror. Now,

it cannot be doubted but the succession of Hanover would necessarily involve us again in a war against France, and that perhaps when we may be in no good case to undertake it, for these reasons:—1. Perhaps some princes and states in the world by that time, seeing the great increase and growth of French power, may think fit to change their sentiments, and rather come over to that interest for want of being supported before, than be willing to embark against France, and so it may not be possible to obtain a new confederacy in the degree and extent of it, which we have seen it in, or in any degree suitable to the power of France; and if so, there may be but small hopes of success in case of a new rupture; and any war had better be let alone than be carried on to loss, which often ends in the overthrow of the party or nation who undertake it, and fails in the carrying it on. 2. France itself, as well by the acquisition of those princes who may have changed sides, as above, as by a time for taking breath after the losses they have received, may be raised to a condition of superior strength, and may be too much an overmatch for us to venture upon; and if he thinks fit to send us the person we call the pretender, and order us to take him for our king, and this when we are in no condition to withstand him, prudence will guide us to accept of him; for all people comply with what they cannot avoid; and if we are not in a condition to keep him out, there wants very little consultation upon the question, whether we shall take him in, or no? Like this is a man, who being condemned to be hanged, and is in irons in the dungeon at Newgate, when he sees no possibility either of pardon from the queen, or escape out of prison, what does he resolve upon next? What! why he resolves to die. What should he resolve on? Everybody submits to what they cannot escape. People! people! if ye cannot resist the French king, ye must submit to a French pretender. There is no more to be said about that. 3. Then some allies, who it might be thought would be able to lend you some help in such a case as this is, may pretend to be disgusted at former usage, and say they were abandoned and forsaken in their occasion by us, and they will not hazard for a nation who disobliged them so much before, and from whom they have not received suitable returns for the debt of the revolution. And if these nations should take things so ill as to refuse their aid and assistance in a case of so much necessity as that of the suc-

cession, how shall we be able to maintain that attempt? And, as before, an attempt of that, or any other kind like that, is better unmade than ineffectually made. 4. Others add a yet farther reason of our probable inability in such a case, viz., that the enemies of Britain have so misrepresented things to some of the neighbouring nations, our good friends and allies, as if we Britons had betrayed the protestant interest, and not acted faithfully to our confederacies and alliances, in which our reputation, it is pretended, has suffered so much, as not to merit to be trusted again in like cases, or that it should be safe to depend upon our most solemn engagements. This, though it is invidious and harsh, yet if there may be any truth in it, as we hope there is not, may be added as a very good reason, why, after this war is over, we may be in no good case at all to undertake or to carry on a new war in defence of the new protestant succession, when it may come to be necessary so to do. Since, then, the succession of Hanover will necessarily involve us in a new war against France, and for the reasons above, if they are allowed to be good reasons, we may not be in a condition to carry on that war, is not this a good reason why we should not in our present circumstances be for that succession? Other reasons may be taken from the present occasion the nation may lie under of preserving and securing the best administration of things that ever this nation was under in many ages; and if this be found to be inconsistent with the succession of Hanover, as some feign, it is hoped none will say but we ought to consider what we do; if the succession of Hanover is not consistent with these things, what reason have we to be for the said succession, till that posture of things be arrived when that inconsistency may be removed? And now, people of Britain! be your own judges upon what terms you can think it reasonable to insist any longer upon this succession. I do not contend that it is not a lawful succession, a reasonable succession, an established succession, nay, a sworn succession; but if it be not a practicable succession, and cannot be a peaceable succession; if peace will not bring him in, and war cannot, what must we do? It were much better not to have it at all, than to have it and ruin the kingdom, and ruin those that claim it at the same time.

But yet I have other reasons than these, and more cogent ones; learned men say, some diseases in nature are cured by

antipathies, and some by sympathies; that the enemies of nature are the best preservatives of nature; that bodies are brought down by the skill of the physician that they may the better be brought up, made sick to be made well, and carried to the brink of the grave in order to be kept from the grave; for these reasons, and in order to these things, poisons are administered for physic; or amputations in surgery, the flesh is cut that it may heal; an arm laid open that it may close with safety; and these methods of cure are said to be the most certain as well as most necessary in those particular cases, from whence it is become a proverbial saying in physic, desperate diseases must have desperate remedies. Now it is very proper to inquire in this case whether the nation is not in such a state of health at this time, that the coming of the pretender may not be of absolute necessity, by way of cure of such national distempers which now afflict us, and that an effectual cure can be wrought no other way? If upon due inquiry it should appear that we are not fit to receive such a prince as the successor of the house of Hanover is, that we should maltreat and abuse him if he were here, and that there is no way for us to learn the true value of a protestant successor so well as by tasting a little what a popish pretender is, and feeling something of the great advantages that may accrue to us by the superiority of a Jacobite party; if the disease of stupidity has so far seized us that we are to be cured only by poisons and fermentations; if the wound is mortified, and nothing but deep incisions, amputations, and desperate remedies must be used; if it should be necessary thus to teach us the worth of things by the want of them; and there is no other way to bring the nation to its senses; why, what can be then said against the pretender? Even let him come that we may see what slavery means, and may inquire how the chains of French galleys hang about us, and how easy wooden shoes are to walk in; for no experience teaches so well as that we buy dearest, and pay for with the most smart.

I think this may pass for a very good reason against the protestant succession; nothing is surer than that the management of King Charles II. and his late brother, were the best ways the nation could ever have taken to bring to pass the happy revolution; yet these afflictions to the island were not joyous, but grievous, for the time they remained, and the poor kingdoms suffered great convulsions; but what weighs

that if these convulsions are found to be necessary to a cure? If the physicians prescribe a vomit for the cure of any particular distemper, will the patient complain of being made sick? No, no; when you begin to be sick, then we say, Oh, that is right, and then the vomit begins to work; and how shall the island of Britain spew out all the dregs and filth the public digesture has contracted, if it be not made sick with some French physic? If you give good nourishing food upon a foul stomaeh, you cause that wholesome food to turn into filth, and instead of nourishing the man, it nourishes diseases in the man, till those diseases prove his destruction, and bring him to the grave. In like manner, if you will bring the protestant successor into the government before that government have taken some physic to cleanse it from the ill digesture it may have been under, how do we know but the diseases which are already begun in the constitution may not be nourished and kept up, till they may hereafter break out in the days of our posterity, and prove mortal to the nation. Wherefore should we desire the protestant successor to come in upon a foot of high-flying menage, and be beholden for their establishment to those who are the enemies of the constitution? Would not this be to have in time to come the successors of that house be the same thing as the ages passed have already been made sick of, and made to spew out of the government? Are not any of these considerations enough to make any of us averse to the protestant succession? No, no; let us take a French vomit first, and make us sick, that we may be well, and may afterwards more effectually have our health established.

The pretender will no doubt bring us good medicines, and cure us of all our hypochondriac vapours that now make us so giddy. But, say some, he will bring popery in upon us; popery, say you! alas! it is true, popery is a sad thing, and that, say some folk, ought to have been thought on before now; but suppose then this thing called popery! How will it come in? Why, say the honest folk, the pretender is a papist, and if a popish prince come upon the throne we shall have popery come in upon us without fail. Well, well, and what hurt will this be to you? May not popery be very good in its kind? What if this popery, like the vomit made of poison, be the only physic that can cure you? If this vomit make you spew out your filth, your tory filth, your

idolatrous filth, your tyrannic filth, and restore you to your health, shall it not be good for you? Where pray observe in the allegory of physic; you heard before when you take a vomit, the physic given you to vomit is always something contrary to nature, something that if taken in quantity would destroy; but how does it operate? It attacks nature, and puts her upon a ferment to cast out what offends her; but remark it, I pray, when the patient vomits, he always vomits up the physic and the filth together; so, if the nation should take a vomit of popery, as when the pretender comes most certain it is that this will be the consequence, they will vomit up the physic and the filth together; the popery and the pretender will come all up again, and all the popish, arbitrary, tyrannical filth, which has offended the stomach of the nation so long, and ruined its digesture, it will all come up together; one vomit of popery will do us all a great deal of good, for the stomach of the constitution is marvellous foul. Observe, people! this is no new application; the nation has taken a vomit of this kind before now, as in Queen Mary I.'s time; the reformation was not well chewed, and being taken down whole, did not rightly digest, but left too much crudity in the stomach, from whence proceeded ill nourishment, bad blood, and a very ill habit of body in the constitution; witness the distemper which seized the Gospellers in Suffolk, who being struck with an epilepsy or dead palsy in the better half of their understanding, to wit, the religious and zealous part, took up arms for a popish pretender, against the protestant successor, upon the wild-headed whimsey of the right line being *jure divino*. Well, what followed, I pray? Why, they took a vomit of popery; the potion indeed was given in a double vehicle, viz., of fagots a little inflamed, and this worked so effectually, that the nation having vomited, brought up all the filth of the stomach, and the foolish notion of hereditary right, spewed out popery also along with it. Thus was popery, and fire and fagot, the most effectual remedy to cure the nation of all its simple diseases, and to settle and establish the protestant reformation; and why then should we be so terrified with the apprehensions of popery? Nay, why should we not open our eyes and see how much to our advantage it may be in the next reign to have popery brought in, and to that end the pretender set up, that he may help us to this most useful dose of physic? These are some other of

my reasons against the protestant succession; I think they cannot be mended; it may perhaps be thought hard of that we should thus seem to make light of so terrible a thing as popery, and should jest with the affair of the protestants; no, people! no; this is no jest,—taking physic is no jest at all; for it is useful many ways, and there is no keeping the body in health without it; for the corruption of politic constitutions are as gross and as fatal as those of human bodies, and require as immediate application of medicines. And why should you people of this country be so alarmed, and seem so afraid of this thing called popery, when it is spoken of in intelligible terms, since you are not afraid alternately to put your hands to those things which as naturally tend in themselves to bring it upon you, as clouds tend to rain, or smoke to fire; what does all your scandalous divisions, your unchristian quarrellings, your heaping up reproaches, and loading each other with infamy, and with abominable forgeries, what do these tend to but to popery? If it should be asked how have these any such reference? the question is most natural from the premises. If divisions weaken the nation; if whig and tory, even united, are, and have been, weak enough to keep out popery, surely then widening the unnatural breaches, and inflaming things between them to implacable and irreconcilable breaches, must tend to overthrow the protestant kingdom, which, as our ever blessed Saviour said, *when divided against itself cannot stand*. Besides, are not your breaches come up to that height already as to let any impartial bystander see that popery must be the consequences? Do not one party say openly, they had rather be papists than presbyterians; that they would rather go to mass than to a meeting-house; and are they not to that purpose, all of them who are of that height, openly joined with the jacobites in the cause of popery? On the other hand, are not the presbyterians in Scotland so exasperated at having the abjuration oath imposed upon them, contrary, as they tell us, to their principles, that they care not if he, or any else, would come now and free them from that yoke? What is all this but telling us plainly that the whole nation is running into popery and the pretender? Why then, while you are obliquely, and by consequences, joining your hands to bring in popery, why, O distracted folk! should you think it amiss to have me talk of doing it openly and avowedly? Better is

open enmity than secret guile ; better is it to talk openly, and profess openly, for popery, that you may see the shape and real picture of it, than pretend strong opposition of it, and be all at the same time putting your hands to the work, and pulling it down upon yourselves with all your might.

But here comes an objection in our way, which, however weighty, we must endeavour to get over, and this is, what becomes of the abjuration? If the pretender comes in we are all perjured, and we ought to be all unanimous for the house of Hanover, because we are all perjured if we are for the pretender. Perjured, say ye! Ha! why, do all these people say we are perjured already? Nay, one, two, three, or four times? What signify oaths and abjurations in a nation where the parliament can make an oath to-day, and punish a man for keeping it to-morrow! Besides, taking oaths without examination, and breaking them without consideration, hath been so much a practice, and the date of its original is so far back, that none, or but very few, know where to look for it; nay, have we not been called in the vulgar dialect of foreign countries “the swearing nation”? Note, we do not say the forsworn nation; for whatever other countries say of us, it is not meet we should say so of ourselves; but as to swearing and forswearing, associating and abjuring, there are very few without sin to throw the first stone, and therefore we may be the less careful to answer in this matter: it is evident that the friends of the pretender cannot blame us; for have not the most professed jacobites all over the nation taken this abjuration? Nay, when even in their hearts they have all the while resolved to be for the pretender? Not to instance in the swearing in all ages to and against governments, just as they were or were not, in condition to protect us, or keep others out of possession; but we have a much better way to come off this than that, and we doubt not to clear the nation of perjury, by declaring the design, true intent, and meaning of the thing itself; for the good or evil of every action is said to lie in the intention; if then we can prove the bringing in the pretender to be done with a real intention and sincere desire to keep him out, or, as before, to spew him out; if we bring in popery with an intention and a sincere design to establish the protestant religion; if we bring in a popish prince with a single design the firmer and better to fix and introduce the protestant Hanover

succession ; if, I say, these things are the true intent and meaning, and are at the bottom of all our actions in this matter, pray how shall we be said to be perjured, or to break in upon the abjuration, whose meaning we keep, whatever becomes of the literal part of it. Thus we are abundantly defended from the guilt of perjury, because we preserve the design and intention upright and entire for the house of Hanover ; though as the best means to bring it to pass we think fit to bring in popery and the pretender : but yet farther, to justify the lawfulness and usefulness of such kind of methods, we may go back to former experiments of the same case, or like cases, for nothing can illustrate such a thing so aptly, as the example of eminent men who have practised the very same things in the same or like cases, and more especially when that practice has been made use of by honest men in an honest cause, and the end been crowned with success. This eminent example was first put in practice by the late famous Earl of Sunderland, in the time of King James II., and that too in the case of bringing popery into England, which is the very individual article before us. This famous politician, if fame lies not, turned papist himself, went publicly to mass, advised and directed all the forward rash steps that King James afterwards took towards the introducing of popery into the nation ; if he is not slandered, it was he advised the setting up of popish chapels and mass-houses in the city of London, and in the several principal towns of this nation ; the invading the right of corporations, courts of justice, universities, and, at last, the erecting the high commission court, to sap the foundations of the church ; and many more of the arbitrary steps which that monarch took for the ruin of the protestant religion, as he thought, were brought about by this politic earl, purely with design, and as the only effectual means to ruin the popish schemes, and bring about the establishment of the protestant religion by the revolution ; and, as experience after made it good, he alone was in the right, and it was the only way left, the only step that could be taken, though at first it made us all of the opinion the man was going the ready way to ruin his country, and that he was selling us to popery and Rome. This was exactly our case ; the nation being sick of a deadly, and otherwise incurable disease, this wise physician knew that nothing but a medicine made up of deadly poison, that

should put the whole body into convulsions, and make it cast up the dregs of the malady, would have any effect; and so he applied himself accordingly to such a cure; he brought on popery to the very door; he caused the nation to swallow as much of it as he thought was enough to make her as sick as a horse, and then he foresaw she would spew up the disease and the medicine together; the potion of popery he saw would come up with it, and so it did. If this be our case now, then it may be true that bringing the pretender is the only way to establish the protestant succession; and upon such terms, and such only, I declare myself for the pretender. If any sort of people are against the succession of the house of Hanover on any other accounts, and for other reasons, it may not be amiss to know some of them, and a little to recommend them to those who have a mind to be for him, but well know not wherefore or why they are so inclined. 1. Some being instructed to have an aversion to all foreign princes or families, are against the succession of the princes of Hanover, because, as they are taught to say, they are Dutchmen; now, though it might as well be said of the pretender that he is a Frenchman, yet that having upon many accounts been made more familiar to them of late, and the name of a Dutch king having a peculiar odium left upon it, by the grievances of the late King William's reign, they can by no means think of another Dutch succession without abhorrence; nay, the aversion is so much greater than their aversions to popery, that they can with much more satisfaction entertain the notion of a popish French pretender than of the best protestant in the world, if he hath anything belonging to him that sounds like a Dutchman; and this is some people's reason against the Hanover succession; a reason which has produced various effects in the world since the death of that prince, even to creating national antipathies in some people to the whole people of Holland, and to wish us involved in a war with the Dutch without any foundation of a quarrel with them, or any reason for those aversions; but these things opening a scene which relates to things farther back than the subject we are now upon, we omit them here for brevity sake, and to keep more closely to the thing in hand at this time. Others have aversions to the Hanover succession as it is the effect of the revolution, and as it may reasonably be supposed to favour such principles as the revolution was brought about

by, and has been the support of, viz., principles of liberty, justice, rights of parliaments, the people's liberties, free possession of property, and such like; these doctrines, a certain party in this nation have always to their utmost opposed, and have given us reason to believe they hate and abhor them, and for this reason they cannot be supposed to appear forward for the Hanover succession; to these principles have been opposed the more famous doctrines of passive obedience, absolute will, indefeasible right, the *jus divinum* of the line of princes, hereditary right, and such like; these, as preached up by that eminent divine, Dr. Henry Sacheverell, are so much preferable to the pretences of liberty and constitution, the old republican notions of the whigs, that they cannot but fill these people with hatred against all those that would pretend to maintain the foundation we now stand upon, viz., the revolution; and this is their reason against the Hanover succession, which they know would endeavour to do so.

Come we in the conclusion of this great matter to one great and main reason, which they say prevails with a great part of the nation at this time to be for the pretender, and which many subtle heads and industrious hands are now busily employed all over the kingdom to improve in the minds of the common people, this is the opinion of the legitimacy of the birth of the pretender; it seems, say these men, that the poor commons of Britain have been all along imposed upon to believe that the person called the pretender was a spurious birth, a child fostered upon the nation by the late king and queen; this delusion was carried on, say they, by the whigs in King William's time, and a mighty stir was made of it to possess the rabbles in favour of the revolution, but nothing was ever made of it; King William, say they, promised in his declaration to have it referred to the decision of the English parliament, but when he obtained the crown he never did anything that way more than encourage the people to spread the delusion by scurrilous pamphlets to amuse the poor commons; have them take a thing for granted which could have no other thing made of it; and so the judging of it in parliament was made a sham only; and the people drinking in the delusion, as they who were in the plot desired, it has passed ever since as if the thing had been sufficiently proved. Now upon a more sedate considering the matter, say they, the case is clear that this person is the real

son of King James, and the favourers of the revolution go now upon another foundation, viz., the powers of parliaments to limit the succession; and that succession being limited upon King James's abdication, which they call voluntary; so that now, say they, the question about the legitimacy of the person called the pretender is over, and nothing now is to be said of it; that he is the son of King James, there is, say they, no more room to doubt, and therefore the doctrine of hereditary right taking place, as the ancient professed doctrine of the Church of England, there can be no objection against his being our lawful king; and it is contrary to the said Church of England doctrine to deny it. This, then, is the present reason which the poor ignorant people are taught to give why they are against the protestant succession, and why they are easily persuaded to come into the new scheme of a popish pretender, though at the same time they are all heartily against popery as much as ever.

It becomes necessary now to explain this case a little to the understanding of the common people, and let them know upon what foundation the right of these two parties is founded, and if this be done with plainness and clearness, as by the rights and laws of Englishmen and Britons appertaineth, the said commons of Britain may soon discover whether the succession of the house of Hanover, or the claim of the person called the pretender, is founded best, and which they ought to adhere unto. The first thing it seems to be made clear to the common people is, whether the pretender was the lawful son of King James, yea, or no? And why the contrary to this was not made appear, according to the promises which, they say, though falsely, were made by the late King William? In the first place is to be considered, that the declaration of the said king, when P. of O. putting the said case in the modestest manner possible, had this expression, That there were violent suspicions that the said person was not born of the queen's body, and that the prince resolved to leave the same to the free parliament, to which throughout the said declaration the said prince declared himself ready to refer all the grievances which he came over to redress. I shall give you this in the words of a late learned author upon that head.

That before a free parliament could be obtained, King James withdrew himself, and carried away his pretended son

into the hands of the ancient enemies of this nation, and of our religion, viz., the French, there to be educated in the principles of enmity to this his native country.

By which action he not only declined to refer the legitimacy of his said son to the examination of the parliament, as the Prince of Orange had offered in his said declaration, but made such examination altogether useless and impracticable, he himself (King James) not owning it to be a legal parliament, and therefore not consenting to stand by such examination.

By the said abdication, and carrying away his said pretended son into the hands of the French to be educated in popery, &c., he gave the parliament of England and Scotland abundant reason for ever to exclude the said King James and his said pretended son from the government of these realms, or from the succession to the same, and made it absolutely necessary for them to do so, if they would secure the protestant religion to themselves and their posterity; and this without any regard to the doubt, whether he was the lawful son of King James, or no, since it is inconsistent with the constitution of this protestant nation to be governed by a popish prince.

The proof of the legitimacy being thus stated, and all the violent suspicions of his not being born of the queen being thus confirmed by the abdication of King James, come we next to examine how far this abdication could forfeit for this pretender, supposing him to be the real son of King James; this returns upon the right of the parliament to limit the succession, supposing King James had had no son at all; if the abdication be granted a lawfully making the throne vacant, it will be very hard to assign a cause why the parliament might not name a successor while the father was alive, whose right had no violent suspicions attending it, and not why they might not name a successor though the son was living; that the father's abdication forfeited for the son is no part of the question before us; for the father is not said to forfeit his right at all; no one ever questioned his right to reign, nor, had he thought fit to have stayed, could the parliament have named a successor, unless, as in the case of Richard II., he had made a voluntary resignation or renunciation of the crown, and of his people's allegiance; but the king having voluntarily abdicated the throne, this was as

effectual a releasing his subjects from their allegiance to him, as if he had read an instrument of resignation, just as King Richard did; all the articles of such a resignation were naturally contained in the said abdication, except the naming the successor, as effectually as if they had been at large repeated; and since the resigning the crown has been formerly practised in England, and there is so eminent an example in our English history of the same, it will questionless be of use to the reader of these sheets to have the particulars of it before his eyes, which for that purpose is here set down at large, as it was done in the presence of a great number of English peers, who attended the king for that purpose, and is as follows:—

In the name of God, Amen. I Richard, by the grace of God, King of England and France, and Lord of Ireland, do hereby acquit and discharge all Archbishops, Bishops, Dukes, Marquisses, and Earls, Barons, Lords, and all other my subjects, both spiritual and secular, of what degree soever, from their oath of fealty and homage, and all other bonds of allegiance, to me due from them and their heirs, and do hereby release them from the said oath and allegiance, so far as they concern my person, for ever.

I also resign all my kingly majesty and dignity, with all the rights and privileges thereunto belonging, and do renounce all the title and claim which I ever had, or have, to them. I also renounce the government of the said kingdom, and the name and royal highness thereunto belonging, freely and wholly, and swearing upon the Evangelists that I will never oppose this my voluntary resignation, nor suffer it to be opposed, as judging myself not unworthily deposed from my regal dignity for my deserts.

This resignation being read again in parliament, they grounded the deposing King Richard upon it, and declared him accordingly deposed, that is, declared the throne vacant; and immediately, by virtue of their own undoubted right of limiting the succession, named the successor. See the form in the history of that time, thus:—

That the throne was vacant by the voluntary cession and just deposition of King Richard II., and that therefore, according to their undoubted power and right so to do, they ought forthwith to the naming a successor to fill the said throne, which they forthwith did, by naming and proclaiming Henry, Duke of Lancaster, to be king, &c.

See the history of the kings of England, vol. fol. 287.

This was the same thing with King James's abdication, and King James's abdication was no less or more than an effectual resignation in form; now the parliament, upon the resignation of the crown by the king, having a manifold and manifest right to supply the throne so become vacant, had no obligation to regard the posterity of the abdicated prince, so far as any of them are concerned in, or involved by, the said abdication, and therefore considered of establishing and limiting the succession, without mentioning the reasons of the descent, having the reasons in themselves; but suppose the son of King James had been allowed legitimate, yet as the father had involved him in the same circumstances with himself, by first carrying him out of the kingdom, and afterwards educating him in the popish religion, he became abdicated also with his father; neither doth the being voluntary or not voluntary alter the case in the least, since in the laws of England a father is allowed to be able to forfeit for himself and for his children, and much more may he make a resignation for himself and his children, as is daily practised and allowed in law in the cutting off entails and remainders, even when the heir entail is in being, and under age. The people of Britain ought not then to suffer themselves to be imposed upon in such a case; for though the pretender were to be owned for the lawful son of King James, yet the abdication of King James his father, and especially his own passive abdication, was as effectual an abdication in him as if he had been of age, and done it voluntarily himself, and shall be allowed to be as binding in all respects in law as an heir in possession cutting off an heir entail. If this is not so, then was the settlement of the crown upon King William and Queen Mary unrighteous, and those two famous princes must be recorded in history for parricides and usurpers; nor will it end there, for the black charge must reach our most gracious sovereign, who must be charged with the horrible crimes of robbery and usurpation; and not the parliament or convention of the estates at the revolution only shall be charged as rebels and traitors to their sovereign, and breakers of the great command of rendering to Cæsar the things that are Cæsar's, but even every parliament since, especially those who have had any hand in placing the entail of the crown upon the person of the queen, and in confirming her majesty's possession thereof since her happy accession; and

every act of parliament settling the succession on the house of Hanover must have likewise been guilty of treason and rebellion in a most unnatural manner. This is a heavy charge upon her majesty, and very inconsistent with the great zeal and affection with which all the people of Britain at this time pay their duty and allegiance to her majesty's person, and acknowledge her happy government; this may indeed be thought hard, but it is evident nothing less can be the case, and therefore those people who are so forward to plead the pretender's cause, on account of his being King James's lawful son, can do it upon no other terms than these, viz., to declare that the queen is herself an illegal governor, an usurper of another's right, and therefore ought to be deposed; or, that the hereditary right of princes is no indefeasible thing, but is subjected to the power of limitations by parliament. Thus I think the great difficulty of the pretender's being the rightful son of the late King James is over, and at an end; that it is no part of the needful inquiry relating to the succession, since his father involved him in the fate of his abdication, and many ways rendered him incapable to reign, and out of condition to have any claim; since the power of limiting the succession to the crown is an undoubted right of the parliaments of England and of Scotland respectively. Moreover, his being educated a papist in France, and continuing so, was a just reason why the people of England rejected him, and why they ought to reject him, since, according to that famous vote of the commons in the convention parliament, so often printed, and so often on many accounts quoted, it is declared, That it is inconsistent with the constitution of this protestant kingdom to be governed by a popish prince. Vid. Votes of the Convention, Feb. 2nd, 1688. This vote was carried up by Mr. Hampden to the house of lords the same day as the resolution of all the commons of England. Now, this prince being popish, not only so in his infancy, but continuing so even now, when all the acts of Parliament in Britain have been made to exclude him, his turning protestant now, which his emissaries promise for him, though perhaps without his consent, will not answer at all; for the acts of parliament, or some of them, having been past while he, though of age, remained a papist, and gave no room to expect any other, his turning protestant cannot alter those laws, suppose he should do so; nor is it reasonable that

a nation should alter an established succession to their crown whenever he shall think fit to alter or change his religion; if to engage the people of Britain to settle the succession upon him, and receive him as heir, he had thought fit to turn protestant, why did he not declare himself ready to do so before the said succession was settled by so many laws, especially by that irrevocable law of the union of the two kingdoms, and that engagement of the abjuration, of which no human power can absolve us, no act of parliament can repeal it, nor no man break it without wilful perjury.

What, then, is the signification to the people of Britain whether the person called the pretender be legitimate, or no? The son of King James, or the son of a cinder-woman? The case is settled by the queen, by the legislative authority, and we cannot go back from it; and those who go about as emissaries to persuade the commons of Great Britain of the pretender having a right, go about at the same time traitorously to tell the queen's good subjects that her majesty is not our rightful queen, but an usurper.

AND

What if the Pretender should come?

OR SOME

CONSIDERATIONS

OF THE

ADVANTAGES

AND

REAL CONSEQUENCES

OF THE

PRETENDER'S

Possessing the

CROWN OF GREAT BRITAIN.

AND WHAT IF THE PRETENDER SHOULD COME?

OR SOME CONSIDERATIONS, &c.

IF the danger of the pretender is really so great as the noise which some make about it seems to suppose, if the hopes of his coming are so well grounded, as some of his friends seem to boast, it behoves us who are to be the subjects of the approaching revolution, which his success must necessarily bring with it, to apply ourselves seriously to examine what our part will be in the play, that so we may prepare ourselves to act as becomes us, both with respect to the government we are now under, and with respect to the government we may be under, when the success he promises himself shall (if ever it shall) answer his expectation.

In order to this it is necessary to state, with what plainness the circumstances of the case will admit, the several appearances of the thing itself. 1. As they are offered to us by the respective parties who are for or against it. 2. As they really appear by an impartial deduction from them both, without the least bias either to one side or other; that so the people of Britain may settle and compose their thoughts a little in this great, and at present popular, debate; and may neither be terrified nor affrighted with mischiefs, which have no reason nor foundation in them, and which give no ground for their apprehensions; and, on the other hand, may not promise to themselves greater things from the pretender, if he should come hither, than he will be able to perform for them. In order to this we are to consider the pretender in his person and in his circumstances. 1. The person who we call the pretender; it has been so much debated, and such strong parties have been made on both sides to prove or disprove the legitimacy of his birth, that it seems needless here to enter into that dispute; the author of the Review, one of the

most furious opposers of the name and interest of the pretender, openly grants his legitimacy, and pretends to argue against his admission from principles and foundations of his own forming; we shall let alone his principles and foundations here, as we do his arguments, and only take him by the nandle which he fairly gives us, viz., that he grants the person of the pretender legitimate; if this be so, if the person we contend about be the lawful true son of King James's queen, the dispute whether he be the real son of the king will be quite out of the question; because by the laws of Great Britain, and of the whole world, a child born in wedlock shall inherit, as heir of the mother's husband, whether begotten by him, as his real father, or not. Now to come at the true design of this work, the business is, to hear, as above, what either side have to say to this point. The friends of his birth and succession argue upon it thus, if the person be lawfully begotten, that is, if born really of the body of the queen dowager, during the life of King James, he was without any exception his lawful son; if he was his lawful son, he was his lawful heir; if he was his lawful heir, why is he not our lawful king? Since hereditary right is indefeasible, and is lately acknowledged to be so; and that the doctrine of hereditary right being indefeasible, is a Church of England doctrine ever received by the church, and inseparable from the true members of the church, the contrary being the stigmatizing character of republicans, king-killers, enemies to monarchy, presbyterians, and fanatics. The enemies of the birth and succession of the person called the pretender argue upon it thus, that he is the lawfully begotten, or son born really of the body of the queen dowager of the late King James, they doubt; and they are justified in doubting of it, because no sufficient steps were taken in the proper season of it, either before his birth, to convince such persons as were more immediately concerned, to know the truth of it, that the queen was really with child, which might have been done past all contradiction at that time, more than ever after; or at his birth, to have such persons as were more immediately concerned, such as her present majesty, &c., thoroughly convinced of the queen being really delivered of a child, by being present at the time of the queen's labour and delivery. This being omitted, which was the affirmative, say they, which ought to have been proved, we ought not to be concerned in

the proof of the negative, which by the nature of the thing could not be equally certain; and therefore we might be justly permitted to conclude that the child was a spurious, unfair production, put upon the nation; for which reason we reject him, and have now, by a legal and just authority, deposed his father and him, and settled the succession upon the house of Hanover, being protestants.

The matter of his title standing thus, divides the nation into two parties, one side for, and the other against the succession, either of the pretender, or the house of Hanover, and either side calling the other the pretender; so that if we were to use the party's language, we must say, one side is for, and the other side against, either of the pretenders; what the visible probabilities of either of these claims succeeding are, is not the present case; the nation appears at this time strangely agitated between the fears of one party, and the hopes of the other, each extenuating and aggravating, as their several parties and affections guide them, by which the public disorder is very much increased; what either of them have to allege is our present work to inquire; but more particularly what are the real or pretended advantages of the expected reign of him, who we are allowed to distinguish by the name of the pretender; for his friends here would have very little to say to move us to receive him, if they were not able to lay before us such prospects of national advantages, and such views of prosperity, as would be sufficient to prevail with those who have their eyes upon the good of their country, and of their posterity after them.

That then a case so popular, and of so much consequence as this is, may not want such due supports as the nature of the thing will allow, and especially since the advantages and good consequences of the thing itself are so many, and so easy to be seen as his friends allege; why should not the good people of Britain be made easy, and their fears be turned into peaceable satisfaction, by seeing that this devil may not be so black as he is painted; and that the noise made of the pretender, and the frightful things said of his coming, and of his being received here, may not be made greater scarecrows to us than they really are; and after all that has been said, if it should appear that the advantages of the pretender's succession are really greater to us, and the dangers less to us, than those of the succession of Hanover, then much of their diffi-

culties would be over, who, standing neuter as to persons, appear against the pretender, only because they are made to believe strange and terrible things of what shall befall the nation in case of his coming in, such as popery, slavery, French power, destroying of our credit, and devouring our funds (as that scandalous scribbler, the Review, has been labouring to suggest), with many other things which we shall endeavour to expose to you, as they deserve. If, we say, it should appear then that the dangers and disadvantages of the pretender's succession are less than those of the house of Hanover, who, because of an act of Parliament, you know must not be called pretenders, then there will remain nothing more to be said on that score, but the debate must be of the reasonableness and justice on either side, for their admittance; and there we question not but the side we are really pleading for will have the advantage.

To begin, then, with that most popular and affrighting argument now made use of, as the bugbear of the people, against several other things besides jacobitism, we mean French greatness. It is most evident that the fear of this must, by the nature of the thing, be effectually removed upon our receiving the pretender; the grounds and reasons why French greatness is rendered formidable to us, and so much weight supposed to be in it, that like the name of Scanderberg, we fright our very children with it, lie only in this, that we suggest the king of France being a professed enemy to the peace and the liberty of Great Britain, will most certainly, as soon as he can a little recover himself, exercise all that formidable power to put the pretender upon us, and not only to place him upon the throne of Great Britain, but to maintain and hold him up in it, against all the opposition, either of the people of Britain or the confederate princes leagued with the elector of Hanover, who are in the interest of his claim, or of his party. Now, it is evident, that upon a peaceable admitting this person, whom they call the pretender, to receive and enjoy the crown here, all that formidable power becomes your friend, and the being so must necessarily take off from it everything that is called terrible; forasmuch as the greater terror and amusement the power we apprehend really carries with it, the greater is the tranquillity and satisfaction which accrues to us, when we have the friendship of that power which was so formidable

to us before: the power of France is represented at this time very terrible, and the writers who speak of it apply it warm to our imaginations, as that from whence we ought justly to apprehend the impossibility of keeping out the pretender, and this, notwithstanding they allow themselves at the same time to suppose all the confederate powers of Europe to be engaged, as well by their own interest, as by the new treaties of barrier and guarantee, to support and to assist the claim of the elector of Hanover, and his party. Now, if this power be so great and so formidable, as they allege, will it not, on the other side, add a proportion of increase to our satisfaction, that this power will be wholly in friendship and league with us; and engaged to concern itself for the quieting our fears of other foreign invaders; forasmuch as having once concerned itself to set the person of the pretender upon the throne, it cannot be supposed but it shall be equally concerned to support and maintain him in that possession, as what will mightily conduce to the carrying on the other projects of his greatness and glory with the rest of Europe; in which it will be very much his interest to secure himself from any opposition he might meet with from this nation, or from such as might be rendered powerful by our assistance. An eminent instance we have of this in the mighty efforts the French nation have made for planting, and preserving when planted, a grandson of France upon the throne of Spain; and how eminent are the advantages to France from the success of that undertaking; of what less consequence then would it be to the august monarchy of France, to secure and engage to himself the constant friendship and assistance of the power of Great Britain, which he would necessarily do, by the placing this person upon the throne, who would thereby in gratitude be engaged to contribute his utmost in return to the king of France, for the carrying on his glorious designs in the rest of Europe. While, then, we become thus necessary to the king of France, reason dictates that he would be our fast friend, our constant confederate, our ally, firmly engaged to secure our sovereign, and protect our people from the insults and attempts of all the world; being thus engaged reciprocally with the king of France, there must necessarily be an end of all the fears and jealousies, of all the apprehensions and doubts, which now so amuse us, and appear so formidable to us from the prospect of the power and great-

ness of France; then we shall on the contrary say to the world, the stronger the king of France is, the better for the king of England; and what is best for the king, must be so for his people; for it is a most unnatural way of arguing, to suppose the interest of a king, and of his people, to be different from one another.

And is not this then an advantage incomparably greater to Britain, when the pretender shall be upon the throne, than any we can propose to ourselves in the present uneasy posture of affairs, which it must be acknowledged we are in now, when we cannot sleep in quiet, for the terrible apprehensions of being overrun by the formidable power of France.

Let us also consider the many other advantages which may accrue to this nation, by a nearer conjunction, and closer union with France, such as increase of commerce, encouragement of manufactures, balance of trade; every one knows how vast an advantage we reaped by the French trade in former times, and how many hundred thousand pounds a year we gained by it, when the balance of trade between us and France ran so many millions of livres annually *against* the French by the vast exportation of our goods to them, and the small import which we received from them again, and by the constant flux of money in specie, which we drew from them every year, upon court occasions, to the inexpressible benefit of the nation, and enriching of the subject, of which we shall have occasion to speak hereafter more fully.

In the meantime it were to be wished that our people who are so bugbeared with words, and terrified with the name of French, French power, French greatness, and the like, as if England could not subsist, and the queen of England was not able to keep upon her throne any longer than the king of France pleased, and that her majesty was going to be a mere servant to the French king, would consider that this is an unanswerable argument for the coming of the pretender, that we may make this so formidable prince our friend, have all his power engaged in our interest, and see him going on hand in hand with us, in the securing us against all sorts of encroachments whatsoever; for if the king of France be such an invincible mighty monarch, that we are nothing in his eyes or in his hands; and that neither Britain, or all the friends Britain can make, are able to deliver us from him; then it must be our great advantage to have the pretender be

our king, that we may be out of the danger of this formidable French power being our enemy ; and that, on the other hand, we may have so potent, so powerful, so invincible a prince be our friend. The case is evidently laid down to every common understanding, in the example of Spain ; till now, the Spaniards for many ages have been overrun and impoverished by their continued wars with the French, and it was not doubted but one time or other they would have been entirely conquered by the king of France, and have become a mere province of France ; whereas now, having but consented to receive a king from the hands of the invincible monarch, they are made easy as to the former danger they were always in, are now most safe under the protection of France ; and he who before was their terror, is now their safety, and being safe from him it appears they are so from all the world.

Would it not then be the manifest advantage of this nation to be likewise secured from the dangerous power of France, and make that potentate our fast friend, who it is so apparent we are not able to resist as an enemy ? This is reducing the French power the softest way, if not the best and shortest way ; for if it does not reduce the power itself, it brings it into such a circumstance, as that all the terror of it is removed, and we embrace that as our safety and satisfaction, which really is, and ought to be, our terror and aversion ; this must of necessity be our great advantage.

How strange is it that none of our people have yet thought of this way of securing their native country from the insults of France ? Were but the pretender once received as our king, we have no more disputes with the king of France, he has no pretence to invade or disturb us ; what a quiet world would it be with us in such a case, when the greatest monarch in the universe should be our fast friend, and be in our interest to prevent any of the inconveniences which might happen to us from the disgust of other neighbours, who may be dissatisfied with us upon other accounts. As to the terrible things which some people fright us, and themselves with, from the influence which French councils may have upon us, and of French methods of government being introduced among us ; these we ought to esteem only clamours and noise, raised by a party to amuse and affright us ; for pray let us inquire a little into them, and see if there be any reason for us to be so terrified at them ; suppose they were really what is alleged.

which we hope they are not; for example, the absolute dominion of the king of France over his subjects, is such, say our people, as makes them miserable; well, but let us examine then, are we not already miserable for want of this absolute dominion? Are we not miserably divided? Is not our government miserably weak? Are we not miserably subjected to the rabbles and mob? Nay, is not the very crown mobbed here every now and then, into whatever our sovereign lord the people demand? Whereas, on the contrary, we see France entirely united as one man; no virulent scribblers there dare affront the government; no impertinent p—ments there disturb the monarch with their addresses and representations; no superiority of laws restrain the administration; no insolent lawyers talk of the sacred constitution, in opposition to the more sacred prerogative; but all with harmony and general consent agree to support the majesty of their prince, and with their lives and fortunes; not in complimenting sham addresses only, but in reality, and effectually, support the glory of their great monarch. In doing this they are all united together so firmly, as if they had but one heart and one mind, and that the king was the soul of the nation: what if they are what we foolishly call slaves to the absolute will of their prince? That slavery to them is mere liberty? They entertain no notion of that foolish thing liberty, which we make so much noise about; nor have they any occasion of it, or any use for it if they had it; they are as industrious in trade, as vigorous in pursuit of their affairs, go on with as much courage, and are as well satisfied when they have wrought hard twenty or thirty years to get a little money for the king to take away, as we are to get it for our wives and children; and as they plant vines, and plough lands, that the king and his great men may eat the fruit thereof, they think it as great a felicity as if they eat it themselves. The badge of their poverty, which we make such a noise of, and insult them about so much, viz., their wooden shoes, their peasants make nothing of it; they say they are as happy in their wooden shoes, as our people are with their luxury and drunkenness; besides, do not our poor people wear iron shoes, and leather doublets, and where is the odds between them? All the business, forsooth, is this trifle we call liberty, which rather than be plagued with so much strife and dissension about it as we are, who would be

troubled with ; now, it is evident *the peace* and union which we should enjoy under the like methods of government here, which we hope for under the happy government of the pretender, must needs be a full equivalent for all the pretended rights and privileges which we say we shall lose ; and how will our rights and privileges be lost ? Will they not rather be centred in our common receptacle, viz., the sovereign, who is, according to the king of France's happy government, the common magazine of universal privilege, communicating it to, and preserving it for, the general use of his subjects, as their safety and happiness requires. Thus he protects their commerce, encourages their foreign settlements, enlarges their possessions abroad, increases their manufactures, gives them room for spreading their numerous race over the world ; at home he rewards arts and sciences, cultivates learning, employs innumerable hands in the labours of the state, and the like ; what if it be true that all they gain is at his mercy ? Does he take it away, except when needful, for the support of his glory and grandeur, which is their protection ? Is it not apparent, that under all the oppressions they talk so much of, the French are the nation the most improved and increased in manufactures, in navigation, in commerce, within these fifty years, of any nation in the world ? And here we pretend liberty, property, constitutions, rights of subjects, and such stuff as that, and with all these fine gewgaws, which we pretend propagate trade, and increase the wealth of the nation, we are every day declining, and become poor ; how long will this nation be blinded by their own foolish customs ? And when will they learn to know, that the absolute government of a virtuous prince, who makes the good of his people his ultimate end, and esteems their prosperity his glory, is the best, and most godlike, government in the world.

Let us then be no more rendered uneasy with the notions, that with the pretender we must entertain French methods of government, such as tyranny and arbitrary power ; tyranny is no more tyranny, when improved for the subjects' advantage : perhaps when we have tried it we may find it as much for our good many ways, nay, and more too, than our present exorbitant liberties, especially unless we can make a better use of them, and enjoy them, without being always going by the ears about them, as we see daily, not only with our governors, but even with one another ; a little French slavery, though it

be a frightful word among us, that is, being made so by custom, yet may do us a great deal of good in the main, as it may teach us not to over (under) value our liberties when we have them, so much as sometimes we have done; and this is not one of the least advantages which we shall gain by the coming of the pretender, and consequently one of the good reasons why we should be very willing to receive him.

The next thing which they fill us with apprehensions of in the coming of the pretender, is the influence of French councils, which they construe thus, viz., That the pretender being restored here by the assistance of France, will not only rule us by French methods, viz., by French tyranny, but in gratitude to his restorer he will cause us to be always ready with English blood and treasure to assist and support the French ambition in the invasions he will ever be making upon Europe, and in the oppressions of other nations; till at last he obtain the superiority over them all, and turn upon us too, devouring the liberties of Europe in his so long purposed and resolved universal monarchy. As to the gratitude of the pretender to the king of France, why should you make that a crime? Are not all people bound in honour to retaliate kindness? And would you have your prince be ungrateful to him that brought him hither? By the same rule, you would expect he could be ungrateful to us that receive him; besides, if it be so great an advantage to us to have him brought in, we shall be all concerned also in gratitude to the king of France for helping us to him; and sure we shall not decline making a suitable return to him for the kindness; and is this anything more than common? Did we not pay the Dutch six hundred thousand pounds sterling for assisting the late King William? And did we not immediately embark with them in the war against the king of France? And has not that revolution cost the nation one hundred millions of British money to support it? And shall we grudge to support the pretender and his benefactor, at the same expense, if it should be needful, for carrying on the new scheme of French liberty, which when that time comes may be in a likely and forward way to prevail over the whole world, to the general happiness of Europe.

There seems to be but one thing more which those people, who make such a clamour at the fears of the pretender, take hold of, and this is religion; and they tell us that not only

French government, and French influence, but French religion, that is to say, popery, will come upon us; but these people know not what they talk of, for it is evident that they shall be so far from being loaded with religion, that they will rather obtain that so long desired happiness, of having no religion at all. This we may easily make appear has been the advantage which has been long laboured for in this nation; and as the attainments we are arrived to of that kind are very considerable already, so we cannot doubt but that if once the pretender were settled quietly among us, an absolute subjection, as well of religious principles, as civil liberties, to the disposal of the sovereign, would take place. This is an advantage so fruitful of several other manifest improvements, that though we have not room in this place to enlarge upon the particulars, we cannot doubt but it must be a most grateful piece of news to a great part of the nation, who have long groaned under the oppressions and cruel severities of the clergy, occasioned by their own strict lives, and rigorous virtue, and their imposing such austerities and restraints upon the people; and in this particular the clamour of slavery will appear very scandalous in the nation, for the slavery of religion being taken off, and an universal freedom of vice being introduced, what greater liberty can we enjoy.

But we have yet greater advantages attending this nation by the coming of the pretender than any we have yet taken notice of; and though we have not room in this short tract to name them all, and enlarge upon them as the case may require, yet we cannot omit such due notice of them, as may serve to satisfy our readers, and convince them how much they ought to favour the coming of the pretender, as the great benefit to the whole nation; and therefore we shall begin with our brethren of Scotland; and here we may tell them, that they, of all the parts of this island, shall receive the most evident advantages, in that the setting the pretender upon the throne shall effectually set them free from the bondage they now groan under, in their abhorred subjection to England by the union, which may, no question, be declared void, and dissolved, as a violence upon the Scottish nation, as soon as ever the pretender shall be established upon the throne; a few words may serve to recommend this to the Scots, since we are very well satisfied we shall be sure to oblige every side there by it: the opposition all sides made to

the union at the time of the transaction of the union in the parliament there, cannot but give us reason to think thus ; and the present scruple, even the presbyterians themselves make, of taking the abjuration, if they do not, as some pretend, assure us that the said presbyterian nonjurors are in the interest of the pretender, yet they undeniably prove, and put it out of all question, that they are ill-pleas'd with the yoke of the union, and would embrace every just occasion of being quietly and freely discharged from the fetters which they believe they bear by the said union ; now there is no doubt to be made, but that upon the very first appearance of the pretender, the ancient kingdom of Scotland should recover her former well-known condition, we mean, of being perfectly free, and depending upon none but the king of France. How inestimable an advantage this will be to Scotland, and how effectually he will support and defend the Scots against their ancient enemies, the English, forasmuch as we have not room to enlarge upon here, we may take occasion to make out more particularly on another occasion. But it may not be forgotten here, that the union was not only justly distasteful to the Scots themselves, but also to many good men, and noble patriots of the church, some of whom entered their protests against passing and confirming, or ratifying the same, such as the late Lord Hav——sham, and the right wise and right noble E—— of Nott——, whose reasons for being against the said union, besides those they gave in the house of p——s, which we do by no means mean to reflect upon in the least in this place ; we say, whose other reasons for opposing the said union were founded upon an implacable hatred to the Scots kirk, which has been established thereby : it may then not admit of any question, but that they would think it a very great advantage to be delivered from the same, as they would effectually be by the coming of the pretender ; wherefore by the concurring judgment of these noble and wise persons, who on that account opposed the union, the coming of the pretender must be an inexpressible advantage to this nation ; nor is the dissolving the union so desirable a thing, merely as that union was an establishing among us a wicked schismatical presbyterian generation, and giving the sanction of the laws to their odious constitution, which we esteem (you know) worse than popery ; but even on civil accounts, as particularly on account

of the p——s of Scotland, who many of them think themselves egregiously maltreated, and robbed of their birthright, as p——s, and have expressed themselves so in a something public manner. Now we cannot think that any of these will be at all offended that all this new establishment should be revoked; nay, we have heard it openly said, that the Scots are so little satisfied with the union at this time, that if it were now to be put to the vote, as it was before, whether they should unite with England, or no, there would not be one man in fifteen, throughout Scotland, that would vote for it. If then it appears that the whole nation thus seems to be averse to the union, and by the coming in of this most glorious pretender that union will be in all appearance dissolved, and the nation freed from the incumbrance of it, will any Scots man, who is against the union, refuse to be for the pretender? Sure it cannot be; I know it is alleged, that they will lay aside their discontent at the union, and unite together against the pretender, because that is to unite against popery; we will not say what a few, who have their eyes in their heads, may do; but as the generality of the people there are not so well reconciled together, as such a thing requires, it is not unlikely that such a uniting may be prevented, if the pretender's friends there can but play the game of dividing them farther, as they should do; to which end it cannot but be very serviceable to them to have the real advantages of receiving the pretender laid before them, which is the true intent and meaning of the present undertaking.

But we have more and greater advantages of the coming of the pretender, and such as no question will invite you to receive him with great satisfaction and applause; and it cannot be unnecessary to inform you, for your direction in other cases, how the matter, as to real and imaginary advantage, stands with the nation in this affair; and First, the coming of the pretender will at once put us all out of debt. These abomination whigs, and these bloody wars, carried on so long for little or nothing, have, as is evident to our senses now, (whatever it was all along), brought a heavy debt upon the nation; so that if what a known author lately published is true, the government pays now almost six millions a year to the common people for interest of money; that is to say, the usurers eat up the nation, and devour six millions yearly; which is paid, and must be paid now for a long time, if some

kind turn, such as this of the coming of the pretender, or such like, does not help us out of it; the weight of this is not only great, insuperably great, but most of it is entailed for a terrible time, not only for our age, but beyond the age of our grandchildren, even for ninety-nine years; by how much the consideration of this debt is intolerable and afflicting to the last degree, by so much the greater must the obligation be to the person who will ease the nation of such a burden, and therefore we place it among the principal advantages which we are to receive from the admission of the pretender, that he will not fail to rid us of this grievance, and by methods peculiar to himself deliver us from so great a burden as these debts are now, and, unless he deliver us, are like to be to the ages to come; whether he will do this at once, by remitting most graciously to the nation the whole payment, and consequently take off the burden *brevi manu*, as with a sponge wiping out the infamous score, leaving it to fall as fate directs, or by prudent degrees, we know not, nor is it our business to determine it here; no doubt the doing it with a jerk, as we call it, *comme une coup de grace*, must be the most expeditious way; nay, and the kindest way of putting the nation out of its pain; for lingering deaths are counted cruel; and though *une coup d'eclat* may make an impression for the present, yet the astonishment is soonest over; besides, where is the loss to the nation in this sense? though the money be stopped from the subject on one hand, if it be stopped to the subjects on the other, the nation loses or gains nothing: we know it will be answered, that it is unjust, and that thousands of families will be ruined, because they who lose, will not be those who gain. But what is this to the purpose in a national revolution; unjust! alas! is that an argument? Go and ask the pretender! Does not he say you have all done unjustly by him? and since the nation in general loses nothing, what obligation has he to regard the particular injury that some families may sustain? And yet farther, is it not remarkable, that most part of the money is paid by the cursed party of whigs, who from the beginning officiously appeared to keep him from his right? And what obligation has he upon him to concern himself for doing them right in particular, more than other people? But to avoid the scandal of partiality, there is another thought offers to our view, which the nation is beholding to a particular author for

putting us in mind of; if it be unjust that we should suppose the pretender shall stop the payment on both sides, because it is doing the whigs wrong, since the tories, who perhaps being chiefly landed men, pay the most taxes; then, to keep up a just balance, he need only continue the taxes to be paid in, and only stop the annuities and interest which are to be paid out. Thus both sides having no reason to envy or reproach one another with hardships, or with suffering unequally; they may every one lose their proportion, and the money may be laid up in the hands of the new sovereign, for the good of the nation.

This being thus happily proposed, we cannot pass over the great advantages which would accrue to this nation in such a case, by having such a mass of money laid up in the exchequer at the absolute command of a most gracious French sovereign. But as these things are so glorious, and so great, as to admit of no complete explication in this short tract, give us leave, O people of Great Britain, to lay before you a little sketch of your future felicity, under the auspicious reign of such a glorious prince, as we all hope, and believe the pretender to be. 1. You are to allow, that by such a just and righteous shutting up of the exchequer in about seven years' time, he may be supposed to have received about forty millions sterling from his people, which not being to be found in specie in the kingdom, will, for the benefit of circulation, enable him to treasure up infinite funds of wealth in foreign banks, a prodigious mass of foreign bullion, gold, jewels, and plate, to be ready in the tower, or elsewhere, to be issued upon future emergency, as occasion may allow. This prodigious wealth will necessarily have these happy events, to the infinite satisfaction and advantage of the whole nation, and the benefit of which I hope none will be so unjust, or ungrateful, to deny. 1. It will for ever after deliver this nation from the burden, the expense, the formality, and the tyranny, of parliaments. No one can perhaps at the first view be rightly sensible of the many advantages of this article, and from how many mischiefs it will deliver this nation. 1. How the country gentlemen will be no longer harassed to come, at the command of every court occasion, and upon every summons by the prince's proclamation, from their families and other occasions, whether they can be spared from their wives, &c., or no, or whether they can trust their

wives behind them, or no; nay, whether they can spare money or no for the journey, or whether they must come carriage paid or no; then they will no more be unnecessarily exposed to long and hazardous journeys, in the depth of winter, from the remotest corners of the island, to come to London, just to give away the country's money, and go home again; all this will be dispensed with by the kind and gracious management of the pretender, when he, God bless us, shall be our more gracious sovereign. 2. In the happy consequence of the demise of parliaments, the country will be eased of that intolerable burden of travelling to elections, sometimes in the depth of winter, sometimes in the middle of their harvest, whenever the writs of elections arbitrarily summons them. 3. And with them the poor gentlemen will be eased of that abominable greivance of the nation, viz., the expense of elections, by which so many gentlemen of estates have been ruined, so many innocent people, of honest principles before, have been debauched, and made mercenary, partial, perjured, and been blinded with bribes to sell their country and liberties to who bids most. It is well known how often, and yet how in vain, this distemper has been the constant concern of parliaments for many ages, to cure, and to provide sufficient remedies for. Now if ever the effectual remedy for this is found out, to the inexpressible advantage of the whole nation; and this perhaps is the only cure for it that the nature of the disease will admit of; what terrible havock has this kind of trade made among the estates of the gentry, and the morals of the common people? 4. How also has it kept alive the factions and divisions of the country people, keeping them in a constant agitation, and in triennial commotions? So that what with forming new interests, and cultivating old, the heats and animosities never cease among the people. But once set the pretender upon the throne, and let the funds be but happily stopped, and paid into his hands, that he may be in no more need of a parliament, and all these distempers will be cured as effectually as a fever is cured by cutting off the head, or as a halter cures the bleeding at the nose. How infatuated then is this nation, that they should so obstinately refuse a prince, by the nature of whose circumstances, and the avowed principles of whose party, we are sure to obtain such glorious things, such inestimable advantages, things which no age, no prince, no attempt of

parties, or endeavour, though often aimed at of ministers of state, have ever been able to procure for us. 2. This amassing of treasure, by the stopping the funds on one hand, and the receiving the taxes on the other, will effectually enable the pretender to set up, and effectually maintain, that glorious, and so often-desired method of government, *au coup de canon, Anglice*, a standing army. This we have the authority of the ancient borough of Carlisle, that it is the safety of the prince, and the glory of the nation, as appears by their renowned address to King James II. Then we should see a new face of our nation, and Britain would no more be a naked nation, as it has formerly been; then we should have numerous and gallant armies surrounding a martial prince; ready to make the world, as well as his own subjects, tremble; then our inland counties would appear full of royal fortifications, citadels, forts, and strong towns; the beauty of the kingdom, and awe of factious rebels: it is a strange thing that this refractory people of ours could never be made sensible how much it is for the glory and safety of this nation that we should be put into a posture of defence against ourselves: it has been often alleged, that this nation can never be ruined but with their own consent: if then we are our own enemies, is it not highly requisite that we should be put in a position to have our own ruin prevented? And that since it is apparent we are no more fit to be trusted with our own liberties, having a natural and a national propensity to destroy and undo ourselves, and may be brought to consent to our own ruin, we should have such princes as for the future know how to restrain us, and how reasonable is it to allow them forces to do so?

We might enlarge here upon the great and certain advantages of this best of governments, a standing army; we might go back to the Persian, Grecian, and Roman empires, which had never arrived to such a pitch of glory if the people and nations whom they subdued had been able to nose them with such trifles as what we call constitution, national right, ancient privileges, and the like; we might descend also to particular advantages of government, which it is hoped we may attain to in Britain when the pretender arrives, some of which are grown obsolete, and out of use, by custom, and long possession of those troublesome things called liberties; among these may be reckoned,

1. The whole kingdom will be at once eased of that ridiculous feather-cap's expense of militia and trained-bands, which serve for little else but to justify the picking the peoples' pockets, with an annual tax of trophy-money, and every now and then putting the city of London and parts adjacent, to ten thousand pound charge, to beat drums, and shoot muskets, for nothing ; when, on the contrary, you shall in the blessed revolution we now invite you to, have all this done gratis, by the standing troops kept constantly in pay ; and your lieutenancy may lay down their commissions among the rest of non-significants of the nation.

2. You shall be for ever out of danger of being ridden again by the mob, your meeting-houses shall no more be the subject of the enraged rabbles ; nor shall the bank of England desire the drums to beat at midnight to raise a guard for Grocers' hall ; your new monarch will suffer none to insult or plunder the city but himself ; and as the city itself shall never want soldiers, (how should it, when the whole kingdom shall become a garrison ?) the money in the bank shall always be defended by a strong guard, who shall, whenever there is any danger of its being too safe, convey it, for its eminent security, from Grocers'-alley to the Tower, or to the exchequer, where it shall not fail to be kept for the advantage of the public.

3. Again ; upon this happy change we shall immediately be delivered from that most infamous practice of stock-jobbing, of which so much has been said to so little purpose ; for the funds being turned all into one general stock, and the prince being himself your security, you may even write upon all your companies this general phrase, viz., No transfer, as they do when the books are shut up at the bank, or East-India house ; so as all the rivers of water are swallowed up in the sea, as one ocean, to which they are all tending, so all these petty cheats will be engulfed at once in the general ocean of state trick, and the Exchange-alley men may justly be said to buy the bear-skin ever after.

4. When (which is a blessing we fear we cannot hope for before) we may expect to be delivered from the throng of virulent and contumacious libels which now infest our streets ; and the libellers themselves being most exemplarily punished, for a terror to the rest, will not dare to affront the government with ballads and balderdash ; if an impudent fellow

dares lift up his pen against the authority and power of his prince, he shall instantly feel the weight of that power to crush him, which he ought before to have feared; and pamphleteers shall then not be whipped and pilloried, but hanged; and when two or three of them have suffered that way, it is hoped those wholesome severities may put an effectual stop to the noise and clamour they now make in the nation; above all, the hands of the government will then be set free from the fetters of law; and it shall not be always necessary for the ministers of state to proceed by all the forms of the courts of justice, in such cases, by which the scribblers of the age pretend to stand it out against the government, and put their own construction upon their libels. But when these happy days arrive, juries and judges shall find and determine in these and all other cases, bring verdicts, and give sentence, as the prince in his royal justice shall direct.

We might enter here upon a long list of other happy circumstances we shall all arrive to, and of great advantages not here named, which the coming in of the pretender shall infallibly bring us to the enjoyment of, particularly in matters of religion, civil right, property, and commerce; but the needful brevity of this tract will not admit of it, we shall only add one thing more, which gives weight to all the rest, viz., that the certainty of these things, and of their being the natural consequences of the bringing in the pretender, adds to the certain felicity of that reign. This sums up the happiness of the pretender's reign; we need not talk of security, as the Review has done, and pretend he is not able to give us security for the performance of anything he promises; every man that has any sense of the principles, honour, and justice of the pretender, his zeal for the Roman catholic cause, his gratitude to his benefactor, the French king, and his love to the glory and happiness of his native country, must rest satisfied of his punctually performing all these great things for us; to ask him security, would be not to affront him only, but to affront the whole nation; no man can doubt him; the nature of the thing allows that he must do us all that kindness; he cannot be true to his own reason without it; wherefore this treaty executes itself, and appears so rational to believe, that whoever doubts it may be supposed to doubt even the veracity of James the Just.

What unaccountable folly then must those people be guilty of, who stand so much in the way of their own and their country's happiness, as to oppose, or pretend to argue against, the receiving this glorious prince, and would be for having Dutch men and foreigners forsooth to come, and all under the notion of their being protestants? To avoid and detect which fallacy, we shall in our next essay enter into the examination of the religion and orthodox principles of the person of the pretender, and doubt not to make it out, for the satisfaction of all tender consciences, that he is a true protestant of the church of England, established by law, and that in the very natural primitive sense of that phrase as it was used by his royal predecessor, of famous and pious memory, Charles II.—and as such, no doubt, he will endeavour for the recovery of the crown, which crown, if he obtains it, you see what glorious things he may do for himself, and us.

Quam si non tenuit magnis tamen excidit ausis.
